The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

GUIDELINES FOR TERM PAPER

The procedure for writing a term paper may consists of the following steps:

- Choosing a subject
- Finding sources of materials
- Collecting the notes
- Outlining the paper
- Writing the first draft
- Editing & preparing the final paper

1. Choosing a Subject

The subject chosen should not be too general.

2. Finding Sources of materials

- m) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- n) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- o) The sources could be books and magazines articles, news stories, periodicals, scientific journals etc.

3. Collecting the notes

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- m) Get facts, not just opinions. Compare the facts with author's conclusion.
- n) In research studies, notice the methods and procedures, results & conclusions.
- o) Check cross references.

4. Outlining the paper

- i) Review notes to find main sub-divisions of the subject.
- j) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

5. Writing the first draft

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- a) statement of purpose
- b) main body of the paper
- c) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main ideas.

6. Editing & Preparing the final Paper

- y) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information/details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.
- z) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- aa) Check for proper spelling, phrasing and sentence construction.
- bb) Check for proper form on footnotes, quotes, and punctuation.
- cc) Check to see that quotations serve one of the following purposes:
 - (xiii) Show evidence of what an author has said.
 - (xiv) Avoid misrepresentation through restatement.
 - (xv) Save unnecessary writing when ideas have been well expressed by the original author.
- dd) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- Title page
- Table of contents
- Introduction
- Review
- Discussion & Conclusion
- References
- Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

Discussion

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

Conclusion

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- q) summary of question posed
- r) summary of findings
- s) summary of main limitations of the study at hand
- t) details of possibilities for related future research

References

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

Bibliographical conventions

Monographs

Crystal, D. (2001), Language and the internet. Cambridge: Cambridge University Press.

Edited Volumes

Gass, S./Neu, J. (eds.) (1996), Speech acts across cultures. Challenges to communication in a second language. Berlin/ NY: Mouton de Gruyter.

[(eds.) is used when there is more than one editor; and (ed.) where there is only one editor. In German the abbreviation used is (Hrsg.) for Herausgeber].

Edited Articles

Schmidt, R./Shimura, A./Wang, Z./Jeong, H. (1996), Suggestions to buy: Television commercials from the U.S., Japan, China, and Korea. In: Gass, S./Neu, J. (eds.) (1996), Speech acts across cultures. Challenges to communication in a second language. Berlin/ NY: Mouton de Gruyter: 285-316.

Journal Articles

McQuarrie, E.F./Mick, D.G. (1992), On resonance: A critical pluralistic inquiry into advertising rhetoric. Journal of consumer research 19, 180-197.

Appendix

The appendix should be used for data collected (e.g. questionnaires, transcripts,...) and for tables and graphs not included in the main text due to their subsidiary nature or to space constraints in the main text.

Assessment Scheme:

Continuous Evaluation:

40%

(Based on abstract writing, interim draft, general approach, research orientation, readings undertaken etc.)

Final Evaluation:

60%

(Based on the organization of the paper, objectives/ problem profile/ issue outlining, comprehensiveness of the research, flow of the idea/ ideas, relevance of material used/ presented, outcomes vs. objectives, presentation/ viva etc.)

PROJECT

Course Code: BTE2732

Credit Units: 02

Objectives:

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

Chapter Scheme and distribution of marks:

Chapter 1: Introduction – 10 marks

Chapter 2: Conceptual Framework/ National/International Scenario – 25 marks

Chapter 3: Presentation, Analysis & Findings -- 25 marks

Chapter 4: Conclusion & Recommendations -- 10 marks

Chapter 5: Bibliography -- 05 marks

Project Report	Power Point Presentation & Viva
75 marks	25 marks

Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

1) Cover Page: This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.

2) Acknowledgement: Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.

3) Table of Content: Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

4) Body of the Report: The body of the report should have these four logical divisions

a) **Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.

b) **Conceptual Framework / National and International Scenario:** (relating to the topic of the Project).

c) **Presentation of Data, Analysis and Findings:** (using the tools and techniques mentioned in the methodology).

d) **Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.

5) Bibliography or References: This section will include the list of books and articles which have been used in the project work, and in writing a project report.

6) Annexures: Questionnaires (if any), relevant reports, etc.

(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

The Steps of a Project Report

Step I : Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.
- Relevance of the topic
- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

Step II : Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

Step III : Collection of information and data relating to the topic and analysis of the same.

Step IV: Writing the report dividing it into suitable chapters, viz.,

Chapter 1: Introduction,

Chapter 2: Conceptual Framework / National & International Scenario,

Chapter 3: Analysis & Findings

Chapter 4: Conclusion and Recommendations.

Step V: The following documents are to be attached with the Final Project Report.

1) Approval letter from the supervisor (Annexure-IA)

2) Student's declaration (Annexure-IB)

3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

Guidelines for Evaluation:

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.

WORKSHOP / CERTIFICATION

Course Code: BTE2733

Credit Units: 02

Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two way. The trainer has to make sure that the aspect covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

Accounting

Finance

Human Resources

Marketing

Economics

Operations

Supply Chain Management

These themes are merely indicative and other recent and relevant topics of study may be included.

Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

Relevant study material and references will be provided by the trainer in advance.

The participants are expected to explore the topic in advance and take active part in the discussions held

Attending and Participating in all activities of the workshop

Group Activities have to be undertaken by students as guided by the trainer.

Evaluation of workshop activities would be done through test and quiz at the end of the workshop.

Submitting a write up of at least 500 words about the learning outcome from the workshop.

Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

Case Study

Business Game

Simulation

Group Activity

Role Play

Business Planning

Quiz

Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

PROJECT/ DISSERTATION

Course Code: BTE2837

Credit Units: 17

Course Objective:

The students are expected to utilize their scheduled periods by undertaking the project that would be completed during the semester

Every student shall undertake a major Project. The major Project shall be undertaken in some biotechnology industry or laboratory of repute. Each student shall be assigned to a faculty who shall continuously monitor the progress of the Project in the concerned laboratory or industry. The faculty, in consultation with the concerned scientist of the industry/laboratory, shall decide the topic of the project. At the conclusion of the project the student shall submit a seminar and a dissertation. The dissertation shall be evaluated by the internal faculty/examiner. The student then shall have to appear for the viva voce examination.

GUIDELINES FOR PROJECT FILE

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critiqued by the faculty guide and corrected by the student at each stage.

The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

In general, the File should be comprehensive and include

- A short account of the activities that were undertaken as part of the project;
- A statement about the extent to which the project has achieved its stated goals.
- A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;
- Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;
- Any problems that have arisen that may be useful to document for future reference.

Report Layout

The report should contain the following components:

➤ Title or Cover Page

The title page should contain the following information: Project Title; Student's Name; Course; Year; Supervisor's Name.

➤ Acknowledgements (optional)

Acknowledgment to any advisory or financial assistance received in the course of work may be given.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

➤ **Abstract**

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project

➤ **Table of Contents**

Titles and subtitles are to correspond exactly with those in the text.

➤ **Introduction**

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

➤ **Materials and Methods**

This section should aim at experimental designs, materials used. Methodology should be mentioned in details including modifications if any.

➤ **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing these section, emphasis should be given on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

➤ Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary never write in "point" form.

➤ **Conclusion**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

➤ **Future prospects**

➤ **Appendices**

The Appendix contains material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

➤ **References / Bibliography**

This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

Examples

For research article

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infect*, 8 (suppl 1): 116–117.

For book

Kowalski, M.(1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), 7: 63-67

ASSESSMENT OF THE PROJECT FILE

Essentially, marking will be based on the following criteria: the quality of the report, the technical merit of the project and the project execution.

Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project.

Project execution is concerned with assessing how much work has been put in.

The File should fulfill the following *assessment objectives*:

Range of Research Methods used to obtain information

Execution of Research

Data Analysis

Analyse Quantitative/ Qualitative information

Control Quality

Draw Conclusions

Examination Scheme:

Dissertation: 100

Viva Voce: 100

Total: 200

MICROBIOLOGY LAB

Course Code: BTH4109

Credit Units: 02

Course Objectives

The objective of this laboratory course is to provide practical skills on basic microbiological techniques

Learning Outcomes

- Students should be able to:
- Isolate, characterize and identify common bacterial organisms;
- Determine bacterial load of different samples;
- Perform antimicrobial sensitivity tests;
- Preserve bacterial cultures

Course Contents:

Sterilization, disinfection and safety in microbiological laboratory.

Preparation of media for cultivation of bacteria.

Isolation of bacteria in pure culture by streak plate method.

Study of colony and growth characteristics of some common bacteria:

Bacillus, E. coli, Staphylococcus, Streptococcus, etc.

Preparation of bacterial smear and Gram's staining.

Enumeration of bacteria: standard plate count.

Antimicrobial sensitivity test and demonstration of drug resistance.

Maintenance of stock cultures: slants, stabs and glycerol stock cultures

Determination of phenol co-efficient of antimicrobial agents.

Determination of Minimum Inhibitory Concentration (MIC)

BIOCHEMISTRY & ANALYTICAL TECHNIQUES LAB

Course Code: BTH4115

Credit Units: 04

Course Objectives

The objective of this laboratory course is to introduce students to experiments in biochemistry. The course is designed to teach students the utility of set of experimental methods in biochemistry in a problem oriented manner.

Learning Outcomes

On completion of this course, students should be able to:

To elaborate concepts of biochemistry with easy to run experiments;

To familiarize with basic laboratory instruments and understand the principle of measurements using those instruments with experiments in biochemistry.

Course Contents:

Preparing various stock solutions and working solutions that will be needed for the course.

To prepare an Acetic-Na Acetate Buffer and validate the Henderson-Hasselbach equation.

To determine an unknown protein concentration by plotting a standard graph of BSA using UV-Vis Spectrophotometer and validating the Beer- Lambert's Law.

Titration of Amino Acids and separation of aliphatic, aromatic and polar amino acids by thin layer chromatography.

Purification and characterization of an enzyme from a recombinant source (such as Alkaline Phosphatase or Lactate Dehydrogenase or any enzyme of the institution's choice).

Preparation of cell-free lysates

Ammonium Sulfate precipitation

Ion-exchange Chromatography

Gel Filtration

Affinity Chromatography

Dialysis of the purified protein solution against 60% glycerol as a demonstration of storage method
Generating a Purification Table (protein concentration, amount of total protein; Computing specific activity of the enzyme preparation at each stage of purification)

Assessing purity of samples from each step of purification by SDS-PAGE Gel Electrophoresis

Enzyme Kinetic Parameters: K_m , V_{max} and K_{cat}

Experimental verification that absorption at OD₂₆₀ is more for denatured DNAs compared to native double stranded DNA. reversal of the same following DNA renaturation. Kinetics of DNA renaturation as a function of DNA size.

Identification of an unknown sample as DNA, RNA or protein using available laboratory tools. (Optional Experiments)

Biophysical methods (Circular Dichroism Spectroscopy, Fluorescence Spectroscopy).

Determination of mass of small molecules and fragmentation patterns by Mass Spectrometry.

PLANT AND ANIMAL BIOTECHNOLOGY LAB

Course Code: BTH4116

Credit Units: 04

Course Objectives

The objectives of this course are to provide hands-on training in basic experiments of plant and animal biotechnology.

Learning Outcomes

On completion of course, students should be able to gain basic skills in plant and animal biotechnology.

Course Contents:

Plant Biotechnology

Prepare culture media with various supplements for plant tissue culture.

Prepare explants of *Valleriana wallichii* for inoculation under aseptic conditions.

Attempt in vitro andro and gynogenesis in plants (*Datura stramonium*).

Isolate plant protoplast by enzymatic and mechanical methods and attempt fusion by PEG (available material).

Culture *Agrobacterium tumefaciens* and attempt transformation of any dicot species.

Generate an RAPD and ISSR profile of *Eremurus persicus* and *Valleriana wallichii*.

Prepare karyotypes and study the morphology of somatic chromosomes of *Allium cepa*, *A. sativum*, *A. tuberosum* and compare them on the basis of karyotypes.

Pollen mother cell meiosis and recombination index of select species

(one achiasmate, and the other chiasmate) and correlate with generation of variation.

Undertake plant genomic DNA isolation by CTAB method and its quantitation by visual as well as spectrophotometric methods.

Perform PCR amplification of 'n' number of genotypes of a species for studying the genetic variation among the individuals of a species using random primers.

Study genetic fingerprinting profiles of plants and calculate polymorphic information content.

Syllabus

Animal Biotechnology

Count cells of an animal tissue and check their viability.

Prepare culture media with various supplements for plant and animal tissue culture.

Prepare single cell suspension from spleen and thymus.

Monitor and measure doubling time of animal cells.

Chromosome preparations from cultured animal cells.

Isolate DNA from animal tissue by SDS method.

Attempt animal cell fusion using PEG

RESEARCH METHODOLOGY AND SCIENTIFIC COMMUNICATION SKILLS

Course Code: BTH4214

Credit Units: 02

Course Objectives

The objectives of this course are to give background on history of science, emphasizing methodologies used to do research, use framework of these

Learning Outcomes

Students should be able to: Understand history and methodologies of scientific research, applying these to recent published papers; Understand and practice scientific reading, writing and presentations; Appreciate scientific ethics through case studies

Course Contents:

Module 1 History of science and science methodologies

Empirical science; scientific method; manipulative experiments and controls; deductive and inductive reasoning; descriptive science; reductionist vs holistic biology.

Module 2 Preparation for research

Choosing a mentor, lab and research question; maintaining a lab notebook

Module 3 Process of communication

Concept of effective communication- setting clear goals for communication; determining outcomes and results; initiating communication; avoiding breakdowns while communicating; creating value in conversation; barriers to effective communication; non-verbal communication- interpreting non-verbal cues; importance of body language, power of effective listening; recognizing cultural differences; Presentation skills- formal presentation skills; preparing and presenting using over-head projector, PowerPoint; defending interrogation; scientific poster preparation & presentation; participating in group discussions; Computing skills for scientific research - web browsing for information search; search engines and their mechanism of searching; hidden Web and its importance in scientific research; internet as a medium of interaction between scientists; effective email strategy using the right tone and conciseness.

Module 4 Scientific communication

Technical writing skills - types of reports; layout of a formal report; scientific writing skills - importance of communicating science; problems while writing a scientific document; plagiarism, software for plagiarism; scientific publication writing: elements of a scientific paper including abstract, introduction, materials & methods, results, discussion, references; drafting titles and framing abstracts; publishing scientific papers- peer review process and problems, recent developments such as open access and non-blind review; plagiarism; characteristics of effective technical communication; scientific presentations; ethical issues; scientific misconduct

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

BIO-ENTREPRENEURSHIP, INTELLECTUAL PROPERTY RIGHTS, BIOSAFETY AND BIOETHICS

Course Code: BTH4306

Credit Units: 03

Course Objectives

Bio-entrepreneurship, an interdisciplinary course, revolves around the central theme of how to manage and develop life science companies and projects. The objectives of this course are to teach students about concepts of entrepreneurship including identifying a winning business opportunity, gathering funding and launching a business, growing and Nurturing the organization and harvesting the rewards.

The other objectives are To understand basic knowledge, policies, requirements, and laws of IPR, Biosafety, and Bio-ethics.

Learning Outcomes

Students should be able to gain entrepreneurial skills, understand the various operations involved in venture creation, identify scope for entrepreneurship in biosciences and utilize the schemes promoted through knowledge centres and various agencies. Understand the rationale for and against IPR and especially patents; Understand why India has adopted an IPR Policy and be familiar with broad outline of patent regulations; Understand different types of IPR.

Course Contents:

Module1 Innovation and entrepreneurship in bio-business

Introduction and scope in Bio-entrepreneurship, Types of bio-industries and competitive dynamics between the sub-industries of the bio sector (e.g. pharmaceuticals vs. Industrial biotech), Strategy and operations of bio-sector firms: Factors shaping opportunities for innovation and entrepreneurship in bio-sectors, and the business implications of those opportunities, Alternatives faced by emerging bio-firms and the relevant tools for strategic decision, Entrepreneurship development programs of public and private agencies (MSME, DBT, BIRAC, Make In India), strategic dimensions of patenting & commercialization strategies.

Module2 Bio markets - business strategy and marketing

Negotiating the road from lab to the market (strategies and processes of negotiation with financiers, government and regulatory authorities), Pricing strategy, Challenges in marketing in bio business (market conditions & segments; developing distribution channels, the nature, analysis and management of customer needs), Basic contract principles, different types of agreement and contract terms typically found in joint venture and development agreements, Dispute resolution skills.

Module3 Finance and accounting

Business plan preparation including statutory and legal requirements, Business feasibility study, financial management issues of procurement of capital and management of costs, Collaborations & partnership, Information technology.

Module4 Technology management

Technology—assessment, development & upgradation, Managing technology transfer, Quality control & transfer of foreign technologies, Knowledge centers and Technology transfer agencies, Understanding of regulatory compliances and procedures (CDSCO, NBA, GCP, GLA, GMP)

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module 5

Introduction to IPR

Introduction to intellectual property; types of IP: patents, trademarks, copyright & related rights, industrial design, traditional knowledge, geographical indications, protection of new GMOs; International framework for the protection of IP; IP as a factor in R&D; IP of relevance to biotechnology and few case studies; introduction to history of GATT, WTO, WIPO and TRIPS; plant variety protection and farmers rights act; concept of 'prior art': invention in context of "prior art"; patent databases - country-wise patent searches (USPTO, EPO, India); analysis and report formation.

Module 6 Patenting

Basics of patents: types of patents; Indian Patent Act 1970; recent amendments; WIPO Treaties; Budapest Treaty; Patent Cooperation Treaty (PCT) and implications; procedure for filing a PCT application; role of a Country Patent Office; filing of a patent application; precautions before patenting - disclosure/non-disclosure - patent application-forms and guidelines including those of National Bio-diversity Authority (NBA) and other regulatory bodies, fee structure, time frames; types of patent applications: provisional and complete specifications; PCT and conventional patent applications; international patenting - requirement, procedures and costs; financial assistance for patenting - introduction to existing schemes; publication of patents - gazette of India, status in Europe and US; patent infringement - meaning, scope, litigation, case studies and examples; commercialization of patented innovations; licensing - outright sale, licensing, royalty; patenting by research students and scientists - university/organizational rules in India and abroad, collaborative research - backward and forward IP; benefit/credit sharing among parties/community, commercial (financial) and non-commercial incentives.

Module 7 Biosafety

Biosafety and Biosecurity - introduction; historical background; introduction to biological safety cabinets; primary containment for biohazards; biosafety levels; GRAS organisms, biosafety levels of specific microorganisms; recommended biosafety levels for infectious agents and infected animals; definition of GMOs & LMOs; principles of safety assessment of transgenic plants - sequential steps in risk assessment; concepts of familiarity and substantial equivalence; risk - environmental risk assessment and food and feed safety assessment; problem formulation - protection goals, compilation of relevant information, risk characterization and development of an analysis plan; risk assessment of transgenic crops vs cisgenic plants or products derived from RNAi, genome editing tools.

Module 8 National and international regulations

International regulations - Cartagena protocol, OECD consensus documents and Codex Alimentarius; Indian regulations - EPA act and rules, guidance documents, regulatory framework - RCGM, GEAC, IBSC and other regulatory bodies; Draft bill of Biotechnology Regulatory authority of India - containments - biosafety levels and category of rDNA experiments; field trials - biosafety research trials - standard operating procedures - guidelines of state governments; GM labeling - Food Safety and Standards Authority of India (FSSAI).

Module 9 Bioethics

Introduction, ethical conflicts in biological sciences - interference with nature, bioethics in health care - patient confidentiality, informed consent, euthanasia, artificial reproductive technologies, prenatal diagnosis, genetic screening, gene therapy, transplantation. Bioethics in research - cloning and stem cell research, Human and

animal experimentation, animal rights/welfare, Agricultural biotechnology - Genetically engineered food, environmental risk, labeling and public opinion. Sharing benefits and protecting future generations - Protection of environment and biodiversity – biopiracy.

BIOPROCESS ENGINEERING & TECHNOLOGY LAB

Course Code: BTH4323

Credit Units: 03

Course Objectives

The objectives of this laboratory course are to provide hands-on training to students in upstream and downstream unit operations

Learning Outcomes

Students should be able to:

- Investigate, design and conduct experiments, analyze and interpret data, and apply the laboratory skills to solve complex bioprocess engineering problems; Apply skills and knowledge gained will be useful in solving problems typical of bio industries and research

Course Contents:

1. Basic Microbiology techniques
 - a) Scale up from frozen vial to agar plate to shake flask culture.
 - b) Instrumentation: Microplate reader, spectrophotometer, microscopy.
 - c) Isolation of microorganisms from soil samples.
2. Experimental set-up
 - a) Assembly of bioreactor and sterilization.
 - b) Growth kinetics.
 - c) Substrate and product inhibition.
 - d) Measurement of residual substrates.
3. Data Analysis
 - a) Introduction to Metabolic Flux Analysis (MFA).
4. Fermentation
 - a) Batch.
 - b) Fed-batch.
 - c) Continuous.
5. Unit operations
 - a) Micro filtration: Separation of cells from broth.
 - b) Bio separations: Various chromatographic techniques and extractions.
6. Bioanalytic
 - a) Analytical techniques like HPLC, FPLC, GC, GC-MS etc. for measurement of amounts of products/substrates.

BIOINFORMATICS LAB

Course Code: BTH4324

Credit Units: 03

Course Objectives

The aim of this course is to provide practical training in bioinformatic methods including accessing major public sequence databases, use of different computational tools to find sequences, analysis of protein and nucleic acid sequences by various software packages

Learning Outcomes

On completion of this course, students should be able to: Describe contents and properties of most important bioinformatics databases;

- Perform text- and sequence-based searches and analyze and discuss results in light of molecular biological knowledge;
- Explain major steps in pairwise and multiple sequence alignment, explain principle and execute pairwise sequence alignment by dynamic programming; Predict secondary and tertiary structures of protein sequences

Course Contents:

Using NCBI and Uniprot webresources.

Introduction and use of various genomedatabases.

Sequenceinformationresource:UsingNCBI,EMBL,Genbank,Entrez,Swissprot/ TrEMBL,UniProt.

SimilaritysearchesusingtoolslikeBLASTandinterpretationofresults.

Multiple sequence alignment usingClustalW.

Phylogenetic analysis of protein and nucleotidesequences.

Use of gene prediction methods (GRAIL, Genscan,Glimmer).

Using RNA structure predictiontools.

Use of various primer designing and restriction site predictiontools.

Use of different protein structure prediction databases (PDB,SCOP, CATH).

Construction and study of protein structures usingDeepview/PyMol.

Homology modelling ofproteins.

Useoftoolsformutationandanalysisoftheenergyminimizationof proteinstructures.

Use of miRNA prediction, designing and target predictiontools.

ENVIRONMENTAL BIOTECHNOLOGY

Course Code: BTH4204

Credit Units: 02

Course Objectives

This course aims to introduce fundamentals of Environmental Biotechnology. The course will introduce major groups of micro organisms tools in biotechnology and their most important environmental applications. The environmental applications of biotechnology will be presented in detail and will be supported by examples from the national and international literature.

Student Learning Outcomes

On completion of course, students will be able to understand use of basic microbiological, molecular and analytical methods, which are extensively used in environmental biotechnology.

Course Contents:

Module I: Introduction to environment.

Introduction to environment; pollution and its control; pollution indicators; waste management: domestic, industrial, solid and hazardous wastes; strain improvement; Biodiversity and its conservation; Role of microorganisms in geochemical cycles; microbial energy metabolism, microbial growth kinetics and elementary chemostat theory, relevant microbiological processes, microbial ecology.

Module II: Bioremediation

Bioremediation: Fundamentals, methods and strategies of application (biostimulation, bioaugmentation)—examples, bioremediation of metals (Cr, As, Se, Hg), radionuclides (U, Te), organic pollutants (PAHs, PCBs, Pesticides, TNT etc.), technological aspects of bioremediation (*in situ*, *ex situ*).

Module III: Role of microorganisms in bioremediation

Application of bacteria and fungi in bioremediation: White rot fungi vs specialized degrading bacteria: examples, uses and advantages vs disadvantages; Phytoremediation: Fundamentals and description of major methods of application (phytoaccumulation, phytovolatilization, rhizofiltration, phyto-stabilization).

Module IV: Biotechnology and agriculture

Bioinsecticides: *Bacillus thuringiensis*, Baculoviruses, uses, genetic modifications and aspects of safety in their use; Biofungicides: Description of mode of actions and mechanisms (e.g. *Trichoderma*, *Pseudomonas fluorescens*); Biofertilizers: Symbiotic systems between plants – microorganisms (nitrogen fixing symbiosis, mycorrhiza fungi symbiosis), Plant growth promoting rhizobacteria (PGPR) – uses, practical aspects and problems in application.

Module V: Biofuels

Environmental Biotechnology and biofuels: biogas; bioethanol; biodiesel; biohydrogen; Description of the industrial processes involved, microorganisms and biotechnological interventions for optimization of production; Microbiologically enhanced oil recovery (MEOR); Bioleaching of metals; Production of bioplastics; Production of biosurfactants: bioemulsifiers; Paper production: use of xylanases and white rot fungi.

VACCINES

Course Code: BTH4327

Credit Units: 02

Course Objectives

This course will provide students with an overview of current developments in different areas of vaccines.

Learning Outcomes

By the end of this course, students should be able to:

- Understand fundamental concepts of human immune system and basic immunology;
- Differentiate and understand immune responses in relation to infection and vaccination;
- Understand requirement and designing of different types of vaccines;
- Understand importance of conventional and new emerging vaccine technologies.

Course Contents:

Module 1 Fundamentals of immune system

Overview of Immune system; Human Immune system: Effectors of immune system; Innate & Adaptive Immunity; Activation of the Innate Immunity; Adaptive Immunity; T and B cells in adaptive immunity; Immune response in infection; Correlates of protection.

Module 2 Immune response to infection

Protective immune response in bacterial; viral and parasitic infections; Primary and Secondary immune responses during infection; Antigen presentation and Role of Antigen presenting cells: Dendritic cells in immune response; Innate immune response Humoral (antibody mediated) responses; Cell mediated responses: role of CD4+ and CD8+ T cells; Memory responses: Memory and effector T and B cells, Generation and Maintenance of memory T and B cells

Module 3 Immune response to vaccination

Vaccination and immune response; Adjuvants in Vaccination; Modulation of immune responses: Induction of Th1 and Th2 responses by using appropriate adjuvants and antigen delivery systems- Microbial adjuvants, Liposomal and Microparticles as delivery systems; Chemokines and cytokines; Role of soluble mediators in vaccination; Oral immunization and Mucosal Immunity.

Module 4 Vaccine types & Design

History of vaccines, Conventional vaccines; Bacterial vaccines; Viral Vaccines; Vaccines based on routes of administration: parenteral, oral, mucosal; Live attenuated and inactivated vaccine; Subunit Vaccines and Toxoids; Peptide Vaccine.

Module 5 Vaccine technologies

New Vaccine Technologies; Rationally designed Vaccines; DNA Vaccination; Mucosal vaccination; New approaches for vaccine delivery; Engineering virus vectors for vaccination; Vaccines for targeted delivery (Vaccine Delivery systems); Disease specific vaccine design: Tuberculosis Vaccine; Malaria Vaccine; HIV/AIDS vaccine; New emerging diseases and vaccine needs (Ebola, Zika).

RNA BIOLOGY

Course Code: BTH4219

Credit Units: 02

Course Objectives

- A) Learn basic tenets of RNA Biology
- B) Explore emerging topics in RNA Biology including CRISPR/Cas9, differential RNA processing and stability, RNA Epi-transcriptomics, and functions of diverse classes of non-coding RNAs

Learning Outcomes

On successful completion of this course, students should be able to This course will focus on recent research in RNA biology: differential RNA processing and stability (splicing, polyadenylation, and turnover), the functional significance of various classes of non-coding RNAs (microRNAs, lncRNAs, cRNAs, ceRNAs, eRNAs, etc...), the CRISPR/Cas9 system, and RNA epi-transcriptomics (RNA methylation and terminal uridylation). Class lectures and discussions will be predominantly.

Course Contents:

Module1 Introduction to RNA biology

Introduction to RNA Biology and the Course Objectives, RNA Processing and Turnover, RNA and Translation, RNA Editing, Modifications and the Epi-transcriptome. The functions of Noncoding RNAs; the Long and the Short of it.

Module2 RNA therapeutics

RNA-based approaches to target identification and validation: Microarray, miRNAs; RNAi and CRISPR functional screens

- 2. RNA Therapeutic approaches: Gene therapy issues, Antisense, Ribozymes
- 3. RNA Therapeutic approaches: Aptamers, Riboswitches
- 4. RNA Therapeutic approaches: RNAi
- 5. RNA Therapeutic approaches: CRISPR, Combination therapies, Nano-formulations
- 6. RNA Therapeutic Efficacy considerations: Chemical modifications, Delivery challenges

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

CANCER BIOLOGY

Course Code: BTH4328

Credit Units: 02

Course Objectives

The Cancer Biology elective course will provide knowledge of critical aspects in human cancer biology for better understanding of its development, diagnostics methods as well as clinical/experimental therapeutics available for cancer therapy.

This course provides students with a broad overview of diverse fields of oncology, covering historical perspectives to cutting-edge approaches. The course will span several aspects of cancer research including its genetics, molecular and cellular biology, cancer micro-environment and its physiology, as well as classical vs experimental therapies available for tumor treatment. This course should specially be appealing to students who are interested in studying cancer research for their future career paths.

Learning outcomes:

On completion of this course, students should be able to:

- Describe tumor progression and important 'hallmarks' of cancer
- Understanding of the molecular and cellular origins of cancer
- Key signaling pathways in cancer development and progression
- knowledge of current perspectives about cancer research and current therapies.

Course Contents:

Module1 Introduction

Cancer hallmarks, Carcinogenesis, Oncogenes and tumor viruses, Tumor suppressor genes.

Module2 Cancer signaling

Signal transduction programs in cancer, De-regulation of the cell cycle/cell growth in cancer, Genomic instability and DNA repair in cancer, Apoptosis (p53), autophagy and cancer metabolism

Module3 Cell biology of cancer

The cancer microenvironment – hypoxia, inflammation, angiogenesis and stromal-cancer interactions, Invasion and Metastasis.

Module4 Diagnostics of cancer

Tumor immunology and immunotherapy, Cancer diagnostics – biomarkers, Cancer therapies, Translational research

MACHINE LEARNING-I

Course Code: DSC4102

Credit Units-03

Course Contents:

Module 1: An Introduction to Machine Learning:

Introduction to machine learning, What is ML, Types of ML, Applications used for ML, AI vs ML, Essential for ML and AI.

Module 2: Techniques of Machine Learning:

Introduction to Supervised, unsupervised, semi-supervised, and reinforced machine learning techniques

Module 3: Introduction to Supervised Learning:

Training, validation, test data, and Over fitting and complexity

Module 4: Managing and understanding data:

Data description, Data processing, Dimension Reduction.

Module 5: Data Preprocessing:

Comprehend the meaning, process, and importance of data preparation, feature engineering and scaling of datasets.

Module 6: Evaluating model performance:

Measures performance for the classification problem. Discuss different performance measures.

Module 7: Resampling methods:

Discuss different cross validation techniques. Leave-One-Out Cross-Validation, k-Fold Cross Validation

Examination Scheme:

STATISTICS & EXPLORATORY DATA ANALYSIS

Course Code: DSC4103

Credit Units-03

Course Contents:

Module 1: Descriptive Statistics

Statistics: Preliminary concepts; Measures of Central Tendency: Mean, Median, Mode

Measures of Dispersion: Range, Standard deviation, Variance, Covariance, Graphical Representation of Statistics: Histograms, Bar plots, Scatter plots etc.

Module 2: Probability

Random Experiments, Trial and Event, Sample Space, Mutually Exclusive or Disjoint Events, Mutually Exhaustive Events, Equally Probable Events, Complementary Event, Classical definition of Probability, Statistical definition of Probability, Axiomatic definition of Probability, Addition theorem, Multiplication theorem, Conditional Probability, Bayes' Theorem. Expectation.

Module 3: Continuous Distribution

Normal Distribution, Properties of Normal distribution

Module 4: Correlation

Bivariate distribution Correlation, Types of Correlation, Simple Correlation Coefficient for ungrouped data, Properties and Interpretation of Correlation Coefficient, Coefficient of determination, Scatter diagram, Standard Error, Probable error of Correlation Coefficient. Rank correlation, Some examples.

Module 5: Introduction to the Inferential Statistics

Parameter, Statistic, Null hypothesis, Alternative hypothesis, Critical region, Type1 Error, Type 11 Error, Level of significance, P-value and its applications.

Test of Significance for Small samples: One sample t-test, Paired t-test, Degrees of freedom for t-test, F test for equality of Population variances, Degrees of freedom for F-test.

Test of Significance for Large samples: Normal test for sample mean and population mean, Normal test for two sample means.

Chi-square Test: Test of goodness of fit, Test of Independence of attributes, Degrees of freedom for Chisquare test, Coefficient of contingency, Yates' correction for continuity.

Analysis of Variance: One way and Two way (only Examples)

Module 6: Introduction to Model Building:

Basics of Model building, Definition of a Model, Point estimation, Confidence intervals, Testing

DATABASE MANAGEMENT SYSTEM-I

Course Code: DSC4104

Credit Units-02

Course Contents:

- SQL (Structured Query Language)
- Data Definition Language (DDL): Create, Alter and Drop commands
- Data Manipulation Language (DML): Select, Insert, Update, and Delete commands, Basic SQL queries, Integrity constraints on tables,
- Data Control Language Commands(DCL): Grant and Revoke
- SQL Functions
- SQL querying to do operations such as identifying nulls, special characters, blank rows/columns, and run distributions, run data summaries, merge tables, get unique counts
- SQL Joins, Aggregate functions and GROUP BY, Nested queries and sub queries. GROUP BY CLAUSE along basic aggregations such as SUM, COUNT, AVG RANK(), ROWNUM() & DENSE_RANK. UNION and UNION ALL CASE statement
- Introduction to Advanced SQL concepts: Indexes, Sequence, Clusters, Views, Cursors and Triggers, Embedded SQL
- Introduction to SQLITE
- Introduction to NoSQL and its capabilities
- Contrast MySQL with NOSQL
- Introduction to SQLITE
- Introduction to POSTGRESQL

Examination Scheme:

PROGRAMMING TOOL BOX I-R

Course Code: DSC4105

Credit Units-01

Course Contents:

Module 1: An Introduction to R

Overview of R programming, applications, usage and comparative study with other softwares and introduction to R for Data Science

Module 2: Setting up R environment and packages

Setting up R environment and install packages and supporting libraries in R

Module 3: Basics of R

Manage your data and work-space, Save your work, How to use R, Data structure in R, Data creation and curation and special function using R

Module 4: File Handling

Reading different file format using R, file handling and processing, writing output file.

Module 5: Graphics using R

Graphics device, Basic plot function, scatter plot, 3-D scatter plot, pairplots, Lineplot, Matplot, Matpoints, Bar plot, Histogram plot, Density plot, Dot plot, Pie chart, Venn diagram, Grid graphics, Lattice, ggplot2, Interactive plotting, combine multiple plots in same graphics screen, save graphics to a file.

Module 6: Programming using R

Conditional Executions, Comparison Operators, Logical Operators, Control Structures, If statements, Ifelse statements, Loops, For loop, While loop, Apply loop family, Other loops,

Module 7: Functions

Define and Call functions, Syntax Rules for functions, Control utilities for functions, Writing own function

Module 8: Advance R

Advance R functions and Regular expressions, Object oriented programming, Building R package

Module 9: Case study

PROGRAMMING TOOL BOX II-PYTHON

Course Code: DSC4106

Credit Units-01

Course Contents:

Python Programming

Module 1: Introduction to Python :

Overview of Python, applications, usage and comparative study with other softwares.

Module 2: Basics of Python :

Syntax, Data Types, Variables, Operators, Input/output, Flow of Control (Modules, Branching)

Module 3: Basic Programming with Python :

If, If- else, Nested if-else, Looping, For, While, Nested loops, Control Structure, Break, Continue, Pass,

Module 4: Data Structures of Python :

Strings and Tuples, Accessing Strings, Basic Operations, String slices, Working with Lists, Introduction, Accessing list, Operations, Function and Methods, Files, Modules, Dictionaries, Functions and Functional Programming, Declaring and calling Functions, Declare, assign and retrieve values from Lists, Introducing Tuples, Accessing tuples

Module 5: Advanced Python :

Object Oriented, OOPs concept, Class and object, Attributes, Inheritance, Overloading, Overriding, Data hiding, Operations Exception, Exception Handling, Except clause, Try finally clause, User Defined Exceptions

Module 6: Python Libraries :

Introduction to Machine learning packages like NUMPY, SCIPY, PANDAS etc.

Examination Scheme:

BIG DATA TOOLS & TECHNOLOGIES-I

Course Code: DSC4107

Credit Units-01

Course Contents:

Module 1: Introduction to Big Data

Big Data and its Importance, V's of Big Data, Drivers for Big Data, Introduction to Big Data Analytics, Big Data Analytics applications.

Module 2: Introduction to Hadoop

Hadoop Introduction, Hadoop key characteristics, Hadoop Core Components, Hadoop Ecosystem, Hadoop Services, Different Hadoop Modes, Hadoop's Parallel World – Data discovery

Module 3: Understanding Hadoop

Hadoop Installation, Hadoop Cluster Setup, Storing Data in Hadoop, HDFS Commands (Basics, Intermediate and Advanced), Processing your data with Map Reduce, Customizing Map Reduce Execution, Building Reliable MapReduce Apps, Run test example using Map reduce, Distributed Cache, Map side join vs Reduce Side Join, Running Hadoop applications

Module 4: Processing Big Data

Integrating disparate data stores, Mapping data to the programming framework, Connecting and extracting data from storage, Transforming data for processing, Subdividing data in preparation for Hadoop Map Reduce.

Module 5: Hadoop Map Reduce

Employing Hadoop Map Reduce, Creating the components of Hadoop Map Reduce jobs, Distributing data processing across server farms, Executing Hadoop Map Reduce jobs, Monitoring the progress of job flows, The Building Blocks of Hadoop Map Reduce, Distinguishing Hadoop daemons, Investigating the Hadoop Distributed File System Selecting appropriate execution modes: local, pseudo-distributed, fully distributed.

INTRODUCTION TO LINUX

Course Code: DSC4108

Credit Units-01

Course Contents:

Module 1: Operating System:

Introduction: Windows and Unix/Linux, Definition; Concepts; Function of Operating System; Batch Processing; Multiprogrammed Batch System; Time Sharing System; Parallel System; Distributed System; Real Time System.

Module 2: Process & Memory Management:

Process; Process State(New, Running, Waiting, Ready, Termination); Process Control Block; Process Scheduling (Round Robin Scheduling, Priority Scheduling, Multiple Queues, Shortest Job Scheduling); Operations on Process; Basic Management of Memory; Swapping Virtual Memory; Paging.

Module 3: Input/Output Management:

I/O Devices; Device Controllers; I/O Software; Device Drivers; Deadlock; Resources; Principles of Dead Lock; Detection and Recovery; Deadlock Prevention; Deadlock Avoidance.

Module 4: UNIX/LINUX Operating Systems:

Introduction; Concepts; Layers of UNIX; Role of System Administrator and Ordinary User; Tree Structure of UNIX; Root File System; /bin Directory; /dev Directory; /etc Directory; /lib Directory; /proc Directory; /mnt Directory; /root Directory; /sbin Directory; /tmp Directory; /var Directory; Relative Path; Absolute Path; Creation of Directory; Creating file; removing file; Listing Files and Directories copying file; renaming file; Changing File Permission; Changing Director Permission; Changing Group; Changing Owner; Pipe; Filters; pwd command; date command; head command; tail command less command; more command; grep command; VI Editor (Creating a new File; Inserting Text in File; Deleting Text in File; Copy , Cut & Paste Text; Save File).

Module 5: Shell Programming:

Variables(Configuration Variable & Environmental Variable); Operators(Arithmetic Operator, Logical Operator, Relational Operator); Instruction(Sequence Control Instruction, Selection Control Instruction, Repetition or Loop Instruction); echo command; read command; outtput command.

Module 6: System Monitoring:

System monitoring, process information, log files, run level, system recovery, Memory management

Examination Scheme:

IA			EE

MACHINE LEARNING-I LAB

Course Code: DSC4109

Credit Units-01

Course Contents:

Module 1: Supervised Learning:

Splitting the data into Training and test data, Understanding Overfitting and complexity with case studies

Module 2: Managing and understanding data:

Understanding Data description, Data processing, Dimension Reduction through case studies

Module 3: Data Preprocessing:

Understanding data preparation, feature engineering and scaling, datasets, dimensionality reduction through case studies

Module 4: Evaluating model performance: Calculation of Measures performance for the classification problem.

Module 5: Cross Validation techniques: Case studies of Leave-One-Out Cross-Validation, k-Fold Cross Validation and other cross validation techniques

Examination Scheme:

STATISTICS & EXPLORATORY DATA ANALYSIS LAB

Course Code: DSC4110

Credit Units-01

Course Contents:

Module 1: Descriptive Statistics

Calculation and interpretation of Descriptive Statistics

Module 2: Probability

Understanding the preliminary concepts of probability through case studies

Module 3: Continuous Distribution

Generation of statistical distributions

Module 4: Correlation

Calculation of correlation understanding and interpreting correlation through case studies

Module 5: Introduction to the Inferential Statistics

Understanding inferential statistics through case studies

Module 6: Introduction to Model Building:

Understanding Basics of Model building, Definition of a Model, Point estimation, Confidence intervals, Testing through case studies

Examination Scheme:

MACHINE LEARNING-II

Course Code: DSC4201

Credit Units-03

Course Contents:

Module 1: Basic concepts to calculate distance and similarities

Discuss different methods to calculate distance and similarities including euclidean distance, squared euclidean distance, Manhattan distance, Cosine distance, Chebyshev distance, Canberra distance, Minikowski distance, correlation distance, partial correlation distance, mutual information and rank correlation coefficients

Module 2: Introduction to unsupervised learning

Discuss theory and concepts behind unsupervised learning

Module 3: Clustering:

Finding grouping of data. Hierarchical clustering, k-means and K-medoid clustering algorithm

Module 4: Application to Machine Learning:

Classification using Nearest Neighbors, Naive Bayes, Support Vector Machine, Market basket analysis using Association Rules

Module 5: Case study

Solve a case study on real world data and apply machine learning concepts.

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

REGRESSION THEORY & ANALYSIS

Course Code: DSC4202

Credit Units-03

Course Contents:

Module 1: Simple linear regression: Estimation of the Parameters, Hypothesis Testing on the Slope and Intercept, Interval Estimation in Simple Linear Regression, Prediction of New Observations, Coefficient of Determination

Module 2: Multiple regression: Estimation of Parameters, Hypothesis Testing, Confidence Intervals, Prediction

Module 3: Model Adequacy testing: Residual Analysis, PRESS statistic, Lack of Fit

Module 4: Transformations: Variance stabilising transformations, Transformations to linearise the model, Methods to select a transformation, Weighted least squares, Regression and random effect

Module 5: Multicollinearity: Sources, Effects, Diagnostics, Methods of dealing with Multicollinearity

Module 6: Validation of regression models: Techniques for validation

Module 7: Introduction to non linear regression and GLM: Non linear least squares, Transformations, Parameter estimation, Logistic and poisson regression

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

DATABASE MANAGEMENT SYSTEM-II

Course Code: DSC4204

Credit Units-02

Course Contents:

Module 1: MongoDB

A Database for the internet, MongoDB's key features, MongoDB's core server and tools, Why MongoDB? , History of MongoDB, Diving into the MongoDB shell, Creating and Querying with indexes, Basic Administration, Writing Program using MongoDB

Module 2: Application Development in MongoDB

Document oriented data, Constructing queries, Aggregation, Update ,atomic operations and deletes, E-commerce updates, Atomic document processing

Module 3: MongoDB Mastery

Indexing and query optimization, Text Search, Wired Tiger and pluggable storage, Replication, Scaling your system with Sharding, Deployment and Administration

Module 4: Apache Cassandra

Big Data and Apache Cassandra, Importance of Cassandra, Cassandra as a Distributed Database, Cassandra and High Availability, Cassandra and Replication Mechanism, Cassandra's Elastic Scalability, Tune able consistency (Strict Consistency , Casual Consistency , Weak Consistency , Brewer's CAP Theorem ,Cassandra as a Schema Free Database, Where should we use Cassandra , Who and why using the Cassandra

Examination Scheme:

SPARK

Course Code: DSC4205

Credit Units-01

Course Contents:

Module 1: Introduction to Apache Spark

Introduction to Apache Spark, Features of Apache Spark, Apache Spark Stack, Introduction to RDD's, RDD's Transformation, What is good and Bad in Map Reduce , Why to use Apache Spark

Module 2: Spark: A Hadoop Replacement?

Java, Scala, or Python? , Scala, Packages, Data Types, Classes, Calling Functions, Operators, Control Structures

Module 3: A Quick Intro to Spark

Starting the shell, Data Sources, Testing Spark, Spark Monitor, Comparing Hadoop Map Reduce to Spark, Writing Standalone program with Spark

Module 4: Spark SQL

Basic Concepts, Using Spark SQL with RDDs

Module 5: Spark Streaming

Basic Concepts, Creating Your First Stream with Scala, Creating Your First Stream with Java

Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

DATA VISUALIZATION

Course Code: DSC4206

Credit Units-01

Course Contents:

Module 1: Introduction to data visualization:

Introduction to data visualization. Explore and manipulate all graphical parameter. Drawing graphs such as scatterplot, stripchart, histogram, boxplot, violin chart, bar chart, dot plot, line graph, line plot, multiplot, stacked bar chart, pie diagram, venn diagram, pair plot. Explore 3d chart, motion chart, interactive charts. Discuss selecting appropriate chart for strategy presentation. Save graphs in various formats. Discuss different ways to combine multiple figures. Discuss margin and graph size.

Module 2: Introduction to Tableau:

Creating Visual Analytics with Tableau Desktop, Connecting to your data, Building your first visualization, Creating Calculations to enhance your data, using maps to improve insight, developing an Ad Hoc Analysis Environment, Tips Tricks and Time Savers, Bringing it all together with dashboards. Installing Tableau Server, Using Tableau server to facilitate fact based team collaboration, Automating Server with Tableau's command line tools, Use case for rapid fire visual analytics, other Tools. Explore various case studies to visualize the data.

Examination Scheme:

BIG DATA TOOLS & TECHNOLOGIES-II

Course Code: DSC4207

Credit Units-01

Course Contents:

Module 1: Fundamental of Apache Pig

What is Pig?, Introduction to Pig Data Flow Engine, Pig and Map Reduce in Detail, When should Pig Used?, Pig and Hadoop Cluster, Pig Interpreter and Map Reduce, Pig Relations and Data Types, Pig example in Detail, Debugging and Generating Example in Apache Pig

Pig philosophy and architecture, Pig installation, Grunt shell, Loading data, Exploring Pig Latin commands, Pig Transformations functions, Joins in Pig, Hands on Exercises

Module 2: Fundamental of Apache Hive

What is Hive?, Architecture of Hive, Hive Services, Hive Clients, How Hive Differs from Traditional RDBMS, Introduction to HiveQL, Data Types and File Formats in Hive, File Encoding , Common problems while working with Hive

Hive architecture, Hive installation, Hive vs. RDBMS, HiveQL and the Hive shell, Data types and schemas, Creating tables (external vs. managed), Creating Partitions, Creating Views, UDF function in java in Hive, Using hive to create diff types of format

Examination Scheme:

DATA STRUCTURE & ALGORITHM DESIGN LAB

Course Code: DSC4210

Credit Units-01

Course Contents:

Module I

Stack implementation through arrays, link list

Module II

Programs for recursion functions

Module III

Implementation of queues and leap structures

Module IV

Application of binary trees in pre-order, post-order and in-order evaluation

Module V

A VL tree implementation

Module VI

Optimal matrix multiplication

PATTERN RECOGNITION

Course Code: DSC4211

Credit Units-01

Course Contents:

Statistical Pattern Recognition

Introduction, Gaussian model, discriminant functions, classifier performance, risk and errors; supervised learning using parametric and nonparametric approaches: ML estimation, Bayesian parameter estimation approach, Parzen Windows, k-nn estimation; Unsupervised learning and clustering: the clustering concept, c-means algorithm, learning vector quantization, clustering strategies, a hierarchical clustering procedure.

NEXT GENERATION SEQUENCING ANALYSIS

Course Code: DSC4212

Credit Units-01

Course Contents:

Module 1: Introduction to NGS and NGS Technologies

Introduction to sequencing technologies from a data analysts view, Concept, Applications of sequencing technologies in Whole genome assembly; Gene expression analysis; Genome annotation; Gene regulation analysis; Variation studies

Module 2: NGS data analysis: Preprocessing

Introduction to NGS data analysis, Raw sequence files (FASTQ format), Preprocessing of raw reads: quality control (FastQC), adapter clipping, quality trimming, Introduction to read mapping (Alignment methods, Mapping heuristics), Read alignment to a reference genome (BWA, Bowtie2, TopHat), Mapping output (SAM/BAM format), Usage of important NGS toolkits (samtools, BEDtools), Mapping statistics, Visualization of mapped reads (IGV, UCSC)

Module 3: NGS data analysis: Variant calling

DNA variant calling and Filtering DNA variants using GATK pipeline

Module 4: NGS data analysis: Gene Expression Analysis

Genomics and transcriptome assembly, Differential Expression analysis, Quantification of expression,

GENERALIZED & LINEAR MODELING

Course Code: DSC4301

Credit Units-03

Course Contents:

Module 1: Introduction to Generalized Linear Models:

Linear model, Non linear model, GLM

Module 2: Linear Regression Models:

Multiple regression model, Parameter estimation, Maximum likelihood, Model adequacy checking, Weighted least squares

Module 3: Nonlinear Regression Models:

Linear and Non linear regression models, transforming a linear model, Parameter estimation

Module 4: Logistic and Poisson Regression Models:

Logistic regression, Poisson regression, Overdispersion

Module 5: The Generalized Linear Model: Exponential family, Likelihood equations, Quasi likelihood, Gamma family, The power function, Generalized Estimating Equation

DEEP LEARNING & NEURAL NETWORKS

Course Code: DSC4302

Credit Units-03

Course Contents:

Module 1: Introduction to deep learning:

Conceptual overview of neural network, Supervised Learning with Neural Networks, Deep neural network, Why is Deep Learning a Buzz word

Module 2: Neural Networks Basics:

Binary Classification, Logistic Regression Cost Function, Gradient Descent, Derivatives, More Derivative Examples, Computation graph, Derivatives with a Computation Graph, Logistic Regression Gradient Descent, Gradient Descent on m Examples, Vectorization, More Vectorization Examples, Vectorizing Logistic Regression, Vectorizing Logistic Regression's Gradient Output, Explanation of logistic regression cost function

Module 3: Shallow neural networks:

Neural Networks Overview, Neural Network Representation, Computing a Neural Network's Output, Vectorizing across multiple examples, Explanation for Vectorized Implementation, Activation functions, Why do you need non-linear activation functions?, Derivatives of activation functions, Gradient descent for Neural Networks, Backpropagation intuition, Random Initialization

Module 4: Deep Neural Networks:

Deep L-layer neural network, Forward Propagation in a Deep Network, Getting your matrix dimensions right, Why deep representations?, Building blocks of deep neural networks, Forward and Backward Propagation, Parameters vs Hyperparameters, What does this have to do with the brain?

Module 5: Case study using real world data.

Building a neural network model and generating predictions from the model.

Examination Scheme:

TIME SERIES

Course Code: DSC4303

Credit Units-03

Course Contents:

Module 1: Autoregressive-moving average models ARIMA

Moving average models MA(q). Condition of invertability. Autoregressive models AR(p). Yull-Worker equations. Stationarity conditions. Autoregressive-moving average models ARMA (p,q).

Module 2: Coefficient estimation in ARIMA processes.

Coefficients estimation in autoregressive models. Coefficient estimation in ARMA (p) processes. Quality of adjustment of time series models. AIC information criterion. BIC information criterion. “Portmanto”-statistics.

Module 3: Forecasting in the framework of Box-Jenkins model

Forecasting, trend and seasonality in Box-Jenkins model.

Module 4: Non-stationary time series

Non-stationary time series. Time series with non-stationary variance. Non-stationary mean. ARIMA (p,d,q) models. The use of Box-Jenkins methodology to determination of order of integration.

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

GRAPH & SOCIAL NETWORK ANALYSIS

Course Code: DSC4304

Credit Units-03

Course Contents:

Module 1: Introduction to graph theory

Use of graph theory to construct different types of networks : Undirected, directed graphs, Cyclic, Directed acyclic graphs, trees, weighted graphs, bipartite graph, Study data structures of the graphs. Adjacency matrix, adjacency list.

Module 2: Study different network models

Small world phenomena, Scale free network, Erdős-Rényi model for random graphs, Watts and Strogatz model, Barabasi-Albert model

Module 3: Study network properties

Degree distribution, power law, graph density, graph isomorphism, path length, diameter, clique, shortest distance, clustering coefficient, network motifs, network centralities and node ranking, degree centrality, closeness centrality, betweenness centrality, eigenvector centrality, eccentricity centrality, subgraph centrality, matching index,

Module 4: Network randomization

Randomization with Erdős-Rényi model, Randomization with node degree conservation, Permutation of node labels

Module 5: Introduction to social network

Introduction to social network data, Different data format, Paths and Connectivity-Graphs to represent social relations. Working with network data- Network Datasets-Strong and weak ties - Closure, Structural Holes, and Social Capital.

Module 6: Data and Text Mining In Social Media

Data mining in nutshell, Social media, Motivations for data mining in social media, Data mining methods for social media. Social networking sites: illustrative examples. Text Mining: Keyword search, query semantics and answer ranking, Classification algorithms, Clustering algorithms.

Module 7: Community Detection in Social Networks

Introduction, Communities in context, core methods and algorithm for community detection, Quality functions, Agglomerative/Divisive algorithms, discuss different approaches for clustering.

Module 8: Case study using real world data.

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

NATURAL LANGUAGE PROCESSING

Course Code: DSC4305

Credit Units-02

Course Contents:

Module 1: Introduction to text mining

Introduction, Challenges of Text Processing, Character-Set Dependence, Language Dependence, Corpus Dependence, Application Dependence

Module 2: Exploring Text Data For Preliminary Ideas

A case study for a brief introduction, Examine multiple document corpus of text, Creation of text corpus, Text pre-processing, Stemming, Word tokenisation, Word vectorisation, Word embedding

Module 3: Natural Language Processing:

Sentiment Analysis, Word Frequency in text data, Wordclouds for visualizing sentiments with a case study, Wordclouds for Visualizing text data, Tidy wordclouds, Topic modelling a document

Module 4: Text Data and Machine Learning

Clustering for text data, Clustering tweets, Regression on text data, Introduction to RTextTools, More on RTextTools, Word2Vec approach, The Doc2Vec approach, Doc2Vec approach for predicting a binary outcome, Doc2Vec approach for multi-class classification

Module 5: Sentiment Analysis

What is sentiment, What is sentiment analysis, Scope of sentiment analysis: Document level, Sentence level, Sub-sentence level, Types of sentiment analysis, Word embeddings, Word associations or Text similarities, Building dictionaries, Summarise text, Polarity calculation, Algorithms for sentiment analysis: Rule based, Automatic Hybrid

Module 6: Case study using real world data.

Identify Spam-ham Emails or sms classification.

Examination Scheme:

GRAPH & SOCIAL NETWORK ANALYSIS LAB

Course Code: DSC4306

Credit Units-01

Course Contents:

Module 1: Study Tools for graphs and network study :

Case studies will be implemented by using any programming language such as R or python. Learn other tools like Cytoscape and Gephi, and igraph

Module 2: Introduction to graph theory

Input graph data : Read different network format, load network data, Construct network from matrix, Adjacency matrix. Input different types of networks : Undirected, directed graphs, Cyclic, Directed acyclic graphs, trees, weighted graphs, bipartite graph. Study data structures of the graphs. Adjacency matrix, adjacency list.

Module 3: Study different network models

Small world phenomena, Scale free network, Erdős-Rényi model for random graphs, Watts and Strogatz model, Barabasi-Albert model

Module 4: Study network properties

Degree distribution, power law, graph density, graph isomorphism, path length, diameter, clique, shortest distance, clustering coefficient, network motifs, network centralities and node ranking, degree centrality, closeness centrality, betweenness centrality, eigenvector centrality, eccentricity centrality, subgraph centrality, matching index,

Module 5: Network randomization

Randomization with Erdős-Rényi model, Randomization with node degree conservation, Permutation of node labels

Module 6: Introduction to social network

Introduction to social network data, Different data format, Paths and Connectivity-Graphs to represent social relations. Working with network data- Network Datasets-Strong and weak ties - Closure, Structural Holes, and Social Capital.

Module 7: Data and Text Mining In Social Media

Data mining in nutshell, Social media, Motivations for data mining in social media, Data mining methods for social media. Social networking sites: illustrative examples. Text Mining: Keyword search, query semantics and answer ranking, Classification algorithms, Clustering algorithms.

Module 8: Community Detection in Social Networks

Introduction, Communities in context, core methods and algorithm for community detection, Quality functions, Agglomerative/Divisive algorithms, discuss different approaches for clustering.

Module 9: Case study using real world data.

BIG DATA TOOLS & TECHNOLOGIES-III

Course Code: DSC4307

Credit Units-01

Course Contents:

Module 1: Apache Sqoop (SQL to Hadoop)

Sqoop Tutorial, How does Sqoop Work, Sqoop JDBC Driver and Connectors ,Sqoop Importing Data Various Options to Import Data (Table Import , Binary Data Import ,Speedup the Import ,Filtering Import, Full Database Import ,Introduction to Sqoop

Module 2: Apache Flume

Data Acquisition: Apache Flume Introduction, Apache Flume Components, POSIX and HDFS File Write, Flume Events, Interceptors, Channel Selectors, Sink Processor

Module 3: Advanced Apache Flume

Sample Twitter Feed Configuration, Flume Channel (Memory Channel, File Channel),Sinks and Sink Processors, Sources, Channel Selectors, Interceptors

Module 4: HBase Introduction

Fundamentals of HBase, Usage Scenario of HBase, Use of HBase in Search Engine, HBase Data Model (Table and Row, Column Family and Column Qualifier, Cell and its Versioning, Regions and Region Server), HBase Designing Tables, HBase Data Coordinates, Versions and HBase Operation (Get/Scan, Put, Delete)

GENERALIZED & LINEAR MODELING LAB

Course Code: DSC4308

Credit Units-01

Course Contents:

Module 1: Linear Regression Models:

Multiple regression model, Parameter estimation, Maximum likelihood, Model adequacy checking, Weighted least squares with case studies

Module 2: Nonlinear Regression Models:

Linear and Non linear regression models, transforming a linear model, Parameter estimation with case studies

Module 3: Logistic and Poisson Regression Models:

Logistic regression, Poisson regression, Overdispersion with case studies

Module 4: The Generalized Linear Model: Exponential family, Likelihood equations, Quasi likelihood, Gamma family, The power function, Generalized Estimating Equation with case studies

Examination Scheme:

TIME SERIES LAB

Course Code: DSC4309

Credit Units-01

Course Contents:

Module 1: Autoregressive-moving average models ARMA

Moving average models MA(q). Condition of invertability. Autoregressive models AR. Yull-Worker equations. Stationarity conditions. Autoregressive-moving average models ARMA with case studies

Module 2: Coefficient estimation in ARMA processes. Box-Jenkins' approach

Coefficients estimation in autoregressive models. Coefficient estimation in ARMA processes. Quality of adjustment of time series models. AIC information criterion. BIC information criterion. "Portmanto"-statistics. Box-Jenkins methodology to identification of stationary time series models with case studies

Module 3: Forecasting in the framework of Box-Jenkins model

Forecasting, trend and seasonality in Box-Jenkins model with case studies

Examination Scheme:

DEEP LEARNING & NEURAL NETWORKS LAB

Course Code: DSC4310

Credit Units-01

Course Contents:

Module 1: Neural Networks Basics:

Calculation of Logistic Regression Cost Function, Implementation of Gradient Descent, Derivatives, More Derivative Examples, Computation graph, Derivatives with a Computation Graph, Logistic Regression Gradient Descent, Gradient Descent using case studies

Module 2: Shallow neural networks:

Neural Network Representation, Computing a Neural Network's Output, Vectorizing across multiple examples, Calculation of Activation functions, non-linear activation functions, Derivatives of activation functions, Gradient descent for Neural Networks, Backpropagation intuition, Random Initialization using case studies

Module 3: Deep Neural Networks:

Developing a Deep L-layer neural network, Forward Propagation in a Deep Network, Getting your matrix dimensions right, Understanding Building blocks of deep neural networks, Forward and Backward Propagation, Parameters vs Hyperparameters using case studies

SUMMER INTERNSHIP EVALUATION

Course Code: DSC4335

Credit Units: 08

Guidelines:

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc.

In order to achieve these objectives:

- **Each student will be allotted a supervisor** for proper guidance.
- **Student will first submit synopsis in the format given by coordinator/supervisor.**
- Student will maintain a file (**Internship File/Project Report**). **Further, coordinator will provide NTCC project guidelines and sample to help in preparation of file.** The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development. The File will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

The **layout guidelines** for the Project Report

1. File should be in the following specification

- A4 size paper
- **Font**

For normal text Font Type and Size must be- Times New Roman, 12 pt. The minimum font size of materials within a table or a figure can be 10 point.

- **Margins**

A margin of 3.75 cm (1½ inch) is to be given on the binding edge while on the other sides it is to be 2.5 cm (1 inch). The text of the report, including headings, figures, tables, and notes, but excluding page numbers, must be accommodated within the page area.

- **Line Spacing**

The line spacing in the main text must be between one-and-a-half (1.5). Single line spacing should be given for figure captions, table titles, figure legends, and footnotes. Equations, tables, figures, and quotations should be set off from the main text with adequate space (not less than the normal line spacing adopted for the main text). Two consecutive paragraphs should be separated by a spacing which must be larger than the line spacing adopted for the text.

- **Tables and Figures**

Each sketch, drawing, graph and photograph should have a figure number and title below the figure etc. Numbering should be sequential, chapter wise. For instance, if there are 24 figures chapter 3 spread

over all of its sections the figure numbers run from Figure 3.1 through Figure 3.24. In figures experimental data should typically be represented by centered symbols, and theoretical data by continuous curves.

Each table should have a table number and caption above the table. Numbering should be sequential, chapter wise, as in the case of Figure numbers. For instance, if there are 18 tables in chapter 3 the table numbers run from Figure 3.1 through Figure 3.18.

Make sure that figures and tables are complete in other respects such as legends, references (if any) and coordinate labels with units. Each figure and table must be explicitly referred to in the text and located where its first reference occurs, preferably after the reference.

- **Drawings**

All engineering drawings must conform to relevant Standards and should include a title block. If drawings are large they should be included at the back of the report in a separate pocket. In case drawings are made using CAD packages, a CD ROM should be included which contains all the files and details of the packages used.

- **Equations**

The numbering of equations should be sequential, chapter wise. Numbered equations must be explicitly referred to in the text.

2. Report Size: The maximum number of pages of the Report should be preferably between 50-80 pages.

3. Report Layout: The report should contain the following components

Front Page
Table of Content
Acknowledgement
Student Certificate
Company Profile (optional)
Introduction
Main Body
References / Bibliography

The File will include *five sections* in the order described below. The content and comprehensiveness of the main body and appendices of the report should include the following:

1. **The Title Page**--Title - An Internship Experience Report For (Your Name), name of internship organization, name of the Supervisor/Guide and his/her designation, date started and completed, and number of credits for which the report is submitted.

2. **Declaration by the Students**--This is page number (i), the beginning of the small case Roman numeral page numbers. The student has to give a declaration to the effect that the data used for the work, the work depicted in the report, and the written material contained in the report are not copied from others and that due permission has been taken from, and due credit has been given to, the sources whenever they are used.

3. **Certificate**--This is page number (ii). The certificate will be signed by the Faculty Supervisor(s) before the viva-voce after verifying the format and by the Head of the Department after review with the Supervisor(s).

4. **Acknowledgements**--This is page number (iii). Keep this brief and avoid using informal language. This page must be signed by the candidate.

5. **Abstract and Keywords**--This is page number (iv). The abstract (preferably one page) should contain the context/relevance of the problem at hand, a description of what was done and a gist of the significant observations/results.

The keywords (maximum 6) are a hint that what is contained in the report.

7. Contents--This is page number (v). The table of Contents should be titled just *Contents* (not Table of Contents). Try to fit it into one or two pages.

8. Introduction--short, but should include how and why you obtained the internship experience position and the relationship it has to your professional and career goals.

9. Main Body--should include but not be limited to daily tasks performed. Major projects contributed to, dates, hours on task, observations and feelings, meetings attended and their purposes, listing of tools and materials and their suppliers, and photographs if possible of projects, buildings and co-workers.

10. References / Bibliography --This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

ASSESSMENT OF THE INTERNSHIP FILE

Continuous Internal Assessment	Final Assessment
40 Marks	60 Marks

Continuous Internal Assessment consists of topic relevance, progress report and synopsis marks. Final Assessment includes viva, presentation and report marks.

Examination Scheme:

Components	V	S	R	PR	FP
Weightage (%)	20	20	20	20	20

V – Viva, S – Synopsis, FP – Final Presentation, R – Report, PR-Progress Report

DISSERTATION/ PROJECT REPORT/ PRESENTATION/ VIVA VOCE

Course Code: DSC4437

Credit Units: 20

GUIDELINES FOR DISSERTATION

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critiqued by the faculty guide and corrected by the student at each stage.

The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

In general, the File should be comprehensive and include

A short account of the activities that were undertaken as part of the project;

A statement about the extent to which the project has achieved its stated goals.

A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;

Any activities planned but not yet completed as part of the DISSERTATION, or as a future initiative directly resulting from the project;

Any problems that have arisen that may be useful to document for future reference.

➤ Report Layout

The report should contain the following components:

➤ Title or Cover Page

The title page should contain the following information: Project Title; Student's Name; Course; Year; Supervisor's Name.

➤ Acknowledgements (optional)

Acknowledgment to any advisory or financial assistance received in the course of work may be given.

➤ Abstract

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project

➤ Table of Contents

Titles and subtitles are to correspond exactly with those in the text.

➤ Introduction

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

➤ **Materials and Methods**

This section should aim at experimental designs, materials used. Methodology should be mentioned in details including modifications if any.

➤ **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing these section, emphasis should be given on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary never write in “point” form.

➤ **Conclusion**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

➤ **Future prospects**

➤ **Appendices**

The Appendix contains material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

➤ **References / Bibliography**

This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

Examples

For research article

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infect*, **8** (suppl 1): 116–117.

For book

Kowalski, M. (1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63–67

ASSESSMENT OF THE DISSERTATION FILE

Essentially, marking will be based on the following criteria: the quality of the report, the technical merit of the project and the project execution.

Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project.

Project execution is concerned with assessing how much work has been put in.

The File should fulfill the following *assessment objectives*:

Range of Research Methods used to obtain information

Execution of Research

Data Analysis

Analyse Quantitative/ Qualitative information

Control Quality

Draw Conclusions

Examination Scheme:

Dissertation	50
Viva Voce	50
Total	100

Selecting the Dissertation Topic

It is usual to give you some discretion in the choice of topic for the dissertation and the approach to be adopted. You will need to ensure that your dissertation is related to your field of specialization.

Deciding this is often the most difficult part of the dissertation process, and perhaps, you have been thinking of a topic for some time.

It is important to distinguish here between ‘dissertation topic’ and ‘dissertation title’. The topic is the specific area that you wish to investigate. The title may not be decided until the dissertation has been written so as to reflect its content properly.

Few restrictions are placed on the choice of the topic. Normally we would expect it to be:

- relevant to business, defined broadly;
- related to one or more of the subjects or areas of study within the core program and specialisation stream;
- clearly focused so as to facilitate an in-depth approach, subject to the availability of adequate sources of information and to your own knowledge;
- of value and interest to you and your personal and professional development.

Planning the Dissertation

This will entail following:

- Selecting a topic for investigation.
- Establishing the precise focus of your study by deciding on the aims and objectives of the dissertation, or formulating questions to be investigated. Consider very carefully what is worth investigating and its feasibility.
- Drawing up initial dissertation outlines considering the aims and objectives of the dissertation. Workout various stages of dissertation
- Devising a timetable to ensure that all stages of dissertation are completed in time. The timetable should include writing of the dissertation and regular meetings with your dissertation guide.

The Dissertation plan or outline

It is recommended that you should have a dissertation plan to guide you right from the outset. Essentially, the dissertation plan is an outline of what you intend to do, chapter wise and therefore should reflect the aims and objectives of your dissertation.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

There are several reasons for having a dissertation plan

- It provides a focus to your thoughts.
- It provides your faculty-guide with an opportunity, at an early stage of your work, to make constructive comments and help guide the direction of your research.
- The writing of a plan is the first formal stage of the writing process, and therefore helps build up your confidence.
- In many ways, the plan encourages you to come to terms with the reading, thinking and writing in a systematic and integrated way, with plenty of time left for changes.
- Finally, the dissertation plan generally provides a revision point in the development of your dissertation report in order to allow appropriate changes in the scope and even direction of your work as it progresses.

Keeping records

This includes the following:

- Making a note of everything you read; including those discarded.
- Ensuring that when recording sources, author's name and initials, date of publication, title, place of publication and publisher are included. (You may consider starting a card index or database from the outset). Making an accurate note of all quotations at the time you read them.
- Make clear what is a direct quotation and what is your paraphrase.

Dissertation format

All students must follow the following rules in submitting their dissertation.

- Front page should provide title, author, Name of degree/diploma and the date of submission.
- Second page should be the table of contents giving page references for each chapter and section.
- The next page should be the table of appendices, graphs and tables giving titles and page references.
- Next to follow should be a synopsis or abstract of the dissertation (approximately 500 words)
- Next is the 'acknowledgements'.
- Chapter I should be a general introduction, giving the background to the dissertation, the objectives of the dissertation, the rationale for the dissertation, the plan, methodological issues and problems. The limitations of the dissertation should also be hinted in this chapter.
- Other chapters will constitute the body of the dissertation. The number of chapters and their sequence will usually vary depending on, among others, on a critical review of the previous relevant work relating to your major findings, a discussion of their implications, and conclusions, possibly with a suggestion of the direction of future research on the area.
- After this concluding chapter, you should give a list of all the references you have used. These should be cross - references with your text. For articles from journals, the following details are required e.g.

Draper P and Pandyal K. 1991, The Investment Trust Discount Revisited, Journal of Business Finance and Accounting, Vol18, No6, Nov, pp 791-832.

For books, the following details are required:

Levi, M. 1996, International Financial Management, Prentice Hall, New York, 3rd Ed, 1996

- Finally, you should give any appendices. These should only include relevant statistical data or material that cannot be fitted into the above categories.

The Layout Guidelines for the Dissertation

- A4 size Paper

- Font: Arial (10 points) or Times New Roman (12 points)
- Line spacing: 1.5
- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

Guidelines for the assessment of the Dissertation

While evaluating the dissertation, faculty guide will consider the following aspects:

1. Has the student made a clear statement of the objective or objective(s).
2. If there is more than one objective, do these constitute parts of a whole?
3. Has the student developed an appropriate analytical framework for addressing the problem at hand.
4. Is this based on up-to-date developments in the topic area?
5. Has the student collected information / data suitable to the frameworks?
6. Are the techniques employed by the student to analyse the data / information appropriate and relevant?
7. Has the student succeeded in drawing conclusion form the analysis?
8. Do the conclusions relate well to the objectives of the project?
9. Has the student been regular in his work?
10. Layout of the written report.

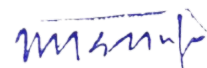

Assessment Scheme:

Continuous Evaluation: 40%
(Based on Abstract, Regularity,
Adherence to initial plan, Records etc.)

Final Evaluation: Based on, 60%
Contents & Layout of the Report, 20
Conceptual Framework, 05
Objectives & Methodology and 05
Implications & Conclusions 10
Viva & Presentation 20

INORGANIC CHEMISTRY LAB-I

Course Code: CHY2103

Credit Units: 01

Course Contents:

[I] Titrimetric Analysis

- (i) Calibration and use of apparatus
- (i) Preparation of solutions of different Molarity/Normality of titrants

[II] Acid- Base Titrations

- (i) Estimation of carbonate and hydroxide present together in mixture.
- (ii) Estimation of carbonate and bicarbonate present together in a mixture.
- (ii) Estimation of free alkali present in different soaps/detergents

[III] Oxidation- Reduction Titrimetry

- (i) Estimation of Fe(II) and oxalic acid using standardized KMnO_4 solution.
- (ii) Estimation of oxalic acid and sodium oxalate in a given mixture.
- (iii) Estimation of Fe(II) with $\text{K}_2\text{Cr}_2\text{O}_7$ using internal (diphenylamine, anthranilic acid) and external indicator.

*MSDS – Compilation of MSDS of chemicals used by students in each experiments is compulsory.

Examination Scheme:

ORGANIC CHEMISTRY LAB-I

Course Code: CHY2104

Credit Units: 01

Course Objective : This course will help the students to understand important fundamental concepts of Organic chemistry Lab at the undergraduate level. The main objective is to prepare students for the study of the basic Organic chemistry laboratory techniques.

Course Contents: (Minimum 8 experiments to be performed)

1. Calibration of the thermometer.
2. Recrystallization of organic compounds by using the following solvents: Water, Alcohol, Alcohol-Water & Charcoal.
3. Purification by Distillation, Decolouration (Charcoal treatment) and Sublimation.
4. Determination of the melting points of crude and crystalized compounds and unknown organic compounds (Kjeldahl method and electrically heated melting point apparatus)
5. Effect of impurities on the melting point – mixed melting point of two unknown organic compounds.
6. Determination of boiling point of liquid compounds. (Boiling point lower than and more than 100° C by distillation and capillary method)
7. Chromatography
 - a. Separation of a mixture of two amino acids by ascending and horizontal paper chromatography.
 - b. Separation of a mixture of two sugars by ascending paper chromatography.
 - c. Separation of a mixture of o- and p-nitrophenol or o- and p-aminophenol by thin layer chromatography (TLC)

***MSDS – Compilation of MSDS of chemicals used by students in each experiment is compulsory.**

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva, A - Attendance.

PHYSICS LAB-I

Course Code: CHY2107

Credit Units: 01

Course Contents:

1. Young's modulus – non uniform bending – pin and microscope.
2. Rigidity modulus – Static Torsion Method Using Scale and Telescope.
3. Rigidity modulus – Torsional oscillation method (without symmetric masses).
4. Determination of Co-efficient of Viscosity – Graduated Burette.
5. Surface Tension and Interfacial Tension – By drop weight method.
6. Specific Heat Capacity of a liquid – by Newton's Law of Cooling.
7. Sonometer – Determining A.C. Frequency (Screw Gauge is given).
8. Sonometer – frequency of tuning fork.
9. Newton's Rings – Radius of Curvature.
10. Air Wedge – Determination of thickness of thin wire.

Any other experiment carried out in the class.

Examination Scheme:

PHYSICAL CHEMISTRY-I

Course Code: CHY2201

Credit Units: 03

Course Objective: Objective of the course is to make students well aware of different states of matters and their properties along with some fundamentals of energy like average kinetic energy, law of equipartition of energy and heat capacity

Course Contents:

Module I: Gaseous state

Kinetic molecular model of a gas: postulates and derivation of the kinetic gas equation; collision frequency; collision diameter; mean free path and viscosity of gases, including their temperature and pressure dependence, relation between mean free path and coefficient of viscosity.

Deviations from ideal gas behaviour, compressibility factor Z , and its variation with pressure for different gases. Causes of deviation from ideal behaviour. van der Waals equation of state, its derivation and application in explaining real gas behaviour, virial equation of state; van der Waals equation expressed in virial form and calculation of Boyle temperature. Isotherms of real gases and their comparison with van der Waals isotherms, continuity of states, critical state, relation between critical constants and van der Waals constants, law of corresponding states.

Module II: Liquid state:

Qualitative treatment of the structure of the liquid state; physical properties of liquids; vapour pressure, surface tension and coefficient of viscosity, and their determination. Effect of addition of various solutes on surface tension and viscosity. Temperature variation of viscosity of liquids and comparison with that of gases.

Module III: Solid state:

Nature of the solid state, Miller indices, elementary ideas of symmetry, symmetry elements and symmetry operations, qualitative idea of point and space groups, seven crystal systems and fourteen Bravais lattices; X-ray diffraction, Bragg's law, a simple account of rotating crystal method and powder pattern method. Analysis of powder diffraction patterns of NaCl, CsCl and KCl. Defects in crystals.

Module IV: Velocities

Maxwell distribution and its use in evaluating molecular velocities (average, root mean square and most probable) and average kinetic energy, law of equipartition of energy, degrees of freedom and molecular basis of heat capacities.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

PHYSICAL CHEMISTRY LAB-I

Course Code: CHY2203

Credit Units: 01

Course Contents:

(I) **Surface tension measurements** (use of organic solvents excluded).

- a) Determine the surface tension by (i) drop number (ii) drop weight method.
- b) Study the variation of surface tension of detergent solutions with concentration

(II) **Viscosity measurement using Ostwald's viscometer** (use of organic solvents excluded).

- (a) Study the effect of the addition of solutes such as (i) polymer (ii) ethanol (iii) sodium chloride on the viscosity of water at room temperature.
- (b) Study the effect of variation of viscosity of an aqueous solution with the concentration of solute.

(III) **pH measurements**

- (a) Measurement of pH of different solutions using pH-meter.
- (b) Preparation of buffer solutions
 - (i) Sodium acetate-acetic acid
 - (ii) Ammonium chloride-ammonium hydroxide
- (c) Measurement of the pH of buffer solutions and comparison of the values

***MSDS – Compilation of MSDS of chemicals used by students in each experiment is compulsory.**

ANALYTICAL CHEMISTRY LAB

Course Code: CHY2204

Credit Units: 01

Course Contents:

Module I: Separation Techniques

- Chromatography: (a) Separation of mixtures
 - Paper chromatographic separation of Fe^{3+} , Al^{3+} , and Cr^{3+}
 - Separate and identify the monosaccharides present in the given mixture (glucose & fructose) by paper chromatography. Report the R_f values.
 - Separate a mixture of Sudan yellow and Sudan Red by TLC technique and identify them on the basis of their R_f values.
 - Chromatographic separation of the active ingredients of plants, flowers and juices by TLC
- Solvent Extractions:

To separate a mixture of Ni^{2+} & Fe^{3+} by complexing with DMG and extracting the Ni^{2+} DMG complex in chloroform, and determine its concentration with spectrophotometry.
- Determine the pH of given aerated drinks fruit juices, shampoos and soaps.
- Analysis of soil:
 - Determination of pH of soil.
 - Total soluble salt
 - Estimation of calcium, magnesium, phosphate, nitrate
- Ion exchange:
 - Determination of exchange capacity of cation exchange resins and anion exchange resins.
 - Separation of metal ions from their binary mixture.
 - Separation of amino acids from organic acids by ion exchange chromatography.
- Determination of pKa values of indicator using spectrophotometry.
- Determination of dissolved oxygen in water.
- Determination of chemical oxygen demand (COD).
- Determination of Biological oxygen demand (BOD).

*MSDS – Compilation of MSDS of chemicals used by students in each experiments is compulsory.

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V

PHYSICS LAB-II

Course Code: CHY2207

Credit Units: 01

Course Contents:

1. Spectrometer Grating – Minimum Deviation – Mercury Lines.
2. Spectrometer – Refractive Index of a liquid – Hollow Prism.
3. Potentiometer – Calibration of High Range Ammeter.
4. Potentiometer – Calibration of Low Range Voltmeter.
5. Determination of M and BH using Deflection Magnetometer in Tan C position and vibration magnetometer.
6. Figure of merit and voltage sensitiveness of table galvanometer.
7. Construction of AND, OR gates using diodes and NOT by transistors.
8. Zener diode – Voltage Regulation.
9. NAND / NOR as universal gate.
10. Demorgan's theorem verification.

Any other experiments can be carried out in class.

INORGANIC CHEMISTRY LAB-II

Course Code: CHY2305

Credit Units: 01

Course Objective: To provide training and experience in practical aspects of inorganic chemistry including preparation of some important inorganic compounds and estimation of some ions like Cu(II) ion etc

Course Contents:

Module I: Iodo / Iodimetric Titrations

- (i) Estimation of Cu (II) and $K_2Cr_2O_7$ Using sodium thiosulphate solution (Iodimetrically).
- (ii) Estimation of (i) arsenite and (ii) antimony in tartar-emetic iodimetrically
- (iii) Estimation of available chlorine in bleaching powder iodometrically.

Module II: Inorganic preparations

- (i) Cuprous Chloride, Cu_2Cl_2
- (ii) Preparation of Manganese (III) phosphate, $MnPO_4 \cdot H_2O$
- (iii) Preparation of Aluminium Potassium sulphate $KAl(SO_4)_2 \cdot 12H_2O$ (Potash alum) or Chrome alum.

***MSDS – Compilation of MSDS of chemicals used by students in each experiments is compulsory.**

Examination Scheme:

ORGANIC CHEMISTRY LAB-II

Course Code: CHY2306

Credit Units: 01

Course Objective: To provide experience in practical aspects of qualitative analysis of unknown organic compounds and detection of functional groups present.

Course Contents:

1. Systematic analysis of extra elements in the given unknown compounds
2. Tests for following functional groups and unsaturation.
3. Qualitative analysis of the following types of unknown organic compounds
 - a. Carboxylic acids
 - b. Phenols
 - c. Alcohols
 - d. Aldehydes
 - e. Ketones
 - f. Esters
 - a. Carbohydrates
 - b. Primary, secondary and tertiary amines
 - c. Nitro compounds
 - d. Amides
 - e. Aryl halides
 - f. Hydrocarbons

***MSDS – Compilation of MSDS of chemicals used by students in each experiment is compulsory.**

PHYSICAL CHEMISTRY LAB-II

Course Code: CHY2307

Credit Units: 01

Course Objective: To provide training in practical aspects of physical chemistry including determination of heat capacity, enthalpy of ionization, enthalpy of hydration of given compound. The course also involves determination of basicity/proticity of a polyprotic acid by the thermochemical method.

Course Contents:

(I) Thermochemistry

- (a) Determination of heat capacity of a calorimeter for different volumes using change of enthalpy data of a known system (method of back calculation of heat capacity of calorimeter from known enthalpy of solution or enthalpy of neutralization).
- (b) Determination of heat capacity of the calorimeter and enthalpy of neutralization of hydrochloric acid with sodium hydroxide.
- (c) Calculation of the enthalpy of ionization of ethanoic acid.
- (d) Determination of heat capacity of the calorimeter and integral enthalpy (endothermic and exothermic) solution of salts.
- (e) Determination of basicity/proticity of a polyprotic acid by the thermochemical method in terms of the changes of temperatures observed in the graph of temperature versus time for different additions of a base. Also calculate the enthalpy of neutralization of the first step.
- (f) Determination of enthalpy of hydration of copper sulphate.
- (g) Study of the solubility of benzoic acid in water and determination of ΔH .

(II) Indexing of given powder diffraction pattern of a cubic crystalline system.

(III) To determine the enthalpy of neutralization of a weak acid/ weak base versus base/ strong acid and determine the enthalpy of ionization of the weak acid base.

(IV) Determination of critical solution temperature and composition of the phenol-water system and to study the effect of impurities on it.

(V) Phase equilibria: Construction of the phase diagram of (i) simple eutectic and (ii) congruently melting systems, using cooling curves and ignition tube methods.

***MSDS – Compilation of MSDS of chemicals used by students in each experiment is compulsory.**

Any other experiment carried out in the class.

INDUSTRIAL CHEMISTRY

Course Code: CHY2308

Credit Units: 03

Course Objective: To enable a student to understand the generation of energy from various types of fuels and various manufacturing methods and types of glass, sugar, cement and soap & detergent.

Course Contents:

Module I: Industrial fuels

Energy: Sources: non-renewable, classification of fuels: solid, liquid and gaseous, Calorific value of fuels and its determination.

Solid fuels: Coal: types – properties and uses – lignite, sub-bituminous coal, bituminous coal and anthracite Coking and non-coking coal.

Liquid fuels: Refining of crude petroleum and uses of fractions, Hydrodesulphurisation, Cracking: thermal and catalytic (fixed bed and fluidised bed catalysis), Octane number, Cetane number.

Gaseous fuels: Natural gas and gobar gas: production, composition and uses, Gobar electric cell.

Module II: Glass industry

Introduction, classification of glass, basic raw materials of glass, manufacturing processes including chemical reactions, some special glasses: optical glass, coloured glass, fibre glass, laminate glass, safety glass, photosensitive glass, photochromatic glass, lead glass, borosilicate glass and glass wool.

Module III: Cement industry

Types of cement, manufacture of Portland cement, composition, setting and hardening of cement, Mortars and concrete, gypsum, plaster of paris, estimation of silica, alumina, calcium oxide and sulphates in Portland cement.

Module IV: Soaps and synthetic detergents

Manufacture of detergent, types of detergents, anionic, cationic, nonionic and amphoteric detergents, manufacture of soap, Liquid soap.

Module V: Sugar industry

Double sulphitation process, Refining and grading of sugar, Saccharin: synthesis and uses as a sugar substitute – aspartame, Ethanol: manufacture from molasses by fermentation.

Examination Scheme:

BIOINORGANIC CHEMISTRY

Course Code: CHY2309

Credit Units: 03

Course Objective: Course objective is to give students an understanding of which metals are found in biological systems and why. To enable students to learn about the structure and function of several enzymes that activates small molecules. To make students learn about the goals and methods of chemists that aim to mimic biological systems. Course also describes selected organometallic and inorganic complexes that do a good job of mimicking biological catalysis.

Course Contents:

Module I: Scope of Bioinorganic Chemistry

Inorganic elements in biological systems, cells, biologically important compounds amino acids, proteins, nucleotides, carbohydrates and lipids, basic bioenergetics, classification of enzymes. Biochemistry: Distribution, biological roles, active transport of cations across membranes, the sodium pump, biology of calcium carriers, role in muscle contraction, enzyme stabilization, blood clotting and biological calcification

Module II: Metalloporphyrins

Structure and optical spectra; heme proteins: magnetic susceptibility and electronic spectra; hemoglobin and myoglobin: molecular structures, thermodynamics and kinetics of oxygenation, electronic and spatial structures, synthetic oxygen carriers, model systems; iron enzymes, peroxidase, catalase and cytochrome P-450

Module III: Metalloenzymes

Copper enzymes, superoxide dismutase, cytochrome oxidase and ceruloplasmin; Coenzymes; Molybdenum enzyme: xanthine oxidase; Zinc enzymes: carbonic anhydrase, carboxy peptidase and interchangeability of zinc and cobalt in enzymes; Vitamin B12 and B12 coenzymes; Iron storage, transport, biomineralization and siderophores, ferritin and transferrins.

Module IV: Metals in Medicine

Metal deficiency and disease; toxicity of mercury, cadmium, lead, beryllium, selenium and arsenic; biological defence mechanisms; chelation therapy; metals used for diagnosis and chemotherapy, platinum complexes as anticancer drugs, Pt-DNA binding, complexes of gold, copper, zinc, mercury, arsenic and antimony as drugs.

Examination Scheme:

POLYMER CHEMISTRY

Course Code: CHY2404

Credit Units: 03

Course Objective: To know about the types of polymers, polymerization techniques and commercial polymers.

Course Contents:

Module I:

Polymers: Basic Concept, classification of polymers on the basis of structures and applications. Distinction among plastics, elastomers, and fibers, Homo and hetero polymers, copolymers, properties of polymers, glass transition temp. (T_g) - definition, factors affecting T_g , Relationship between T_g and molecular weight.

Module II:

Molecular Weight of polymers, Number average, weight average, sedimentation and viscosity, average molecular weights, Molecular weights and degree of polymerization. Reactions - Hydrolysis, Hydrogenation, addition, substitution, cross linking - vulcanization and cyclisation.

Module III:

Polymerization techniques: Bulk, solution, suspension & emulsion polymerization, melt polycondensation, Polymer processing, calendaring, die casting, rotational casting.

Module IV:

Chemistry of commercial polymers- General methods of preparation, properties and uses of the following - Teflon, polyethylene, polystyrene, polyesters, poly amides, polycarbonates and PVC.

Module V:

Advances in polymers; Bio-Polymers, biomaterials, polymers in medical field, High temperature and fire resistant polymers – synthesis, structural aspects and applications of silicones and siloxanes. Borazines, silicates and phosphazenes and polysulphates.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE

INORGANIC CHEMISTRY LAB-III

Course Code: CHY2405

Credit Units: 01

Course Objective: To provide training and experience in practical aspects of inorganic chemistry including estimation of Ca/Mg by complexometric titration and Cl^- ion determination.

Course Contents:

(a) Complexometric Titrations:

- (i) Complexometric estimation of (i) Mg^{2+} (ii) Zn^{2+} using EDTA
- (ii) Estimation of total hardness of water samples
- (iii) Estimation of Ca^{2+} in solution by (substitution method) using Erio-chrome black-T as indicator.
- (ii) Estimation of Ca/Mg in drugs and Biological samples.

(b) Argentometry

Estimation of Cl^- (i) By Mohr's method, (ii) By Vohlard's method, (iii) By Fajan's method.

(c) Paper Chromatographic separation of Ni (II) and Co(II); Cu(II) and Cd (II)

***MSDS – Compilation of MSDS of chemicals used by students in each experiments is compulsory.**

Examination Scheme:

ORGANIC CHEMISTRY LAB-III

Course Code: CHY2406

Credit Units: 01

Course Objective: To provide experience in separation techniques of mixture of organic compounds by means of thin layer chromatography and paper chromatography. Also it gives students a hands on experience involving preparation of synthetically important organic compounds.

Course Contents:

1. Thin Layer Chromatography:

Determination of R_f values and identification of organic compounds.

- Separation of green leaf pigments (spinach leaves may be used)
- Preparation and separation of 2,4 - dinitrophenylhydrazones of acetone, 2-butanone, hexane-2 and 3-one using toluene and light petroleum (40:60) as solvent system.
- Separation of a mixture of dyes using cyclohexane and ethylacetate (8.5:1.5) as solvent system.

2. Paper Chromatography: Ascending and Circular

- Determination of R_f values and identification of organic compounds.
- Separation of a mixture of phenylalanine and glycine. Alanine and aspartic acid. Leucine and glutamic acid. Spray reagent-ninhydrin.
- Separation of a mixture of D, L-alanine, glycine and L-Leucine using n-butanol:acetic acid : water (4:1:5) Spray reagent-ninhydrin.
- Separation of monosaccharides- A mixture of D-galactose and D-fructose using n-butanol:acetone:water (4:1:5) Spray reagent aniline hydrogen phthalate.

3. Organic preparations

- Acetylation of amines and phenols
- Benzoylation of amines and phenols by Schotten-Baumann reaction
- Hydrolysis of amides and esters to obtain benzoic acid.
- 2,4-DNP, semicarbazone and oxime derivative of carbonyl compound
- Nitration of nitrobenzene, chlorobenzene & bromobenzene
- Oxidation of the benzaldehyde, benzyl alcohol acetophenone to benzoic

*MSDS – Compilation of MSDS of chemicals used by students in each experiments is compulsory.

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

PHYSICAL CHEMISTRY LAB-III

Course Code: CHY2407

Credit Units: 01

Course Objective:

To provide training which involves determination of important property of fluids like surface tension, viscosity. It also enables student to compare strength of two acids and also to perform the potentiometric titration.

Course Contents:

1. To determine the velocity constant (specific reaction rate) of hydrolysis of methylacetate/ethyl acetate catalyzed by hydrogen ions at room temperature.
 2. To compare the strength of HCl and H₂ SO₄ by studying the kinetics of hydrolysis of ester.
 3. To study kinetically the reaction rate of decomposition of iodide by H₂O₂.
 4. Determination of surface tension/percentage composition of given organic mixture using surface tension method.
 5. Determination of viscosity/percentage composition of given organic mixture using viscosity method.
- (I) Study the equilibrium of at least one of the following reactions by the distribution method:
- (i) $I_2(aq) + I^- \rightarrow I_3^-(aq)$
 - (ii) $Cu^{2+}(aq) + nNH_3 \rightarrow Cu(NH_3)_n^{2+}$
- (II) Perform the following potentiometric titrations (at least two):
- (i) Strong acid with strong base (ii) weak acid with strong base and (iii) dibasic acid with strong base
- (III) Potentiometric titration of Mohr's salt with potassium dichromate.

*MSDS – Compilation of MSDS of chemicals used by students in each experiments is compulsory.

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

GREEN CHEMISTRY

Course Code: CHY2408

Credit Units: 03

Course Objective: To know the basics of Green Chemistry and its developments.

Course Contents:

Module I: Introduction

Need for green chemistry – principles of green chemistry – atom economy – definition with example (ibuprofen synthesis) – green oxidant – hydrogen peroxide.

Microwave assisted organic synthesis – apparatus required – examples of MAOS (synthesis of fused anthraquinones, acetalization of a byproduct of sugar industry, 1, 3-dipolar cycloaddition of nitrones to fluorinated dipolarophiles, Leukart reductive amination of ketones) – advantages and disadvantages of MAOS.

Organic reactions by sonication method – apparatus required – examples of sonochemical reactions (Heck, Hunsdiecker and Wittig reactions).

Module II: Green Reactions

Acetylation of primary amine, base catalyzed aldol condensation (synthesis of dibenzalpropanone), halogen addition to C=C bond (bromination of trans-stilbene), [4+2] cycloaddition reaction (Diels-Alder reaction between furan and maleic acid).

Rearrangement reaction (benzyl-benzilic acid rearrangement), coenzyme catalyzed benzoin condensation (thiamine hydrochloride catalyzed synthesis of enzoin, Pechmann condensation for coumarin synthesis (clay catalyzed solid state synthesis of 7-hydroxy-4-methylcoumarin).

Electrophilic aromatic substitution reactions (nitration of phenol, bromination of acetanilide) – green oxidation reactions (synthesis of adipic acid, preparation of manganese (III) acetylacetonate) – zeolite catalyzed Friedel-Crafts acylation.

Module III: Green Solvents

Ionic liquids: simple preparation – types – properties and application – ionic liquids in organic reactions (Heck reaction, Suzuki reactions, epoxidation), industrial (battery) and analytical chemistry (matrices for MALDI-TOF MS, gas chromatography stationary phases – advantages and disadvantages).

Super critical CO₂ – preparation, properties and applications (decaffeination, dry cleaning) – environmental impact.

Diels-Alder reaction in water – catalysis in water (aerobic oxidation of alcohols catalyzed by Pd(II) / bathophenanthroline).

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;

Att: Attendance

AGRICULTURE CHEMISTRY

Course Code: CHY2409

Credit Units: 03

Course Objective: To give the students the importance of Agricultural chemistry and an exposure to find, analyse and find a suitable method to cultivate and promote agricultural methods.

Course Contents:

Module I: Soil Chemistry

Introduction: Formation of Soil. Classification of soil and properties of soil - soil Acidity - Causes of acidity - soil alkalinity - determination of soil pH - Buffering of soils - Amending the soil - Reclamation of acid soil - Liming agents.

Module II: Soil Fertility and Productivity

Organic Manures - Farmyard Manure - Compost - Oil cakes - Bone meal - Meat meal - Fish meal - Blood meal and green Manures - Fertilizers - Classification of fertilizers - Requisites of a good fertilizers - Nitrogenous fertilizers - Phosphatic fertilizers - super Phosphate of lime - Triple super phosphate - NPK fertilizers - ill effects of fertilizers - effect of mixed fertilizers on soil pH - Micronutrients - role of micronutrients sources - Need for nutrient balance - Soil management and Micronutrients needs.

Module III: Pesticides

Classification of Insecticides - Stomach poisons - Contact poisons and Fumigants - Insecticides - Organic Insecticides - DDT - Gammexane - Malathion - Parathion - Fungicides - Herbicides - Rodenticides - Pesticides in India - Adverse environmental effects of pesticides.

Module IV: Plant growth regulators

3-Indole acetic acid, Naphthalene Acetic Acid, Ethephon (2-chloroethyl phosphoric acid), Alar (succinin acid-2, 2-dimethylhydrazine) their function, Plant hormones: Gibberlin, Cyclocel, Phosphon, Defoliant

Examination Scheme:

TERM PAPER

Course Code: CHY2431

Credit Units: 02

Objectives

The objective of this course is to judge the understanding as well as application of the knowledge gained by the students. The aim of the term paper is to provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking a significant practical unit of examining and analyzing various aspects of Chemistry & its application at a level commensurate with the learning outcomes of the various courses taken up them in the ongoing semester.

A term paper is primarily a record of intelligent reading in several sources on a particular subject. The students will choose the topic at the beginning of the session in consultation with the faculty assigned. At least one middle level or senior level person of a company from the chosen sector may be interviewed face to face

Guidelines:

1. The term paper will be related to the contemporary business issue and the topic will be given by the department.
2. The presentation of the term paper is scheduled to be held before the commencement of Semester examinations.
3. The paper will carry 100 marks that will be marked on the basis of understanding and organization of content based on the literature review. The Bibliography shall form an important part of the paper.
4. Examples of a few broad areas for term paper (List is indicative, not exhaustive)
 - Inorganic chemistry
 - Organic chemistry
 - Physical chemistry
 - Green chemistry
 - Agriculture chemistry

Evaluation Scheme

Organisation and relevance of content	Literature Review	Bibliography	Presentation	Total
30	30	20	20	100

WORKSHOP

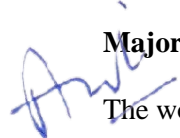

Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two way. The trainer has to make sure that the aspect covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

- Nuclear Chemistry

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- Modern trend in Inorganic Chemistry
- Modern trend in Organic Chemistry
- Modern trend in Physical Chemistry
- Nanotechnology and its application
- Polymer Chemistry
- Pharmaceuticals
- Food Technology
- Agriculture Chemistry
- Computational Chemistry
- Green Chemistry

These themes are merely indicative and other recent and relevant topics of study may be included.

Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

1. Relevant study material and references will be provided by the trainer in advance.
2. The participants are expected to explore the topic in advance and take active part in the discussions held
3. Attending and Participating in all activities of the workshop
4. Group Activities have to be undertaken by students as guided by the trainer.
5. Evaluation of workshop activities would be done through test and quiz at the end of the workshop.
6. Submitting a write up of at least 500 words about the learning outcome from the workshop.

Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

- Case Study
- Simulation
- Quiz
- Quality analysis& characterization
- Identification and preparation of materials

Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

PROJECT

Course Code: CHY2432

Credit Units: 03

Objectives:

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information/data, leading to production of a structured report.

Chapter Scheme and distribution of marks:

Chapter 1: Introduction – 10 marks

Chapter 2: Conceptual Framework/National/International Scenario – 25 marks

Chapter 3: Presentation, Analysis & Findings -- 25 marks

Chapter 4: Conclusion & Recommendations -- 10 marks

Chapter 5: Bibliography -- 05 marks

Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

1) Cover Page: This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.

2) Acknowledgement: Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.

3) Table of Content: Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

4) Body of the Report: The body of the report should have these four logical divisions

a) Introduction: This will cover the background, rationale/need/justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.

b) Conceptual Framework/National and International Scenario: (relating to the topic of the Project).

c) Presentation of Data, Analysis and Findings: (using the tools and techniques mentioned in the methodology).

d) Conclusion and Recommendations: In this section, the concluding observations based on the main findings and suggestions are to be provided.

5) Bibliography or References: This section will include the list of books and articles which have been used in the project work, and in writing a project report.

6) Annexures: Questionnaires (if any), relevant reports, etc.

(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

The Steps of a Project Report

STEP I : Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.
- Relevance of the topic

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

STEP II : Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

STEP III : Collection of information and data relating to the topic and analysis of the same.

STEP IV : Writing the report dividing it into suitable chapters, viz.,

Chapter 1: Introduction,

Chapter 2: Conceptual Framework / National & International Scenario,

Chapter 3: Analysis & Findings,

Chapter 4: Conclusion and Recommendations,

Chapter 5: Bibliography.

STEP V: The following documents are to be attached with the Final Project Report.

- Approval letter from the supervisor (Annexure-IA)
- Student's declaration (Annexure-IB)
- Certificate from the Competent Authority of the Organisation/Institution, if the student undertakes the Project Work in any Organisation/Institution.

Guidelines for evaluation:

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He/she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate. The evaluation scheme shall be as follows:

Project Report	Power Point Presentation & Viva
75 marks	25 marks

Annexure-IB
Student's Declaration

Ihereby declare that the Project Work with the title (in block letters).....
submitted by me for the partial fulfilment of the degree of B.Sc. Honours in Chemistry is my original work and has not been submitted earlier to any other University /Institution for the fulfilment of the requirement for any course of study.

I also declare that no chapter of this manuscript in whole or in part has been incorporated in this report from any earlier work done by others or by me. However, extracts of any literature which has been used for this report has been duly acknowledged providing details of such literature in the references.

INORGANIC CHEMISTRY LAB-IV

Course Code: CHY2504

Credit Units: 01

Course Objective: To provide training and experience in practical aspects of **inorganic chemistry** including preparation of some important inorganic compounds and estimation of some ions like Cu (II) ion, Ni(II) ion etc

Course Contents:

(a) Quantitative Analysis: The following quantitative estimations are to be carried out.

(i) Estimation of nickel(II) using Dimethylglyoxime as the precipitant.

(ii) Estimation of copper as CuSCN

(iii) Estimation of iron as Fe_2O_3 by precipitating iron as $\text{Fe}(\text{OH})_3$ through (i) Heterogeneous and (ii) Homogeneous media.

(iv) Estimation of Al (III) by precipitating with oxine and weighing as $\text{Al}(\text{oxine})_3$ (aluminium oxinate).

(b) Inorganic Preparations

(i) Tetraammine copper (II) sulphate, $[\text{Cu}(\text{NH}_3)_4]\text{SO}_4\cdot\text{H}_2\text{O}$

(ii) Potassium trisoxalatochromate (III), $\text{K}_3[\text{Cr}(\text{C}_2\text{O}_4)_3]$

(iii) Cis and trans $\text{K}[\text{Cr}(\text{C}_2\text{O}_4)_2(\text{H}_2\text{O})_2]$ Potassium dioxalatodiaquachromate

(iv) Pentaammine carbonato Cobalt(III) ion

(c) Spectrophotometric estimation of Ferrous ions by using 1,10 phenanthroline

***MSDS – Compilation of MSDS of chemicals used by students in each experiment is compulsory.**

ORGANIC CHEMISTRY LAB-IV

Course Code: CHY2505

Credit Units: 01

Course Objective:

To provide practical experience in organic preparation of azobenzene, benzopinacol and some other selected valuable organic compounds.

Course Contents:

Module 1: Organic Preparations

1. Diels-Alder reaction between anthracene and maleic anhydride
2. Reduction: nitrobenzene to azobenzene (TLC of the mixture), m-dinitrobenzene to m-nitroaniline
3. S-benzylisothiuronium salts of any one water soluble and one water insoluble acid: acetic acid, phenyl acetic acid, oxalic acid, benzoic acid, phthalic acid
4. Photochemical reduction of benzophenone to benzopinacol
5. Benzoin condensation of benzaldehyde (using thiamine hydrochloride)
6. Condensation of p-toluidine with benzaldehyde/salicylaldehyde/2-hydroxy-3-methoxy benzaldehyde to get Schiff's base (solventless condensation)

Estimation of:

1. Phenol and aniline by bromination with potassium bromate-potassium bromide method
2. Glycine by formylation method
3. Saponification value of an oil/fat

*MSDS – Compilation of MSDS of chemicals used by students in each experiment is compulsory.

Examination Scheme:

IA				EE

PHYSICAL CHEMISTRY LAB-IV

Course Code: CHY2506

Credit Units: 01

(I) To study changes in conductance in the following systems

(i) strong acid-strong base

(ii) weak acid-strong base and

(iii) mixture of strong acid and weak acid-strong base

(II) Study the kinetics of the following reactions.

1. Initial rate method: Iodide-persulphate reaction

2. Integrated rate method:

(a) Acid hydrolysis of methyl acetate with hydrochloric acid, volumetrically or conductometrically.

(b) Iodide-persulphate reaction

(c) Saponification of ethyl acetate.

Any other experiment carried out in the class.

*MSDS – Compilation of MSDS of chemicals used by students in each experiments is compulsory.

Examination Scheme:

FOOD & NUTRITION CHEMISTRY

Course Code: CHY2507

Credit Units: 03

Course Objective: To obtain knowledge about different foods, their nutritive values and food preservation.

Course Contents:

Module I:

Cereals definition - Classification, Processing - Structure of Cereals - Composition and nutritive value. Pulses definition - Classification - Processing - Structure of Pulses - Composition and nutritive value - Toxic Constituents in pulses - medicinal value of cereals and pulses. Sugar and related products. Sugar Structure and Properties. Nutritive value - Sugar composition in different food items. Sugar related product - Classification & nutritive value. Artificial sweeteners - example - advantages and disadvantages.

Module II:

Vegetables - classification - composition & nutritive values - Fruits- Classification - Composition & nutritive values. Fungi and algae as food - enzymatic browning and non enzymatic browning - Nutritive value of some common foods - milk, egg, soyabeans

Module III:

Beverages - definition and examples - Classification of beverages Fruit beverages - Milk based beverages - malted beverages - examples. Alcoholic and non alcoholic beverages - examples. Appetizers - definition - classification - examples - Water - functions and deficiency.

Module IV:

Food Preservatives - definition - classification - Food Spoilage - definition - Prevention. Methods of preservation - classification - Low and high temperature - preservatives examples - Dehydration - osmotic pressure - food irradiation.

Module V:

Food additives - Definition – classification - their functions - chemical substance. Packaging of foods - classification - Materials used for packaging.

Examination Scheme:

QUANTUM CHEMISTRY

Course Code: CHY2508

Credit Units: 03

Course Objective: To obtain knowledge about quantum mechanics and LCAO-MO treatment of single electron system hydrogen.

Course Contents:

Module I:

Postulates of quantum mechanics, quantum mechanical operators, Schrodinger equation and its application to free particle and "particle-in-a-box" (rigorous treatment), quantization of energy levels, zero-point energy and Heisenberg Uncertainty principle; wave functions, probability distribution functions, nodal properties, Extension to two and three dimensional boxes, separation of variables, degeneracy.

Module II:

Angular momentum: Commutation rules, quantization of square of total angular momentum and z-component, Qualitative treatment of hydrogen atom and hydrogen-like ions: setting up of Schrodinger equation in spherical polar coordinates, radial part, quantization of energy (only final energy expression), radial distribution functions of $1s$, $2s$, $2p$, $3s$, $3p$ and $3d$ orbitals. Average and most probable distances of electron from nucleus.

Module III:

Covalent bonding, valence bond and molecular orbital approaches, LCAO-MO treatment of H_2^+ . Bonding and antibonding orbitals, Qualitative extension to H_2 .

Comparison of LCAO-MO and VB treatments of H_2 and their limitations. Refinements of the two approaches (Configuration Interaction for MO, ionic terms in VB). Qualitative description of LCAO-MO treatment of homonuclear and heteronuclear diatomic molecules (HF , LiH). Localised and non-localised molecular orbitals treatment of triatomic (BeH_2 , H_2O) molecules. Qualitative MO theory and its application to AH_2 type molecules. Simple Huckel Molecular Orbital (HMO) theory and its application to simple polyenes (ethene, butadiene).

Examination Scheme:

TECHNICAL WRITING IN SCIENCE-I

Course Code: CHY2509

Credit Units: 02

Course Objective:

Students will be introduced to learning the written and oral communication of technical information. Assignments include writing and presenting proposals, reports, and documentation. Emphasis on use of rhetorical analysis, computer applications, collaborative writing, and usability testing to complete technical communication tasks in the workplace.

Course Contents:

Module I:

Writing Skills; Selection of topic, thesis statement, developing the thesis; introductory, developmental, transitional and concluding paragraphs, linguistic unity, coherence and cohesion, descriptive, narrative, expository and argumentative writing.

Module II:

Technical Writing: Scientific and technical subjects; formal and informal writings; formal writings/reports, handbooks, manuals, letters, memorandum, notices, agenda, minutes; common errors to be avoided.

Module III: Documentation Process

Understanding Audience/Readers, Collecting and Organizing information, Drafting information verbally and visually, Producing Information.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

WORKSHOP

Course Code: CHY2533

Credit Units: 01

Course Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two way. The trainer has to make sure that the aspect covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

- Nuclear Chemistry
- Modern trend in Inorganic Chemistry
- Modern trend in Organic Chemistry
- Modern trend in Physical Chemistry
- Nanotechnology and its application
- Polymer Chemistry
- Pharmaceuticals
- Food Technology
- Agriculture Chemistry
- Computational Chemistry
- Green Chemistry
- Environmental Chemistry

These themes are merely indicative and other recent and relevant topics of study may be included.

Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

- Relevant study material and references will be provided by the trainer in advance.
- The participants are expected to explore the topic in advance and take active part in the discussions held
- Attending and Participating in all activities of the workshop
- Group Activities have to be undertaken by students as guided by the trainer.
- Evaluation of workshop activities would be done through test and quiz at the end of the workshop.
- Submitting a write up of at least 500 words about the learning outcome from the workshop.

Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

- Case Study
- Simulation
- Quiz
- Quality analysis & characterization
- Identification and preparation of materials

SPECTROSCOPY

Course Code: CHY2604

Credit Units: 03

Course Objective: To impart knowledge about different spectroscopic techniques

Course Contents:

Module I:

Definition of spectrum - Electromagnetic radiation - quantization of different forms of energies in molecules (translational, rotational, vibrational and electronic).

Microwave Spectroscopy - theory of microwave spectroscopy - selection rule - Calculation of moment of inertia and bond length of diatomic molecules.

Module II: UV - Visible Spectroscopy

Absorption laws. Calculations involving Beer Lambert's law - instrumentation - photo colorimeter and spectrophotometer- block diagrams with description of components - theory - types of electronic transitions - chromophore and auxochromes - Absorption bands and intensity -factors governing absorption maximum and intensity.

Module III: I.R. Spectroscopy

Principle - modes of vibration of diatomic, triatomic linear (CO_2) and nonlinear triatomic molecules (H_2O) - stretching and bending vibrations - selection rules. Expression for vibrational frequency (derivation not needed), instrumentation - sampling techniques. Applications of IR Spectroscopy – interpretation of the spectra of alcohols, aldehydes, ketones and esters – aliphatic and aromatic. Hydrogen bonding.

Module IV: Raman Spectroscopy

Rayleigh and Raman scattering, Stokes and anti-Stokes lines. Differences between Raman and I.R. Spectroscopy. Rotational Raman spectra of Noncentrosymmetric molecules (HCl). Mutual exclusion principle (CO_2 and N_2O)

Module V: NMR Spectroscopy

Basic principles of Proton Magnetic Resonance, chemical shift and factors influencing it, equivalent and non equivalent protons.; Spin – Spin coupling and coupling constant; Anisotropic effects in alkene, alkyne, aldehydes and aromatics, Interpretation of NMR spectra of simple compounds. Applications of IR, UV and NMR for identification of simple organic molecules.

Examination Scheme:

BASICS OF COMPUTER PROGRAMMING IN C AND ITS APPLICATIONS IN CHEMISTRY

Course Code: CHY2605

Credit Units: 02

Course Objective: To introduce the basics of computers and to learn C language and its applications in solving problems in Chemistry.

Course Contents:

Module I:

Basic computer organization, processor and memory – main memory, secondary storage devices and storage hierarchy. Software – relationship between hardware and software – types of software. Planning the computer program – algorithm and flowcharts. Basics of operating systems.

Module II:

Computer languages – machine language, assembly language, assembler, compiler, interpreter and programming languages - C language – introduction, C compiler, operating systems and preprocessor directives - variables, constants, operators, input and output functions.

Module III:

Applications in Chemistry – calculation of the radius of the first Bohr orbit for an electron, calculation of half-life time for an integral order reaction, calculation of molarity, molality and normality of a solution, calculation of pressure of ideal or Vanderwaal's gas, Calculation of electronegativity of an element using Pauling's relation.

Module IV:

Applications in Chemistry - Calculation of empirical formulae of hydro carbon, calculation of reduced mass of a few diatomic molecules, determination of the wave numbers of spectral lines of hydrogen atom, calculation of work of expansion in adiabatic process, calculation of pH, solubility product and bond energy using Born - Lande equation, calculation of standard deviation and correlation coefficient.

Examination Scheme:

INORGANIC CHEMISTRY LAB-V

Course Code: CHY2606

Credit Units: 01

Course Objective: To provide students an experience in qualitative analysis of various cations and anions in a given mixture.

Course Contents:

Qualitative analysis:

Using H₂S /PTC/ Thioacetamide or any other reagent. Identification of cations and simple anions in a mixture of salts containing not more than six ions (Three cations and three anions) interfering anions using semimicro scheme of analysis. If combination of cations or anions is given in the mixture, insoluble should be avoided. Spot tests should be carried out for final identifications wherever feasible.

Cation : Pb²⁺, Bi³⁺, Cu²⁺, Cd²⁺, As³⁺, Sb³⁺, Sn²⁺ or Sn⁴⁺, Fe²⁺ OR Fe³⁺, Al³⁺, Cr³⁺, Co²⁺, Ni²⁺, Zn²⁺, Mn²⁺, Ba²⁺, Sr²⁺, Ca²⁺, Mg²⁺, NH⁴⁺, K⁺

Anion : CO₃²⁻, SO₃²⁻, CO₃²⁻, SO₃²⁻, S²⁻, NO₂⁻, CH₃COO⁻, NO₃⁻, Cl⁻, Br⁻, I⁻, SO₄²⁻, PO₄³⁻, BO₃³⁻, F⁻, C₂O₄²⁻

*MSDS – Compilation of MSDS of chemicals used by students in each experiments is compulsory.

Examination Scheme:

IA				EE

ORGANIC CHEMISTRY LAB-V

Course Code: CHY2607

Credit Units: 01

Course Objective:

To provide experience in practical aspects of qualitative analysis of given organic mixture and detection of functional groups present.

Course Contents:

Qualitative analysis of organic mixture containing two solid component using water, NaOH, NaHCO₃ for separation, prepare suitable derivative.

Identification of the functional groups, C-C and C-N triple bonds, sp³, sp² and sp hybridized C-H bonds by IR spectroscopy, NMR spectroscopy (IR & NMR spectra to be provided).

***MSDS – Compilation of MSDS of chemicals used by students in each experiments is compulsory.**

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

PHYSICAL CHEMISTRY LAB-V

Course Code: CHY2608

Credit Units: 01

Course Objective:

To provide training in practical aspects of **physical chemistry** including determination of transition temperature of given compound, verification of Lambert- Beer law, Onsagar equation, Kaulraush law.

Course Contents:

(I) Transition Temperature

- Determination of the transition temperature of the given substance by thermometric method(e.g. $\text{MnCl}_2 \cdot 4\text{H}_2\text{O}/\text{SrBr}_2 \cdot \text{H}_2\text{O}$).

(II) Spectroscopy

- Verification of Lambert-Beer's Law
- Determination of pK (indicator) for phenolphthalein or methyl red
- Study the formation of a complex between ferric and thiocyanate (or salicylate) ions.
- Study the kinetics of interaction of crystal violet with sodium hydroxide colourimetrically.
- Record the UV spectrum of p-nitrophenol (in 1:4 ethanol:water mixture). Repeat after adding a small crystal of NaOH. Comment on the difference, if any.
- Record the U.V. spectrum of a given compound (acetone) in cyclohexane
- (a) Plot transmittance *versus* wavelength.
- (b) Plot absorbance *versus* wavelength.

(III) Potentiometric titration

- Find out base strength by titrating against with strong acid potentiometrically.

(IV) Electrochemistry

- Prove Debye Huckel Onsagar Equations
- Prove Kaulraush law, Calculate equivalent conductance of acetic acid at infinite dilution

Any other experiment carried out in the class can be included.

***MSDS – Compilation of MSDS of chemicals used by students in each experiments is compulsory.**

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

PROGRAMMING IN C LAB

Course Code: CHY2609

Credit Units: 01

Course Contents:

- DOS commands
- Creation of batch files
- C program involving problems like finding the nth value of cosine series, Fibonacci series. Etc.
- C programs including user defined function calls
- C programs involving pointers, and solving various problems with the help of those.
- File handling

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

MATERIAL CHEMISTRY

Course Code: CHY2610

Credit Units: 03

Course Objective: To introduce and give an insight into the fascinating area of solid state chemistry and material science. This will enable the students in pursuing higher studies.

Course Contents:

Module I: Structures of solids

Introduction to solids – crystalline and amorphous. Unit cell, Bravais lattices and X-ray structure determination (NaCl and KCl only) – powder and single crystal- methods and applications-identification of the cubic lattice and indexing of the X-ray diffraction lines.

Radius ratio rules – coordination number. Packing arrangement -different structure types in solids – rock salt, zinc blende, wurtzite, fluorite and antifluorite, spinel and inverse-spinel and perovskite structures.

Module II: Preparative methods and characterization

Solid state reactions – ceramic method, sol-gel, hydrothermal, high pressure, zone refining, CVD, Czochralski and Bridgman and Stockbarger methods.

Physical methods – thermogravimetric and differential thermal analysis and scanning electron microscopy (only introduction and application).

Module III: Electrical and optical properties

Defects in solid state – point defects – Frenkel and Schottky defects and non-stoichiometric defects.

Conductors – variation of conductivity with temperature – semiconductors – p and n types, pn- junction, photoconduction, photo voltaic cell and photogalvanic cell – solar energy conversion, organic semiconductors.

Piezoelectric, pyro-electric and ferroelectrics (introduction and application).Photoluminescence.

Module IV: Magnetic properties

Magnetic properties – classification - diamagnetic, paramagnetic, antiferromagnetic, ferro and ferri magnetic — magnetic susceptibility. Variation with temperature – Curie-Wiess law, Curie temperature and Neel temperature. Permanent and temporary magnets.

Module V: Special materials

Superconductivity – introduction, Meissner effect – mention of Bardeen, Cooper and Schrieffer theory and Cooper pairs – examples of superconducting oxides, Chevrel phases– applications of superconducting materials.

Ionic conductors – sodium- α -alumina, sodium-sulphur battery. Intercalation – layered compounds – graphitic compounds. Special applications of solid state materials. High energy battery, lithium cells.

Liquid crystals: nematic, cholesteric and smectic types and applications.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;

NANOCHEMISTRY

Course Code: CHY2611

Credit Units: 03

Course Objective:

To introduce the basics of nanotechnology and to learn the instrumental techniques used in characterization of nano materials.

Course Contents:

Module I: Basics of Nanochemistry

Introduction – definition – length scales – importance of nanoscale and its technology – self assembly of materials – nanowires, nanorods and quantum dots.

Module II: Nano Particles

Techniques to synthesize nanoparticles – top down and bottom up approaches – common growth methods – characterization of nanoparticles – applications and toxic effects of nanomaterials.

Module III: Synthetic Techniques

Introduction – types of nanoparticles – preparation, properties and uses of gold, silicon, silver, zinc oxide, iron oxide, alumina and titania nanoparticles.

Module IV: Nano Materials

Preparation, properties and applications of carbon nanotubes, nanorods, nano fibre and nanoclay.

Module V: Instrumental Techniques

Basic principles of electron microscopes – scanning electron microscopes (SEM) – transmission electron microscopes (TEM) – scanning probe microscopy – atomic force microscopy (AFM) – scanning tunneling electron microscope (STEM), DLS, TGA, DSC.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE

TECHNICAL WRITING IN SCIENCE-II

Course Code: CHY2612

Credit Units: 02

Course Objective:

Students will be introduced to learning the written and oral communication of technical information. Assignments include writing and presenting proposals, reports, and documentation. Emphasis on use of rhetorical analysis, computer applications, collaborative writing, and usability testing to complete technical communication tasks in the workplace.

Course Contents:

Module I: Technical Writing Process

Document development process, Estimating Technical Documentation, Documentation Planning, Selection of Tools, Information Architecture, Templates and Page design, Audience Profiling.

Module II:

Journal paper writing: Abstract for paper and poster, different kind of journal for chemistry, impact factors of journals, ISBN number, Citation, H-index.

Module III:

Analytical report, Project Management in Technical Communication, Project writing, project proposal writing.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

TERM PAPER

Course Code: CHY2631

Credit Units: 02

Course Objectives

The objective of this course is to judge the understanding as well as application of the knowledge gained by the students. The aim of the term paper is to provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking a significant practical unit of examining and analyzing various aspects of chemistry and its application at a level commensurate with the learning outcomes of the various courses taken up them in the ongoing semester.

A term paper is primarily a record of intelligent reading in several sources on a particular subject. The students will choose the topic at the beginning of the session in consultation with the faculty assigned. At least one middle level or senior level person of a company from the chosen sector may be interviewed face to face

Guidelines:

1. The term paper will be related to the contemporary issue and the topic will be given by the department.
2. The presentation of the term paper is scheduled to be held before the commencement of Semester examinations.
3. The paper will carry 100 marks that will be marked on the basis of understanding and organization of content based on the literature review. The Bibliography shall form an important part of the paper.
4. Examples of a few broad areas for Term Paper (List is indicative, not exhaustive)
 - Inorganic chemistry
 - Organic chemistry
 - Physical chemistry
 - Green chemistry
 - Agriculture chemistry
 - Nanochemistry

Evaluation Scheme

Organisation and relevance of content	Literature Review	Bibliography	Presentation	Total
30	30	20	20	100

PROJECT

Course Code: CHY2632

Credit Units: 03

Course Objectives:

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

Chapter Scheme and distribution of marks:

Chapter 1: Introduction – 10 marks

Chapter 2: Conceptual Framework/ National/International Scenario – 25 marks

Chapter 3: Presentation, Analysis & Findings -- 25 marks

Chapter 4: Conclusion & Recommendations -- 10 marks

Chapter 5: Bibliography -- 05 marks

Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

1) Cover Page: This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.

2) Acknowledgement: Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.

3) Table of Content: Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

4) Body of the Report: The body of the report should have these four logical divisions

a) Introduction: This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.

b) Conceptual Framework / National and International Scenario: (relating to the topic of the Project).

c) Presentation of Data, Analysis and Findings: (using the tools and techniques mentioned in the methodology).

d) Conclusion and Recommendations: In this section, the concluding observations based on the main findings and suggestions are to be provided.

5) Bibliography or References: This section will include the list of books and articles which have been used in the project work, and in writing a project report.

6) Annexures: Questionnaires (if any), relevant reports, etc.

(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

The Steps of a Project Report

STEP I : Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.
- Relevance of the topic

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

STEP II : Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

STEP III : Collection of information and data relating to the topic and analysis of the same.

STEP IV : Writing the report dividing it into suitable chapters, viz.,

Chapter 1: Introduction,

Chapter 2: Conceptual Framework / National & International Scenario,

Chapter 3: Analysis & Findings

Chapter 4: Conclusion and Recommendations.

Chapter 5: Bibliography

STEP V : The following documents are to be attached with the Final Project Report.

- Approval letter from the supervisor (Annexure-IA)
- Student's declaration (Annexure-IB)
- Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

Guidelines for evaluation:

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate. The evaluation scheme shall be as follows:

Project Report	Power Point Presentation & Viva
75 marks	25 marks

Annexure-IB
Student's Declaration

Ihereby declare that the Project Work with the title (in block letters).....
submitted by me for the partial fulfilment of the degree of B.Sc. Honours in Chemistry is my original work and has not been submitted earlier to any other University /Institution for the fulfilment of the requirement for any course of study.

I also declare that no chapter of this manuscript in whole or in part has been incorporated in this report from any earlier work done by others or by me. However, extracts of any literature which has been used for this report has been duly acknowledged providing details of such literature in the references.

WORKSHOP

Course Code: CHY2633

Credit Units: 01

Course Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two way. The trainer has to make sure that the aspects covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

- Nuclear Chemistry• Modern trend in Inorganic Chemistry
- Modern trend in Physical Chemistry• Modern trend in Organic Chemistry
- Nanotechnology and its applications• Green Chemistry
- Polymer Chemistry• Environmental Chemistry
- Pharmaceuticals
- Food Technology
- Agriculture Chemistry
- Computational Chemistry

These themes are merely indicative and other recent and relevant topics of study may be included.

Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

1. Relevant study material and references will be provided by the trainer in advance.
2. The participants are expected to explore the topic in advance and take active part in the discussions held
3. Attending and Participating in all activities of the workshop
4. Group Activities have to be undertaken by students as guided by the trainer.
5. Evaluation of workshop activities would be done through test and quiz at the end of the workshop.
6. Submitting a write up of at least 500 words about the learning outcome from the workshop.

Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

- Case Study
- Simulation
- Business Planning
- Quiz
- Quality analysis & characterization
- Identification and preparation of materials

Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total

FCH2102	INTRODUCTION TO FORENSIC SCIENCE	L	T	P	C
Version	Date of Approval: December, 2021	2	0	0	2
Pre-requisites/Exposure	Nil				
Co-requisites					

Catalog Description

This course is designed to provide an insight on introduction to forensic science at the undergraduate level. The main objective is to impart essential theoretical knowledge on understanding of forensic fundamentals at laboratory and crime scene.

Course Objective:

The course focuses on the following objectives-

- Developing an understanding and appreciation for the scope of Forensic Sciences.
- Develop an understanding on historical development, Mobile Forensic Units and Expert's testimony.
- Develop brief knowledge of the functions and services provided by the Forensic Laboratories

Course Outcomes

On completion of this course, the students will be able to

CO1. Identify, describe, and recognize forensic science and its functioning.

CO2. Recognize, classify, and translate fundamental principles of forensic science.

CO3. Apply knowledge of physical evidence in solving crime cases.

Course Contents:

Modules	Blooms level*	Number of hours
Module I: Brief description of Forensic Science Definition, Description, Principles, Concept, Needs and scope. History of Forensic Science and Forensic Science Labs; Progressive development and transformation of Forensic Science Labs, Role of Directorate of Forensic Science Services.	L1	8
Module II: Forensic Science Laboratories Main Authority, Organizational structure of Forensic Science Laboratory – roles and responsibilities, Sections/ Divisions, Services provided, Process of report writing and submission to court. Mobile Forensic Science Laboratory – their distribution in India, functions, need and utility. Calibration of testing laboratories (ISO).	L1, L2	10
Module III: Evidence Applicability in Court Definition, Various types of evidence, Laws of evidence, Expert's testimony and admissibility of scientific evidence in Court of Law.	L1, L3	6

*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation

FCH2103	FUNDAMENTALS OF CRIME SCENE INVESTIGATION	L	T	P	C
Version	Date of Approval: December, 2021	2	0	0	2
Pre-requisites/Exposure	Nil				
Co-requisites					

Catalog Description

This course is intended to provide students an insight on fundamentals of crime scene investigation. The students will learn to reconstruct the various scenes of crimes and collect, preserve, package and report the evidence collected from crime scene.

Course Objective:

The course focuses on the following objectives-

- Developing an understanding and application of Crime scene Investigation.
- Develop an understanding on concepts of crime scene and its types.
- Give a brief description on various techniques used for recording of the crime scene.
- Develop comprehensive knowledge on Crime scene reconstruction and significance of physical evidence.

Course Outcomes

On completion of this course, the students will be able to

CO1. Identify and recognize physical evidence

CO2. Acquire skills in handling scientific instruments and evidence collection.

CO3. Examine and analyze evidence in laboratory experiments.

CO4. Reconstruct the scene of crime and form expert opinion.

Course Contents:

Modules	Blooms level*	Number of hours
Module I: Crime Scene and its Management Defining a crime and crime scene, Importance of crime scene, Problems associated with crime scenes (indoor and outdoor), Location and processing of Crime Scene. Introduction to Crime Scene Management, Handling clues and evidence.	L1, L2	6
Module II: Types of Crime Scenes Types of crime scenes, Primary, Secondary crime scene, Mobile, Indoor and Outdoor crime scenes; Difference between trace and physical evidence, searching techniques used for locating physical evidences at scene of crime.	L2, L3	6
Module III: Recording and Documentation of Crime scene Crime Scene documentation, Barrication of Crime Scene, Crime Scene Photography, Videography; Sketching; Notes making.	L3, L4	6
Module IV: Crime Scene Reconstruction Procedure and requirement for Crime Scene Reconstruction, Modus operandi, Expert team constitution for different crime scenes, Roles of Investigating Officer.	L4	6

*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis,

FCH2108	CRIME SCENE INVESTIGATION LAB	L	T	P	C
Version 1.1	Date of Approval: December, 2021	0	0	4	2
Pre-requisites/Exposure	Nil				
Co-requisites					

Catalog Description

This course will give students the basic experimental knowledge of working in undergraduate lab i.e. investigation and sketching of indoor and outdoor crime scene, notes making, searching and packaging and forwarding of evidence.

Course Objective:

The students will understand & perform experiments relating to:

- Investigation of crime scene.
- Sketching of outdoor/ indoor scene of crime
- Packaging and forwarding of Evidence

Course Outcomes

On completion of this course, the students will be able to

CO: Investigate indoor crime scene.

CO2: Investigate outdoor crime scene.

CO3: Search, package and preserve the evidence from crime scene.

Course Contents:

Modules	Blooms level*	Number of hours
1. Investigation and sketching of indoor scene of crime.	L1, L3	6
2. Investigation and sketching of outdoor scene of crime.		
3. Crime Scene Photography: indoor, outdoor.	L1, L2, L3	6
4. Parts of camera.		
5. Searching of crime scene.	L2, L3	6
6. Notes making.		
7. Packaging and forwarding of physical evidences.	L3	6
8. Envelop making and Druggist fold method.		
9. To study the Sealing procedure of physical evidence.		

*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation

Suggested Readings:

FCH2107	HUMAN ANATOMY AND PHYSIOLOGY	L	T	P	C
Version	Date of Approval: December, 2021	2	1	0	3
Pre-requisites/Exposure	Nil				
Co-requisites					

Catalog Description

This course will help the students to understand important fundamental concepts of human anatomy and physiology at the undergraduate level. The main objective is to prepare students for the study of the basic tissues, respiratory system, cardiovascular system, excretory system, nervous system, endocrine system and fluid electrolytes etc.

Course Objective:

To Explore the Fundamental Concepts of Human anatomy and Physiology.

1. To provide students with basic understanding of tissues, cells, membranes etc.
2. To provide students with basics of respiratory, cardiovascular, excretory system.
3. To give students basic concepts of central nervous system, endocrine and digestive system.

Course Outcomes

On completion of this course, the students will be able to

CO1. Understand salient features about calibration, crystallization and distillation.

CO2. Determine Melting Points of Organic Molecules.

CO3. Determine boiling Points of Organic Molecules.

CO4. Understand the use of chromatographic techniques in purification of organic compounds.

Course Contents:

Modules	Blooms level*	Number of hours
Module I: Tissue Epithelial Tissue, Connective Tissue, Muscle Tissue (Skeleton, Smooth and Cardiac muscles: Anatomy and Physiology), Nervous tissue (Neuroglia, Neuron, Membrane potential, Synapse, Neurotransmitters and Receptors), Skeleton tissue (Bones and Cartilages, Ligament, Tendon, Joints), Covering and Lining Membranes Respiratory System Anatomy; Nose and Paranasal Sinuses, Pharynx, Larynx, Trachea, Bronchi and Subdivisions, Lungs and Pleurae: Mechanics of Breathing; Pressure Relationships in the Thoracic Cavity, Pulmonary Ventilation, Physical Factors Influencing Pulmonary Ventilation, Respiratory Volumes and Pulmonary Function: Gas Exchanges Between the Blood, Lungs, and Tissues; Basic Properties of Gases, Composition of Alveolar Gas, External Respiration, Internal Respiration: Transport of Respiratory Gases by Blood Oxygen Transport, Carbon Dioxide, Bohr effect, Haldane Effect, Chloride shift, Control of Respiration	L1, L2 and L3	10
Module II: Cardiovascular System Heart Anatomy; Coverings of the Heart, Auricles, Ventricles, Heart Valves;	L1, L2, L3	8

FCH2201	PHYSICAL EVIDENCE IN FORENSIC SCIENCE	L	T	P	C
Version 1.1	Date of Approval: December, 2021	2	0	0	2
Pre-requisites/Exposure	Nil				
Co-requisites					

Catalog Description

This course will help the students to learn the collection, packaging, preservation and analysis of physical evidence from indoor, outdoor and mobile crime scenes.

Course Objective: The course focuses on following objectives-

1. Developing an understanding and application of Forensic Science and significance of various physical evidence.
2. Develop an understanding on Expert's testimony.
3. Develop comprehensive knowledge on Procedure and examination in the Court of Law.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Recognise and identify best methods of handling and processing of physical evidence.
- CO2. Distinguish between types of crime scenes and linking suspects to crime scene.
- CO3. Apply advanced knowledge and forensic concepts in crime solving.
- CO4. Examine and prepare report and expert opinion.

Course Contents:

Modules	Blooms level*	Number of hours
Module I: Introduction and Handling of Physical Evidence Definition, Types and significance of Physical Evidence, Collection, Packaging, Preservation and Forwarding of evidence: Biological (urine, blood, semen, saliva, hair), Chemicals, poisons, firearms, fingerprints and tool marks.	L1, L2, L3	6
Module II: Crime and Suspect Linking a Crime Scene with the suspect through field notes, witnesses and interrogation, Reconstruction of crime scene and associative/ corroborative evidence.	L2	6
Module III: Analysis of Physical evidence Examinations, report making, chain of custody, report closing. Search and seizure, privilege against self-incrimination, Subpoenas deposition, Miranda rights, Condemned of court, FIR, Types of cognizable and non-cognizable offences.	L1, L2	6
Module IV: Examination in the Court Direct examination, cross- examination and re-examination of Prosecution lawyer and Defence lawyer and Court presentation, Law of evidence: testimonial and real evidence.	L2, L3	6

*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation

FCH2202	FINGERPRINT SCIENCE	L	T	P	C
Version 1.1	Date of Approval: December, 2021	2	1	0	3
Pre-requisites/Exposure	Nil				
Co-requisites					

Catalog Description

This course will help the students to understand basic of fingerprint science and their systematic classification.

Course Objective: The course focuses on following objectives-

1. Developing an understanding and appreciation for the scope of Fingerprints Examination.
2. Develop an understanding on various methods of development of Fingerprints.
3. Develop comprehensive knowledge on fingerprint patterns, fingerprint classification, the various methods of fingerprint development- physical and chemical.

Course Outcomes

On completion of this course, the students will be able to

CO1. Identify and outline various types of fingerprints patterns

CO2. Distinguish and categorise characteristics of fingerprints for proper collection and preservation.

CO2. Classify fingerprints for case solving and matching of suspect prints with crime scene evidence.

CO3. Apply advanced knowledge of Automated fingerprints identification for forensic examination in court of law.

Course Contents:

Modules	Blooms level*	Number of hours
Module I: History and Development of Fingerprinting Origin & History of fingerprints, Principles of Fingerprint identification, Searching, location and significance of fingerprints in criminal investigation.	L1, L2	6
Module II: Introduction of Fingerprint and its characteristics Biological significance of skin pattern, Types of fingerprints, Description of Index Card; Rolled and plain prints, Fingerprint characteristics: class and individual, Collection, lifting and preservation of fingerprints, Photography of latent fingerprints and presentation of fingerprint evidence in court.	L2,L3	8
Module III: Classification of Fingerprints Henry's system of classification, Batley's Single Digit classification, Extension of Henry's system of classification. Primary, secondary, sub-secondary, major, Second sub-secondary, key and final classifications	L3,L4	8
Module IV: Fingerprint Developmental techniques Methods of lifting and developing latent fingerprints – Physical methods - Powder method (Black, silver, florescent, red, yellow), Iodine fuming etc. Chemical methods - Ninhydrin, Silver nitrate method.	L4,L5	8
Module V: AFIS Introduction, history, instrumentation, processing and applications, need and scopes of AFIS.	L3	6

FCH2203	METRIC SYSTEM & PHYSICAL PROPERTIES OF EVIDENCES	L	T	P	C
Version 1.1	Date of Approval: December, 2021	2	1	0	3
Pre-requisites/Exposure	Nil				
Co-requisites					

Catalog Description

This course introduces students to the characteristics and properties of different evidences like glass, soil, paint, hair and fibre, which are normally encountered at the scene of crime.

Course Objective: The course focuses on following objectives-

1. Develop an understanding on various methods of development of Fingerprints.
2. Develop comprehensive knowledge on fingerprint patterns, fingerprint classification, the various methods of fingerprint development- physical and chemical.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Give appropriate handling and processing of physical evidence.
- CO2. Apply forensic aptitude in case solving and analyzing physical evidence.
- CO3. Use advanced knowledge and forensic concepts to propose examination in court of law.

Course Contents:

Modules	Bloom's level*	Number of hours
Module I: The Metric System Introduction to the metric system, Introduction to prevalent physical evidence (soil, glass, fibre, hair and liquids).	L1	6
Module II: Glass Examination Glass: Composition (organic and inorganic elements), Analytical and chemical examination, Comparing glass fragments, glass fractures.	L1, L2	8
Module III: Paint Examination Introduction to paint chemistry, types of paints and their composition, forensic examination of paints (household and automobile).	L1, L2	6
Module IV: Soil examination Composition of soil (organic and inorganic), Properties (Colour, density, size distribution of soil particles), Collection and preservations of soil, Mineral and chemical analysis of soil, Density gradient techniques. Definition, composition, types, physical and chemical analysis of concrete and cement.	L1, L2, L3	8
Module V: Introduction to various marks Definition, nature, types, significance and examination of tool marks, tyre marks, skid marks, tread marks. Definition, nature, types, significance and examination of foot and shoeprints, gait pattern and footprint casting.	L1, L2	8

*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation

FCH2207	FINGERPRINTING LAB	L	T	P	C
Version 1.1	Date of Approval: December, 2021	0	0	1	1
Pre-requisites/Exposure	Nil				
Co-requisites					

Catalog Description

This course introduces students to the experiments of chemical and physical methods of fingerprinting science.

Course Objective: - The students will understand & perform experiments relating to:

1. Packaging and forwarding of physical evidence.
2. Identifying fingerprints, their patterns, footprints and preparing fingerprint chart.

Course Outcomes

On completion of this course, the students will be able to

CO1. Identify various types of fingerprints patterns.

CO2. Distinguish and match the crime scene fingerprint with those of suspects.

CO3. Develop fingerprints using physical and chemical methods of fingerprints development.

CO4. Prepare the fingerprint and footprints chart.

Course Contents

Modules	Blooms level*	Number of hours
1. Prepare fingerprint card and identify the patterns.	L1, L2	2
2. Tape lifting of fingerprint.	L1, L2	2
3. Comparison of fingerprints.	L2	2
4. Ninhydrin method for fingerprint development. 5. Iodine fuming method for fingerprint development. 6. Silver nitrate method for fingerprint development. 7. Powder method of fingerprint development.	L2, L3, L4	6

FCH2208	METRIC SYSTEM LAB	L	T	P	C
Version 1.1	Date of Approval: December, 2021	0	0	1	1
Pre-requisites/Exposure	Nil				
Co-requisites					

Catalog Description

This course introduces students to the experiments of chemical and physical methods of physical evidence

Course Objective: - The students will understand & perform experiments relating to:

1. Analysis of physical evidence
2. Identifying different Physical evidence on the basis of their physical properties.
3. Determine pH, density and refractive index of various physical evidence

Course Outcomes

On completion of this course, the students will be able to

- CO1. Identify various types of physical evidence.
- CO2. Distinguish and match the crime scene exhibits.
- CO3. Examine chemical properties of evidence.
- CO4. Examine physical properties of evidence.

Course Contents

Modules	Blooms level*	Number of hours
1. Analysis of Glass on the basis of physical characteristics.	L1, L2	4
2. Comparison of Paint chips on the basis of physical characteristics using microscope.		
3. Comparison of Glass fragments using Density gradient method.	L1, L2	2
4. Comparison of soil samples using Density gradient method.	L2	2
1. Examination of cement and concrete samples.	L2, L3, L4	4
2. Comparison of fibers samples on the basic of physical and chemical properties.		

*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation

FCH2302	FORENSIC SEROLOGY	L	T	P	C
Version 1.1	Date of Approval: December, 2021	2	1	0	3
Pre-requisites/Exposure	Nil				
Co-requisites					

Catalog Description

This course will help the students to learn the collection, packaging, preservation and analysis of serological evidence from crime scenes.

Course Objective: This course will cover:

1. Complete and thorough knowledge regarding the various aspects of forensic serology
2. Blood and its detailed study for identification
3. Importance of body fluids and their forensic significance

Course Outcomes

On completion of this course, the students will be able to

- CO1. Study and describe basic properties of blood and its methods of collection and packaging.
CO2. Perform and identify chemical and microscopic examinations.
CO3. Apply spectroscopic methods of analysis of serological evidence.
CO4. Explain and identify body fluids and their examination.

Course Contents:

Modules	Blooms level*	Number of hours
Module 1: Blood and its Properties The nature of blood, collection, preservation and packing of blood evidence, procedures and precautions. ABO system, Rh system and MN system; Techniques for the determination of blood groups.	L1, L2	9
Module 2: Chemical and microscopic Tests used in Blood Analysis Identification of bloodstains by microscopic methods, Catalytic tests, crystal tests.	L1, L2	9
Module 3: Species of Origin & Grouping of Bloodstains Application of Spectrophotometric method, chromatographic and immunological methods (Ring, Precipitin, Ouchterlony, reverse agglutination, normal/mixed agglutination).	L1, L2	9
Module 4: Introduction and analysis of Body Fluids Introduction to various body fluids, their nature and characteristics and Forensic analysis of Semen, Saliva, Urine, Sweat etc.	L1, L2, L3	9

FCH2312	QUESTIONED DOCUMENTS-1	L	T	P	C
Version 1.1	Date of Approval: December, 2021	2	1	0	3
Pre-requisites/Exposure	Nil				
Co-requisites					

Catalog Description

This course will help the students to learn operating various equipments used in questioned document examinations such as video spectral comparator, ESDA etc. and study the basic fundamentals of differentiating handwritings and forgery detection.

Course Objective: The course focuses on the following objectives-

1. Developing an understanding and appreciation for the scope of Handwriting Identification and Examination.
2. Develop an understanding of handwriting and their characteristics, principles of identification.
3. Give a brief description on various methods of their detection and examination.
4. Develop comprehensive knowledge on typewritten documents, common styles and their examination.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Identify and describe fundamentals of handwriting and signatures.
- CO2. Translate and comprehend various equipments for document examination.
- CO3. Apply methods of analysis signature forgery.
- CO4. Examine and distinguish between typewritten and computer generated documents.

Course Contents:

Modules	Blooms level*	Number of hours
Module I: Introduction to Questioned Documents Definition: Documents, questioned documents and its classification and the type of cases encountered; Importance, nature and problems of documents, Location, collection, handling and presentation of documents, adequacy of exemplars and standards.	L1, L2	8
Module II: General Equipment for Examination Hand lens, Camera, Compound Microscope, Stereo microscope, TLC, Transmitted light source, UV-IR radiation chamber and Oblique Light source, ESDA, VSC.	L1, L2, L3	6
Module III: Handwriting Characteristics Identification – principle, class and individual handwriting characteristics, external, factors affecting handwriting characteristics, principles of handwriting identification.	L1, L2, L3	8
Module IV: Signatures Authentic Signatures, Simulated signatures, disguised signatures, traced signatures, and their characteristics	L1, L2, L3	6
Module V: Typewritten and Computer-generated documents Examination and Comparison of typewritten documents. Working of photocopiers printers and scanners, examination of	L1, L2	8

photocopied/ printed and scanned documents.

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

FCH2313	RESEARCH METHODOLOGY & STATISTICS	L	T	P	C
Version 1.1	Date of Approval: December, 2021	2	1	0	3
Pre-requisites/Exposure	Nil				
Co-requisites					

Catalog Description

This course will help the students to learn operating various research methodology and use of statistics which would enable students to compute their project work data etc.

Course Objective: This course objective is to introduce the student with the:

1. The research process: conceiving, designing, conducting and analyzing.
2. Methods of statistical description and analysis.
3. Ethical issues about research.
4. Graphical presentation of data.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Identify and describe fundamentals of handwriting and signatures.
- CO2. Translate and comprehend various equipments for document examination.
- CO3. Apply methods of analysis signature forgery.
- CO4. Examine and distinguish between typewritten and computer-generated documents.

Course Contents:

Modules	Blooms level*	Number of hours
Module I: Introduction Definition, concept and research in science and forensic science.	L1, L2	9
Module II: Methods of Research Introduction to Research Methodology; Experimental research and non – experimental research design. Data collection method: Observation, questionnaires, interview, schedules, case study methods, types of data, graphical representation of data, parts of statistical table.	L1, L2, L3	9
Module III: Statistics-I Measures of central tendency: Mean, Mode, Median. Measures of dispersion: Range, Quartiles, Percentiles, Deciles, Standard deviation, Variance, Skewness, Kurtosis. Simple correlation method (Karl Pearson method) and regression on two lines.	L1, L2, L3	9
Module IV: Statistics-II Test of significance, one tailed test, two tailed test, parametric (f-test, z-test, t-test, chi square test) and non-parametric statistics (sign test, rank test).	L1, L2, L3	9

*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation

Version 1.1	Date of Approval: December, 2021	0	0	4	2
Pre-requisites/Exposure	Nil				
Co-requisites					

Catalog Description

This course will help the students to perform various chemical tests on serological evidences such as blood, saliva, urine etc. and presence of toxicological evidences such as poisons and alcohol.

Course Objective: The students will understand & perform experiments relating to:

1. Analysis of blood, biological fluids and alcohol.
2. Thin layer chromatography for poisons.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Perform tests on blood
CO2. Perform tests on saliva and urine.
CO3. Perform tests on alcohol and poisons.

Course Contents:

Modules	Blooms level*	Number of hours
1. Analyse different blood groups from the blood found at crime scene. 2. Perform catalytic test for blood 3. Perform crystal tests for blood.	L2, L3, L4	4
4. Analyse biological fluid (saliva). 5. Analyse biological fluid (urine).	L3, L4	4
6. Analyse alcohol, acetone, chloroform 7. Separate metallic poison by thin layer chromatography (Arsenic, mercury, bismuth, Antimony).	L3, L4	4

FCH2315	CYBER FORENSICS	L	T	P	C
Version 1.1	Date of Approval: December, 2021	2	1	0	3
Pre-requisites/Exposure	Nil				
Co-requisites					

Catalog Description

This course will help the students to understand basic of computational forensics and its application in cyber-crime case solving.

Course Objective: In recent years, digital forensics has emerged as an essential source of tools and approaches for facilitating digital preservation and curation, specifically for protecting and investigating evidence from the past. Institutional repositories and professionals with responsibilities for personal archives can benefit from forensics in addressing digital authenticity, accountability and accessibility.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Identify and outline the hierarchy and types of digital storage media.
- CO2. Describe logic gates and data representation.
- CO2. Describe operating system and its usage for forensic evaluation.
- CO3. Apply advanced knowledge of digital forensics for collection and examination of case exhibits.

Course Contents:

Modules	Blooms level*	Number of hours
Module I: Basics of Digital Forensic Basics of digital forensic, computer forensic, introduction to cyber forensic Computer organization, Components of computers – Input & Output devices, CPU Memory Hierarchy and types of Memory (RAM and ROM and their types) external storage devices. Application Software and System Software, Introduction to IT act, ethical hacking	L1, L2, L3	9
Module II: Data Representations Integers, real, binary, octal, hexadecimal & their conversions Logic gates – Negation, OR, AND, XOR etc. and their combinations	L2, L3	9
Module III: Introduction to Operating System Basics of Operating System, memory structure, concurrency, scheduling, synchronization & memory management, process description and control Introduction to Operating System (Batch Operating System, Distributed operating system, etc.) Introduction to Windows and Linux operating System	L3, L4	9
Module IV: Introduction to Digital evidences Collection, preservation of evidences, forensic imaging, data retrieval, mobile forensic, techniques in digital forensic.	L4	9

FCH2412	QUESTIONED DOCUMENTS-II	L	T	P	C
Version 1.1	Date of Approval: December, 2021	2	1	0	3
Pre-requisites/Exposure	Nil				
Co-requisites					

Catalog Description

This course will help the students to understand the importance of questioned documents and their examination. Students will also learn examination of questioned documents.

Course Objective: The objective of this course is-

1. To develop an understanding and appreciation for the scope of Questioned Documents.
2. To develop an understanding on different types of questioned documents, the types of forgeries and disguise generally encountered.
3. To provide brief description on general equipment used in examination of Questioned Documents

Course Outcomes: On completion of this course, the students will be able to

CO1 Learn the basic concept and classification of questioned documents.

CO2 Learn the methods to detect alterations and examine paper and ink.

CO3 Learn the procedure to present the case in court of law.

CO4 Learn the basic concept and classification of security documents.

Course Contents:

Modules	Blooms level ³	Number of hours
Module I: Alteration in Questioned Documents Forgery and its characteristics, erasures, obliteration, alteration and addition. Detection and deciphering of indented writing, charred documents, invisible and secret writings	L1, L2	9
Module II: Ink and Paper Examination Composition of major classes of inks (carbon ink, fountain ink etc.), analysis of writing inks and ink dating, pencil lead examination and age of documents. Physical characteristics of paper, watermark examination, fibre analysis, chemical and trace elements analysis.	L3, L4	9
Module III: Report Writing and Case Presentation Comparison with standards: admitted and specimen samples, report writing, Components of report, Presentation of report in questioned document examination cases in Court of Law.	L1, L2	6
Module VI: Security Documents and Their Examinations Introduction of security documents, Types of security documents, Examination of Passports and fake currency notes, Latest introduced security features for identification of genuine bank notes (new series) of 50, 100, 200, 500, 2000 rupees. FCH2402	FUNDAMENTALS OF FORENSIC PHOTOGRAPHY	L	T	P	C
Version 1.1	Date of Approval: December, 2021	2	1	0	3
Pre-requisites/Exposure	NIL				
Co-requisites					

Catalog Description

This course will help the students to understand the fundamentals of photography. Students will also learn methods to develop photographs and their importance in forensic science.

Course Objective: This course is designed to:

1. Provide foundation knowledge of photography
2. Develop an understanding and application of Photography in Forensic Science and CSI

Course Outcomes: On completion of this course, the students will be able to:

CO1 Describe the importance of photography in forensic science.

CO2 Classify different kinds of photography used at crime scene.

CO3 Distinguish between various light sources used in forensic photography at crime scene.

CO4 Apply methods of photography at crime scene.

Course Contents:

Modules	Blooms level*	Number of hours
Module I: Introduction Introduction to forensic photography, required equipment for photography, Importance of Forensic photography in a crime scene investigation, indoor and outdoor crime scenes photography.	L1, L2	8
Module II: Types of Photography Surveillance photography – Cameras, Type and accessions for surveillance photography, Aerial photography, Underwater photography, Videography.	L1, L2	6
Module III: Photo Prints Various methods for developing photographs, chemical processing, negative development, Films- introduction and types.	L1, L2	6
Module IV: Photography and Crime Scene Photographic aspects of physical injuries, Use of photography in reconstruction the scene of crime (Indoor and outdoor) and its presentation in the Court of Law.	L2, L3	8
Module V: Guidance Documentation and High-tech Photography for Crime Scene Image magnification, UV and IR illumination in Photography, Photography of Art factual evidence (Bloodstain, fingerprint, imprints, and micro evidence), High-speed photography, legal aspects of visual evidence.	L3, L4	8

*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation

FCH2403	FORENSIC ANTHROPOLOGY	L	T	P	C
Version 1.1	Date of Approval: December, 2021	2	1	0	3
Pre-requisites/Exposure	NIL				
Co-requisites					

Catalog Description

This course will help the students to understand the basic meaning of forensic anthropology and its utility in investigation of medico-legal cases. This course will also describe the methods to examine the human skeleton.

Course Objective:

The given course is designed to:

1. Provide the knowledge about the basics about physical anthropology
2. Develop comprehensive understanding of different techniques of determining the identity of unknown remains.
3. Provide the understanding of process of forensic facial reconstruction and its utilization in personal identification

Course Outcomes

On completion of this course, the students will be able to:

CO1 Describe the basic concepts of anthropology.

CO2 Learn the methods to identify the bones.

CO3 Learn the methods to determine height and race from human skeleton.

CO4 Learn the methods to identify the bones and human skeleton.

Course Contents:

Modules	Blooms level*	Number of hours
Module I: Introduction to Forensic Anthropology Definition, scope and application of Forensic Anthropology and related sciences, importance and need, issues related to personal identification.	L1	9
Module II: Identification from Bones Attribution of Sex, Estimation of Age (humerus, radius, ulna, fibula, tibia, femur, pelvic bone, foot and hand).	L1, L2	9
Module III: Height and Race Determination Race and height determination from long bones and their medico legal implication. Establishment of Partial and Complete identity of skeletal material and dead bodies.	L1, L2	9
Module IV: Identification from Human Skull Morphology of human skull, determining the age, race and sex of the skull and its medicolegal implications.	L1	9

*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation

Suggested Readings:

- Krogman, W. M. and M. Y. Iscan: Human Skeleton in Forensic Medicine.
- Modi: A Text Book of Medical Jurisprudence and Toxicology.
- Nath, S.: Forensic Anthropology

Version 1.1	Date of Approval: December, 2021	0	0	2	1
Pre-requisites/Exposure	NIL				
Co-requisites					

Catalog Description

This course will help the students to understand the concepts of forensic anthropology and its application in estimating age, sex and race from long bones and human skeleton.

Course Objective: - The students will understand and perform experiments related to:

1. Determination of age, sex and stature from skull.
2. Determination of age, sex and stature from long bones of human body.

Course Outcomes

The main outcomes of the course are given below:

CO1. Students will learn the methods to identify human skeleton.

CO2. Students will learn the methods to identify human skeleton

CO3. Students will learn the methods to estimate height from long bones.

CO4. Students will learn the methods to determine sex and age from skull, pelvis and mandibular bone.

Course Contents:

Modules	Blooms level*	Number of hours
1. Identification of human skeleton system. 2. Identification of various bones (Pelvic and Skull bones). 3. Estimation of height using long bones. 4. Determination of sex from skull, pelvis and mandibular bone. 5. Determination of age using skull.	L1, L2, L3	24

FCH2414	QUESTIONED DOCUMENTS LAB	L	T	P	C
Version 1.1	Date of Approval: December, 2021	0	0	2	1
Pre-requisites/Exposure	NIL				
Co-requisites					

Catalog Description

This course will help the students to understand the methods to examine questioned documents. Students will understand the methods to examine currency notes and security documents.

Course Objective: - The students will understand and perform experiments related to:

1. Examination of handwriting
2. Examination of security documents
3. Comparison of bite marks and will visit mortuary

Course Outcomes

The main outcomes of the course are given below:

CO1. Students will learn the methods to identify class and individual characteristics of handwriting.

CO2. Students will learn the methods to examine questioned and security documents using optical methods.

CO3. Students will learn the methods to examine currency notes and security documents.

CO4. Students will learn the methods to identify bite marks.

Course Contents:

Modules	Blooms level*	Number of hours
1. Handwriting analysis based on class and individual characteristics. 2. Examination of documents under different light sources transmitted, oblique, UV. 3. Identification of genuine and fake currencies 4. Identification features of security documents 5. TLC of inks 6. Visit for autopsy	L1, L2, L3	24

FCH2415	WILDLIFE FORENSICS	L	T	P	C
Version 1.1	Date of Approval: December, 2021	2	1	0	3
Pre-requisites/Exposure	NIL				
Co-requisites					

Catalog Description

This course will help the students in understanding the concept of wildlife forensics. Students will also learn the risk management standards.

Course Objective: During the course the students will be able to

1. Learn the fundamentals of wildlife forensics
2. Explain the diversity and utility of variety of animal evidence
3. Explain the benefits of risk management and the structure of ISO 31000:2009 standard

Course Outcomes

The main outcomes of the course are given below:

CO1 To describe fundamental knowledge of wildlife forensics and its basic concepts.

CO2 To describe methods to examine evidence recovered in case of wild life forensic cases.

CO3 Understand the concept of risk management and its benefits.

CO4 Understand the components of the Risk framework.

Course Contents:

Modules	Blooms level*	Number of hours
Module I: Introduction to Wildlife Forensics Introduction to Wildlife Forensics, basic elements of wildlife forensics, application of forensics in wildlife crimes, basic analytical techniques in wildlife forensics.	L1	9
Module II: Evidence Examination Identification of some endangered species of plants and animals, Wildlife life protection Act, examination of pug marks, horn, skin, fur and hair, nail and teeth, wood etc. Important case studies, ethical issues in wildlife forensics.	L1, L2	9
Module III: Introduction to Risk Management and its benefits Introduction Risk Management, Risk Management in organizations and risk ownership, Risk Management standards – Benefits of Risk Management.	L1, L2	9
Module IV: ISO 31000 - Elements of Risk Management ISO 31000 overview, PDCA cycle - Elements and Purpose, Principles of Risk Management, Relationship between Principles, Framework and Process, Understanding the components of the Risk framework, Designing the Framework with Mandate and Commitment.	L3	9

FCH2431	TERM PAPER	L	T	P	C
Version 1.1	Date of Approval: December, 2021	2	1	0	3
Pre-requisites/Exposure	NIL				
Co-requisites					

Catalog Description

The motive of this course is to understanding as well as application of the knowledge gained by the students. The aim of the term paper is to provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking a significant practical unit of examining and analyzing various aspects of Forensic Science & its application at a level commensurate with the learning outcomes of the various courses taken up them in the ongoing semester

Course Objectives

The objective of this course is to

1. To judge the understanding as well as application of the knowledge gained by the students.
2. Provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking a significant practical unit of examining and analyzing various aspects of Forensic science & its application at a level commensurate with the learning outcomes of the various courses taken up them in the ongoing semester.
3. A term paper is primarily a record of intelligent reading in several sources on a particular subject. The students will choose the topic at the beginning of the session in consultation with the faculty assigned.

Course Outcomes

Through this course,

CO1 Students with get an opportunity to further enhance their knowledge in a field of forensic of their choice by practical/ hands-on training.

CO2 Students will analyze various aspects of core forensic science courses like toxicology, chemistry, fingerprints, forensic physics, questioned documents, serology and applied forensic science courses at a level commensurate with the learning outcomes of the various courses taken up them in the ongoing semester.

CO3. Students will enhance their knowledge by extensive literature survey.

Course Contents:

Modules	Blooms level*	Number of hours
<ol style="list-style-type: none"> 1. The term paper will be related to the contemporary industrial issue and the topic will be given by the department. 2. The presentation of the term paper is scheduled to be held before the commencement of Semester examinations. 3. The paper will carry 100 marks that will be marked on the basis of understanding and organization of content based on the literature review. The Bibliography shall form an important part of the paper. 4. Examples of a few broad areas for term paper (List is indicative, not exhaustive) <ol style="list-style-type: none"> a. Forensic Toxicology b. Forensic Anthropology c. Physical chemistry d. Handwriting and Typewriting Analysis 	L1, L2 and L3

FCH2432	PROJECT	L	T	P	C
Version 1.1	Date of Approval: December, 2021				3
Pre-requisites/Exposure	NIL				
Co-requisites					

Catalog Description

The motive of this course is to understand the meaning of research in which they will learn many things related to research. They will know the handling and working principle of many instruments whichever they will use during research.

Course Objectives

The aim of the project is to:

Provide the students with an opportunity to further enhance their intellectual and personal development in the chosen field by undertaking a significant practical experience.

Scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information/data, leading to production of a structured report.

Course Outcomes

CO1 Through this course, Promotes the development of a coherent learning programme

CO2 Helps to guide students through the programme

CO3 Enables an institution to demonstrate how a particular lecture course or paper contributes to the overall aims of its teaching.

Course Contents:

Modules	Blooms level*	Number of hours
Components of a Project Report The outcome of Project Work is the Project Report. A project report should have the following components: 1) Cover Page: This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University. 2) Acknowledgement: Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study. 3) Table of Content: Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers. 4) Body of the Report: The body of the report should have these four logical divisions a) Introduction: This will cover the background, rationale/need/justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning. b) Conceptual Framework/National and International Scenario: (relating to the topic of the Project). Modes of Evaluation:

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as “Absent” in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate. The evaluation scheme shall be as follows:

Examination Scheme:

Project Report	Power Point Presentation and Viva
75 marks	25 marks

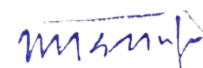

CO, PO and PSO Mapping:

Annexure-I B

Student's Declaration

Ihereby declare that the Project Work with the title (in block letters).....

Submitted by me for the partial fulfilment of the degree of B.Sc. in Forensic science is my original work and has not been submitted earlier to any other University /Institution for the fulfilment of the requirement for any course of study.

I also declare that no chapter of this manuscript in whole or in part has been incorporated in this report from any earlier work done by others or by me. However, extracts of any literature which has been used for this report has been duly acknowledged providing details of such literature in the references.

WORKSHOP/ CERTIFICATION

Course Code: FCH2433

Credit Units: 01

Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two ways. The trainer has to make sure that the aspect covered is practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

1. Crime Scene Investigation
2. Forensic Toxicology
3. Forensic Anthropology
4. Handwriting and Typewriting Analysis
5. Crime Scene Investigation
6. Criminology, Criminal Law and Police Administration
7. Fingerprint Science
8. Forensic Serology
9. DNA Fingerprinting
10. Wounds and its Medico-Legal Aspects

These themes are merely indicative and other recent and relevant topics of study may be included.

Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

1. Relevant study material and references will be provided by the trainer in advance.
2. The participants are expected to explore the topic in advance and take active part in the discussions held
3. Attending and Participating in all activities of the workshop
4. Group Activities have to be undertaken by students as guided by the trainer.
5. Evaluation of workshop activities would be done through test and quiz at the end of the workshop.
6. Submitting a write up of at least 500 words about the learning outcome from the workshop.

Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

1. Case Study
2. Simulation
3. Quiz
4. Quality analysis and characterization
5. Identification and preparation of materials

Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

FCH2502	DNA FINGERPRINTING	L	T	P	C
Version	Date of Approval: December, 2021	2	1	0	3
Pre-requisites/Exposure	Nil				
Co-requisites					

Catalog Description

This course is designed to provide an insight on introduction to DNA fingerprinting in forensic science at undergraduate level. The main objective of this course is to impart essential theoretical knowledge of chromosomes, its structure, functions, DNA and its application in the field of forensic science.

Course Objective: The objectives of the course are to:

1. Provide basic understanding of genetics in forensic science
2. Provide students with technical skills and competencies in DNA fingerprinting techniques

Course Outcomes

On completion of this course, the students will be able to

CO1. Explain various biological phenomena associated with Forensic Science and the utility of various biological changes in forensic science.

CO2. Describe the principle, types and applications of the centrifugation in forensic science.

CO3. Understand the various types of electrophoresis for the analysis of biological and toxicological samples

CO4. Analyse the biological samples by immunoelectrophoretic.

Course Contents:

Modules	Blooms level*	Number of hours
Module I: Introduction to DNA Fingerprinting Definition, Importance of DNA Fingerprinting in Forensic Science, Structure of DNA, RNA, Chromosome, Nuclear DNA and Mitochondria DNA.	L1	7
Module II: DNA Isolation Techniques Collection and types of evidence for DNA fingerprinting. Different types of DNA Isolation techniques (Organic, Inorganic and Mechanical), FTA cards for isolation of DNA, DNA isolation from different evidence (tissue, hair, bone, blood and seminal stains).	L1, L2	7
Module III: Techniques for DNA Fingerprinting Electrophoresis, Northern and Southern blotting. Polymerase Chain Reaction (Denaturation, annealing and extension, Detection of PCR products).	L3, L4	8
Module IV: Types of DNA Fingerprinting Techniques Mini satellites and Micro-satellites., VNTR and RFLP, AFLP, STRs, SNP and Genotyping.	L3	7

FCH2505	INSTRUMENTATION – BIOLOGICAL	L	T	P	C
Version	Date of Approval: December, 2021	2	1	0	3
Pre-requisites/Exposure	Nil				
Co-requisites					

Catalog Description

This course is intended to provide the basic knowledge about the instruments which can be used for the analysis of biological samples.

Course Objective: The objective of the course is to provide students with practical understanding of working and applications of various instrumentation techniques used in the forensic science laboratory for the analysis of biological evidence.

Course Outcomes

On completion of this course, the students will be able to

CO1. Explain various biological phenomena and utility of various biological changes in forensic science.

CO2. Describe the principle, types and applications of the electrophoresis.

CO3. To understand the various types of immunoelectrophoretic techniques.

CO4: Provide the knowledge about the basics about microscopy

CO5. To develop comprehensive understanding of different microscopes and their uses in examination of forensic exhibits.

Course Contents:

Modules	Blooms level*	Number of hours
Module I: Centrifugation Techniques Basic principles of sedimentation, various types of centrifuges, Density gradient centrifugation, Preparative centrifugation, Analysis of sub-cellular fractions, Ultracentrifuge- Refrigerated Centrifuges	L1	7
Module II: Electrophoretic Techniques General principles, Factors affecting electrophoresis, Types of electrophoresis, Agrose, Polyacrylamide gel electrophoresis, Isoelectric focusing (IEF), Isoelectrophoresis, Preparative electrophoresis, Horizontal and Vertical Electrophoresis	L1, L2	7
Module III: Immuno-chemical Technique Gel 52mmune-diffusion, Immuno-electrophoresis, Radio Immuno Assay (RIA), ELISA, Fluorescence Immuno assay.	L3, L4	7
Module IV: Optical Microscopes Basic working principle, components and forensic applications of Simple microscope, Compound microscope, Comparison microscope and Stereomicroscope.	L2, L3	8
Module IV: Electron Microscopes Basic working principle, instrumentation and forensic applications of Scanning Electron Microscope and Transmission Electron Microscope.	L2, L3	7

FCH2511	DNA FINGERPRINTING LAB	L	T	P	C
Version	Date of Approval: December, 2021	0	0	2	1
Pre-requisites/Exposure	Nil				
Co-requisites					

Catalog Description

This course is intended for students to understand various aspects of toxicological evidence in related field.

Course Objective: - The students will understand & perform experiments relating to:

1. DNA properties, extraction and quantification
2. DNA Isolation techniques

Course outcome: On completion of this course, the students will be able to

CO1. Describe the mechanism DNA extraction.

CO2. Explain the centrifugation technique.

CO3. Discuss the difference between electrophoresis and spectroscopy.

Course Contents:

Modules	Blooms level*	Number of hours
1. DNA extraction (plants/ blood) 2. Centrifugation technique 3. Agrose gel electrophoresis. 4. Immunodiffusion. 5. Spectrophotometry.	L1, L2, L3	24

FCH2515	FORENSIC TOXICOLOGY LAB	L	T	P	C
Version	Date of Approval: December, 2021	0	0	2	1
Pre-requisites/Exposure	Nil				
Co-requisites					

Catalog Description

This course is intended for students to perform various practical in the field of Forensic Chemistry & Toxicology, to isolate different toxic substance, perform thin layer chromatography of several drugs and cations and anions analyses.

Course Objective: - The students will understand & perform experiments relating to:

1. Analysis of various metallic, vegetable, volatile and non-volatile poisons.
2. Perform TLC of poisons, drugs, and inks.

Course outcome: On completion of this course, the students will be able to

- CO1. Demonstrate the isolation techniques of different toxic substances.
CO2. Perform the TLC and analysis of various drugs and poisons.
CO3. Perform various tests to analyze cations and anions.

Course Contents:

Modules	Blooms level*	Number of hours
1. Analysis of metallic poisons. 2. Analysis of volatile poisons (Acetone, Alcohol). 3. Analysis of corrosive poisons (acids, Alkali). 4. TLC of common drugs. 5. TLC of pesticides & insecticides samples 6. Spot test & color test for insecticides and pesticides. 7.	L1, L2, L3	24

FCH2516	ARSON AND EXPLOSIVES	L	T	P	C
Version	Date of Approval: December, 2021	2	1	0	3
Pre-requisites/Exposure	Nil				
Co-requisites					

Catalog Description

This course is intended for students to understand the basics of fire, arson and explosives, its classification, composition and analysis in the field of forensic science.

Course Objective: The objectives of the course are to:

- Provide the scientific knowledge and understanding needed in Fire and Explosion
- Provide illustrations of fire investigation through a wide range of fire and explosion investigation case studies.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Explain Fire chemistry and its forensic significance
CO2. Describe Arson, its types and analysis methods.
CO3. Classify Petroleum products, and their forensic analysis.
CO4. Explain and analyse explosives.

Course Contents:

Modules	Blooms level*	Number of hours
Module I: Arson Introduction, laws related to arson, Forensic importance and prerequisites for the cause of Arson cases; The Arson scene investigation - Collection and preservation of Arson evidence.	L1, L2	7
Module II: Laboratory Examination of Arson Evidence Analysis and identification of flammable liquids, Extraction of ignitable liquid residue from debris, interferences in debris, analysis, and interpretation.	L2, L3	7
Module III: Explosives Introduction to explosives, definition, IED'S, high explosives and low explosives, difference and classification.	L1, L2	7
Module IV: Laboratory examination of bomb and explosive evidence Identifying the explosives, Black and smokeless powder identification, dynamite identification, identifying RDX, PETN, TATP	L3, L4	8

FCH2517	QUALITY MANAGEMENT AND ETHICS	L	T	P	C
Version	Date of Approval: December, 2021	2	1	0	3
Pre-requisites/Exposure	Nil				
Co-requisites					

Catalog Description

This course is intended for the students who have never learned about the quality management and technical requirement in forensic laboratories. A knowledge of the process of accreditation and basic requirements for a testing and calibration laboratory to be accredited is must for the student of forensic science.

Course Objective: The objectives of the course:

- To focus on building a conceptual understanding of quality management in forensic science laboratories.
- To understand the concept and value of ethics in forensic science.

Course Outcomes

On completion of this course, the students will be able to

CO1. Apply the quality management in forensic laboratories.

CO2. Summarize the technical requirements for a forensic laboratory to be accredited.

CO3. Perform sampling, handling of test and calibration items, as well as assuring the quality of test and calibration results and reporting the results in forensic cases.

CO4. Setup the forensic laboratory information management system.

Course Contents:

Modules	Blooms level	Number of hours
Module I: Quality Management System Quality, Total Quality, Quality assurance, Quality control, Quality Planning, Quality Audit: Internal and External Audit, Accreditation, NABL, ISO, IEC, BIS. Quality Management of Laboratories: General requirements for the competence of testing and calibration laboratories – Introduction, Scope, Management requirements: Organization, Quality System, Document Control.	L1, L2	12
Module II: Quality Control Process Management Requirements: Organizational, document control, subcontracting of tests and calibrations control of Non-conforming testing / calibration work, corrective and preventive actions, Management Review. Technical Requirements: Test and calibration methods and their validation, measurements, standards and reference material, traceability, sampling. Good Laboratory Practices (GLP): Fundamental principles of GLP, Organizational Setup, Resources, Raw data and data collection, SOPs, Archives.	L1, L2, L3	12
Module III: Ethics Ethics: Definition, concept of ethics, Ethics in science, Development of a Code of Ethics for Forensic Science.	L1, L2, L3	12

FCH2509	TECHNICAL WRITING IN SCIENCE-1	L	T	P	C
Version	Date of Approval: December, 2021	2	0	0	2
Pre-requisites/Exposure	Nil				
Co-requisites					

Course Objective:

Students will be introduced to learning the written and oral communication of technical information. Assignments include writing and presenting proposals, reports, and documentation. Emphasis on use of rhetorical analysis, computer applications, collaborative writing, and usability testing to complete technical communication tasks in the workplace.

Course Contents:

Modules	Blooms level	Number of hours
Module I: Writing Skills; Selection of topic, thesis statement, developing the thesis; introductory, developmental, transitional, and concluding paragraphs, linguistic unity, coherence and cohesion, descriptive, narrative, expository and argumentative writing.	L1, L2	12
Module II: Technical Writing: Scientific and technical subjects; formal and informal writings; formal writings/reports, handbooks, manuals, letters, memorandum, notices, agenda, minutes; common errors to be avoided.	L1, L2, L3	12
Module III: Documentation Process Understanding Audience/Readers, Collecting and Organizing information, drafting information verbally and visually, Producing Information.	L1, L2, L3	12

FCH2531	TERM PAPER	L	T	P	C
Version	Date of Approval: December, 2021	2	1	0	3
Pre-requisites/Exposure	Nil				
Co-requisites					

Catalog Description

The motive of this course is to understand as well as application of the knowledge gained by the students. The aim of the term paper is to provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking a significant practical unit of examining and analyzing various aspects of Chemistry & its application at a level commensurate with the learning outcomes of the various courses taken up them in the ongoing semester

Course Objectives

The objective of this course is to

- To judge the understanding as well as application of the knowledge gained by the students.
- Provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking a significant practical unit of examining and analyzing various aspects of Chemistry & its application at a level commensurate with the learning outcomes of the various courses taken up them in the ongoing semester.

Course Outcomes

Through this course,

CO1 Students will get an opportunity to further enhance their knowledge in a sector of their choice by undertaking a significant practical unit of examining.

CO2 Students will analyze various aspects of chemistry and applied chemistry at a level commensurate with the learning outcomes of the various courses taken up them in the ongoing semester.

CO3. Students will enhance their knowledge by extensive literature survey.

Course Contents:

Modules	Blooms level*	Number of hours
<ol style="list-style-type: none"> The term paper will be related to the contemporary business issue and the topic will be given by the department. The presentation of the term paper is scheduled to be held before the commencement of Semester examinations. The paper will carry 100 marks that will be marked on the basis of understanding and organization of content based on the literature review. The Bibliography shall form an important part of the paper. Examples of a few broad areas for Term Paper (List is indicative, not exhaustive) <ol style="list-style-type: none"> Crime Scene Investigation Forensic Toxicology Forensic Anthropology Handwriting & Typewriting Analysis Crime Scene Investigation Criminology, Criminal Law & Police Administration 	L1, L2 and L3	-

FCH2533	WORKSHOP	L	T	P	C
Version	Date of Approval: December, 2021	1	0	0	1
Pre-requisites/Exposure	Nil				
Co-requisites					

Catalog Description

This course will help the students to have hands on experience and deep learning of different aspects of chemistry. This will also improve quick learning and communication skills.

Course Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two ways. The trainer has to make sure that the aspects covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Promotes the development of a coherent learning programme.
- CO2. Helps to guide students through the programme.
- CO3. Enables an institution to demonstrate how a particular lecture course or paper contributes to the overall aims of its teaching.
- CO4. Use research findings to advance education theory and practice.

Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

1. Relevant study material and references will be provided by the trainer in advance.
2. The participants are expected to explore the topic in advance and take active part in the discussions held
3. Attending and Participating in all activities of the workshop
4. Group Activities have to be undertaken by students as guided by the trainer.
5. Evaluation of workshop activities would be done through test and quiz at the end of the workshop.
6. Submitting a write up of at least 500 words about the learning outcome from the workshop.

Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

1. Case Study
2. Simulation
3. Quiz
4. Quality analysis & characterization
5. Identification and preparation of materials

Course Contents:

Modules	Blooms level*	Number of hours
The workshop may be conducted on any of the following major themes:	L1, L2 and L3	12
1. Forensic Science Crime Scene Investigation

FCH2616	FORENSIC MEDICINE	L	T	P	C
Version 1.1	Date of Approval: December, 2021	2	1	0	3
Pre-requisites/Exposure	Nil				
Co-requisites					

Catalog Description

This course will help the students to learn Post-mortem examinations; external examination; internal examination; collection, preservation and packaging of viscera and nature and causes of injuries.

Course Objectives: The student will understand

1. About the scope of different types of injuries, causes and manner of death and their medico legal significance
2. About the utility of the injury assessment in medico legal cases.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Describe various physiological and chemical changes after death and will be able to estimate time since death.
- CO2. Identify the type of wound and its causes, also they can estimate the age of injury.
- CO3. Identify type of dentition and can estimate the age, sex and race of individual by analyzing the given teeth.
- CO4. Analyse the types of bite marks and their significance in identification of culprit and type of crime.
- CO5. Explain different types of injuries and their causes and medico-legal significance.

Course Contents:

Modules	Blooms level*	Number of hours
Module I: Autopsy Ante and Post-mortem examinations; external examination; internal examination; collection, preservation and packaging of viscera Assessing and determining the time and cause of death, Study of burned bones and bone fragments.	L1, L2	7
Module II: Introduction to wounds Introduction to wounds; definition, Mechanism of wound production & healing, Determining the age of the injury, and its medico - legal aspects.	L1, L2	7
Module III: Injuries due to Blunt and sharp forces Abrasions, Bruises, Lacerations ; causes, dimensions, ante – mortem & post – mortem injuries and its medico - legal aspects, Incised, Stab, Punctured wounds - causes, dimensions, ante – mortem& post – mortem injuries ante – mortem& post – mortem injuries.	L1, L2	8
Module IV: Miscellaneous injuries Injuries due to heat, cold, chemicals and radiation and their medicolegal significance.	L1, L2, L3	7
Module V: Bite Marks Types of bite marks; collection and preservation of DNA samples, forensic importance of bite marks; identification.	L1, L2	7

FCH2617	BALLISTICS	L	T	P	C
Version 1.1	Date of Approval: December, 2021	2	1	0	3
Pre-requisites/Exposure	Nil				
Co-requisites					

Catalog Description

The course is designed to provide basic and analytical knowledge of the firearms, types, firing range and the analysis of the GSR components.

Course Objective: - The objectives of the course:

1. To understand the role of ballistics in Forensic Science
2. Classification of firearms, determination of the range of firing, methods of laboratory examination of fired cartridges and firearms.
3. The students will also learn to reconstruct the sequence of events in cases involving firearms.

Course Outcomes: On completion of this course, the students will be able to

CO1. Explain the history and types of Firearms

CO2. Describe various types of ammunition

CO3. Explain about the Internal and External ballistics.

CO4. Restate the concept of linkage of bullets and Cartridge Cases.

CO5. Describe the Gun Shot Residue and determination of range of firing.

Course Contents:

Modules	Blooms level*	Number of hours
Module I: Ballistics Definition, Indian Arms Act, Forensic Importance; Nature of firearms, parts of a firearm, classification of firearm.	L1, L2	7
Module II: Ammunition Types, Bullet comparisons, cartridge case examination, class and individual characteristics of identification.	L1, L2, L3, L4	7
Module III: Range of Fire Muzzle pattern, scorching, blackening, tattooing, wad distribution, pellet patterns, GSR analysis, and primer residues.	L1, L2, L3, L4	7
Module IV: Analysis and Reconstruction Reconstruction of the sequence of events in a shooting case. Presentation of evidence in the court. accidental firing	L1, L2, L4	8
Module V: Firearm injuries Entrance wound, exit wound and internal wound, evaluation of firearm injuries.	L1, L3, L4	7

*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation

FCH2619	BALLISTICS LAB	L	T	P	C
Version 1.1	Date of Approval: December, 2021	0	0	2	1
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

The course is designed to provide basic and analytical knowledge of the firearms, types, firing range and the analysis of the GSR components.

Course Objective: - The students will understand & perform experiments relating to:

1. GSR analysis
2. Identifying parts of firearm, explosives

Course Outcomes: On completion of this course, the students will be able to

CO1. Perform spot tests for GSR (Gun Shot Residue)

CO2. Identify types of firearms

CO3. Perform filter tests for petroleum products in cases of arson.

CO4. Perform TLC for flammable liquids like kerosene and diesel.

Course Contents: Lab/Practical	Blooms level	Number of hours
1. Spot test for GSR (Nitrate test, sulphate and chlorate test) 2. Identification of parts of firearm (Shotgun, rifle and pistol) 3. Filter test for petroleum products 4. TLC for flammable liquids (Kerosene and diesel).	L1, L3, L4	12

FCH2610	FORENSIC PSYCHOLOGY	L	T	P	C
Version 1.1	Date of Approval: December, 2021	2	1	0	3
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

This course is intended to give insight of providing the basic knowledge about the human behavior, and its impact on social environment. The students will be able to explain cognitive neuroscience and associated disorders. The course will help the students to understand the concept of intelligence and forensic psychological impact.

Course Objectives:

1. To facilitate the learning of traditional and emergent fields of cognitive neuropsychology.
2. To understand-brain-behaviour relationship in day-to-day life
3. To explore the practical implications of cognitive processes in human performance.

Course Outcomes

On completion of this course, the students will be able to

CO1. Explain the concepts of emergent fields of cognitive neuropsychology.

CO2. Describe brain-behaviour relationship in day-to-day life

CO3. Apply practical implications of cognitive processes in human performance.

CO4. Analyse impact of intelligence and decision making and language on personal behaviour

Course Contents:

Modules	Blooms level	Number of hours
Module I: The Science of Psychology Concepts of psychology - Definition of psychology, goals of psychology Different perspectives in Psychology - Modern perspectives, Humanistic, behaviouristic, cognitive, psychodynamic.	L1, L2	8
Module II: – Consciousness Consciousness - Definition of consciousness, states of consciousness Altered state of consciousness - Dreams, awake states including daydreaming Rhythms of consciousness (Circadian rhythms) Sleep – stages of sleep, Dreams – Content, REM sleep and non-REM sleep	L1, L2, L3	7
Module III: Theories of Personality & Perception Understanding personality: Definition- mainly all port's definition, stressing uniqueness, enduring characteristics, temperament. Approaches – Psychodynamic (Freud, Jung & Adler), Humanistic (Rogers & Maslow) Dispositional approaches – Type (Jung. Type A& B, Rotter and Big – 5 and Trait (Catelli) Behavioral Approaches - Locus of control and Social learning theory. Assessment of personality – Questionnaires, Rating Scales and Projective tests, biological model assessment of personality Basic concepts in perception, Gestalt Principles, assessment attention and perception .	L1, L2, L3, L4	9
Module IV: Psychological disorders	L1, L2, L3	8

FCH2612	TECHNICAL WRITING IN SCIENCE-II & Workshop	L	T	P	C
Version 1.1	Date of Approval: December, 2021	1	1	0	2
Pre-requisites/Exposure	Nil				
Co-requisites					

Catalog Description

The students will learn to write and analyze the technical. They will also be able to write scientific research article and projects.

Course Objective:

Students will be introduced to learning the written and oral communication of technical information. Assignments include writing and presenting proposals, reports, and documentation. Emphasis on use of rhetorical analysis, computer applications, collaborative writing, and usability testing to complete technical communication tasks in the workplace.

Course Outcomes

Students will learn about

- CO1. Technical report writing
- CO2. Journal paper writing process
- CO3. Project Management in Technical Communication
- CO4. Project writing & project proposal writing

Course Contents:

Modules	Blooms level*	Number of hours
Module I: Technical Writing Process Document development process, Estimating Technical Documentation, Documentation Planning, Selection of Tools, Information Architecture, Templates and Page design, Audience Profiling.	L1, L2 and L3	10
Module II: Journal paper writing: Abstract for paper and poster, different kind of journal for chemistry, impact factors of journals, ISBN number, Citation, H-index.	L1, L2, L3	07
Module III: Analytical report, Project Management in Technical Communication, Project writing, project proposal writing.	L1, L2, L3	07

FCH2631	TERM PAPER	L	T	P	C
Version 1.1	Date of Approval: December, 2021	0	2	0	2
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

This course will help the students to further enhance their knowledge in a particular area of their choice. This will offer a deep understanding in that particular field and prepare students to take over challenges in following semester.

Course Objective: The objective of this course is to:

1. Judge the understanding as well as application of the knowledge gained by the students.
2. The aim of the term paper is to provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking a significant practical unit of examining and analyzing various aspects of chemistry and its application at a level commensurate with the learning outcomes of the various courses taken up them in the ongoing semester.

A term paper is primarily a record of intelligent reading in several sources on a particular subject. The students will choose the topic at the beginning of the session in consultation with the faculty assigned. At least one middle level or senior level person of a company from the chosen sector may be interviewed face to face.

Course Outcomes

On completion of this course,

- CO1. The students will be able to get an opportunity to further enhance their knowledge in a sector of their choice.
- CO2. The students will undertake a significant practical unit of examining and analyzing various aspects of chemistry and its application at a level commensurate with the learning outcomes of the various courses taken up them in the ongoing semester.

Course Contents:

Modules	Blooms level*	Number of hours
<ol style="list-style-type: none"> 1. The term paper will be related to the contemporary issue and the topic will be given by the department. 2. The presentation of the term paper is scheduled to be held before the commencement of Semester examinations. 3. The paper will carry 100 marks that will be marked on the basis of understanding and organization of content based on the literature review. The Bibliography shall form an important part of the paper. 4. Examples of a few broad areas for Term Paper (List is indicative, not exhaustive) <ol style="list-style-type: none"> 1. Forensic Toxicology 2. Forensic Biochemistry 3. Forensic Anthropology 4. Handwriting & Typewriting Analysis 5. Forensic Taphonomy 6. Crime Scene Investigation 7. Criminology, Criminal Law & Police Administration 8. Fingerprint Science 9. Forensic Serology 10. DNA Fingerprinting 	L1, L2 and L3	24

FCH2632	MINOR PROJECT	L	T	P	C
Version 1.1	Date of Approval: December, 2021	0	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites					

Catalog Description

Project will help the students to shape their intellectual and personal skills in the chosen field. This will also help them to develop their understanding for critical analysis of data and techniques and addressing the issues of related problems.

Course Objectives

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Carry out a substantial research-based project
- CO2. Demonstrate capacity to improve student achievement, engagement and retention
- CO3. Demonstrate capacity to lead and manage change through collaboration with others
- CO4. Demonstrate an understanding of the ethical issues associated with practitioner research
- CO5. Analyse data and synthesize research findings
- CO6. Report research findings in written and verbal forms

Course Contents:

Annexure-IB**Student's Declaration**

Ihereby declare that the Project Work with the title (in block letters)..... submitted by me for the partial fulfilment of the degree of B.Sc. Honours in Forensic science is my original work and has not been submitted earlier to any other University /Institution for the fulfilment of the requirement for any course of study.

I also declare that no chapter of this manuscript in whole or in part has been incorporated in this report from any earlier work done by others or by me. However, extracts of any literature which has been used for this report has been duly acknowledged providing details of such literature in the references.

COMPUTER FUNDAMENTALS

Course Code: MTH2214

Credit Units: 02

Course Objective:

This course is aimed to provide a fundamental understanding of computer science for the students in their early stages of academic career. The syllabus includes the basic concepts of memory, processing units, input and output devices, primary arithmetic and number conversions. At the end of the program the students will be able to understand the fundamentals of WORD, Power Point and Excel.

Course Contents:

Module I

Introduction to computer, history, Characteristics of computers, Basic Computer Organization, Computer Hardware Components Input, Output, Storage units, Central Processing Unit and memory, Input Devices (Keyboard, Mouse, Joystick), Output devices (Monitors, Printers, Multimedia projectors). Number System-Binary, Hexadecimal, Octal, and Decimal. Conversion from one number system to another.

Module II

Introduction to WORD Processor: Typing text, Closing and saving the text, Text editing, Spell Check, Common formatting functions-Working with Alignment, Working with Indentation, Working with Highlight, Working with Font. FIND & REPLACE, formatting the paragraph, special symbols, Bullets & Numbering, Tables, INSERTING CLIPART & WORDART, Picture & Drawing Tool Bar, HEADER & FOOTER

Module III

Introduction-Opening new presentation, Parts of PowerPoint window, Opening saving and closing presentations, Features of PowerPoint, Background design, Word art, Clip art, Drawings, 3D settings. Inserting and deleting slides, arranging slides, slides show, Animations, Sound, Views, types of views. Creating custom presentations

Module IV

Introduction to Excel: parts of EXCEL window, opening closing of workbooks, editing data, Copying the Data, Moving the Data, Formatting the Data, Formatting Tool bar, Drawing in Excel, Drawing Tool bar, Formatting and editing the Worksheet., Format cells window, Inserting Row and Column, Deleting Row and Column, Inserting Worksheet, Deleting Worksheet, Renaming Worksheet, Formulas in Excel, Creating simple formulas, Functions, Date Arithmetic, Working with Charts, Types of Charts, Inserting Charts, Formatting the Charts.

List of Practical:

- 1) Type a Leave Letter in Word Using format/style/ modify format/text, set text to reasonably large such as 18-pt.
- 2) Set up one table, with shading and a minimum of 3 rows and 3 columns. List your at least 10 favorite holiday destinations in the table.
- 3) Create a Small advertisement by inserting some pictures
- 4) Create a document with header and footer. Insert your institute name as header.
- 5) Create a document having two columns with page number.
- 6) Create a Power point presentation of your college (Minimum 10 Slides)
- 7) Insert college pictures in the slides (Minimum 5 slides)
- 8) Apply different transitions to all slides
- 9) Create a Power point presentation with animation and audio sounds
- 10) A demo presentation either on WORD or Power Point
- 11) Formatting the Date cell
- 12) Create an Excel sheet for students mark sheet of 5 subjects. Calculate the average, total, pass/fail using functions and formulas
- 13) Create a bar chart in Excel for year wise students enroll in your course.

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

INTRODUCTION TO C PROGRAMMING

Course Code: MTH2318

Credit Units – 02

Course Objective:

The objective of this course is to acquaint the students with the basics of computers system, its components, data representation inside computer and to get them familiar with various important features of C programming.

Course Contents:

Module-I: Computers fundamentals:- definition, block diagram, diagram with components and characteristics, classification of computers History of C: Introduction of C, Basic structure of C program, Concept of problem solving, program design, debugging, Types of errors in programming, Number systems, Binary, octal, hexadecimal and their inter conversions.

Module-II: Element used in C, Header file, key words, identifiers, concept of variables, constants and data types in C, Input/output function, arithmetic, relational and bitwise operator, increment and decrement operator, unary operator, type casting, operator hierarchy, Conditional operator

Module-III: Decision making with if statement, else statement, if-else statement, nesting if, switch and break, go to statement. Decision making statement concepts of loops like while loop, do while loop, for loop, nested for loops, jumps in loop.

Module-IV: Functions: - use of inbuilt function, user defined functions, arrays:- one dimensional and n dimensional array, initialization of array, iterative programs using arrays, uses of array with combination of decision making operator, Function prototype, Return values and their types, function argument, recursion, Strings, array of strings.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE

INTRODUCTION TO C PROGRAMMING LAB

Course Code: MTH2319

Credit Units: 02

Software Required: Turbo C

Course Contents:

- 1 Basic programming to understand the working of C
- 2 Programs using if, else if statements
- 3 Programs using nested if-else statements
- 4 Programs using switch case
- 5 Programs using loops like while and do while
- 6 Pattern programs using loops and multiple loops
- 7 Simple programs with the help of function
- 8 Simple programs involving array and strings

MECHANICS

Course Code: MTH2503

Credit Units: 04

Course Objective:

Mechanics is the study of forces that act on bodies and the resultant motion that those bodies experience. The course is devoted to introduce physical principles and techniques to solve mechanics problems through the integrated application of mathematical, scientific tools.

Course Contents:

Module-I: Basic Concept of Mechanics: Fundamental laws of Newtonian mechanics, Motion of particle, Components of velocity and acceleration (cartesian, radial and transverse, tangential and normal). Projectile motion, Conservative and non conservative forces, Work and Energy, Conservative field and potential energy, Principle of conservation of linear momentum, Angular momentum and energy for a particle. D' Alembert's principle.

Module-II: Moments, Moment of a force about a point and a line, Parallel forces, Couple, theorem of Varignon, Necessary conditions for equilibrium (moment), Coplanar forces, Reduction of a general plane force system, Parallel force system in two and three dimensions, Forces acting at a point, Triangle law of forces and Polygon law of forces, Lami's theorem.

Module-III: Motion under the inverse square law, Newton's law of gravitation and planetary orbits. Kepler's laws of motion deduced from Newton's laws of gravitation and vice-versa. Motion of the mass centre and motion relative to mass centre. Classification of orbits, Motion of artificial satellites, Orbits and their eccentricity.

Module IV: Simple Harmonic motion, Differential equation of S.H.M. Phase relationship between velocity, displacement, acceleration & energy. Derivation of differential equation of motion for SHM starting from Hooke's law; Damped oscillations. Derivation of decaying amplitude: over damping, Critical damping and under damping, Forced and coupled oscillations.

Examination Scheme:

OPERATIONS RESEARCH

Course Code: MTH2504

Credit Units: 04

Course Objective:

Operations research has many applications in science, engineering, economics, and industry. The goal of the course is to teach how to formulate, analyze, and solve mathematical models using appropriate optimization tools.

Course Contents:

Module-I: Basic Definition, Nature and Significance of OR, feature of OR Approach Application and Scope of OR, Linear Programming problems, mathematical formulation of LPP, case studies, Advantages and Limitations of Linear Programming, Application Areas of Linear Programming, definition of feasible, Infeasible Solution, Basic feasible solution. Solution of LPP by Graphical methods, unbounded, alternative and no feasible solution, convex set, convex hull, examples on convex sets, fundamental theorem of LPP.

Module-II: Standard form of LPP, slack & surplus variable, Simplex methods, Big M Method, Two phase method, solved problems on unbounded, alternative and no feasible solution, degeneracy. Duality in Linear Programming Problem, importance of duality, formulation of dual problems, theorems on Duality, Sensitivity Analysis.

Module-III: Assignment Problems, Hungarian method for optimal solution, solving unbalance problems, travelling salesman problems. Transportation Problem, formulation, finding basic feasible solution by- Northwest Corner Method, Least Cost Method and by Vogels Approximation Method, Optimality test: MODI method, Unbalanced Supply and Demand, Degeneracy Problem, Alternative Optional Solution, Maximization Transportation Problem.

Module-IV Sequencing problem, solution of sequencing problems, processing n jobs through 2 machines, processing n-jobs through 3 machines, processing 2-jobs through m-machine, Game theory: Competitive game, rectangular game, saddle points, minimax (maximin) method of optimal solution, value of game, Solution of game with saddle point. Rectangular games without saddle point, mixed strategy for 2 x 2 games.

SCIENTIFIC COMPUTING

Course Code: MTH2520

Credit Units: 2

Course Objective:

MATLAB is a scientific computing tool which covers almost all area of science and engineering. Students will be using MATLAB environment to solve various types of mathematical problems.

Course Contents:

Fundamentals of Linear Algebra, Numerical Analysis, Differential Equations and their application using MATLAB

1. Generating arrays and matrices and their manipulations
2. Introduction on few builtin functions
3. 2D and 3D plots, multiple plots using figure and subplot commands
4. Annotation of plots
5. Simple script files and editing them
6. Introduction of function files
7. Introducing notion of sub-functions and nested functions
8. Solving IVPs using ode45 and other solvers
9. Solving system of linear equations using builtin functions

SUMMER WORKSHOP

Course Code: MTH2535

Credit Units: 06

Workshop will be conducted for Two-week (six hours per day). The course will be intended to provide appropriate exposure aimed at developing key skills for enhancing employability and preparedness for higher education. The focus will be on the following:

- Technical softwares/ tools related to scientific computing and statistics. (first week).
- Report writing, Presentation etc. (first week).
- Reinforce fundamental concepts of core subjects like algebra/analysis/differential equations through intensive sessions. (second week)

Evaluation scheme:

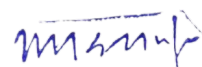

1. The students will have to appear for class-test(s) during the workshop.
2. During summer break, students have to work on the assignment(s) given to them.
3. The assignment(s) will have to be submitted within two weeks of commencement of new semester followed by viva-voce.
4. The evaluation will be done by the committee comprising of faculty members who served as resource persons in the workshop.

Components	Attendance	Assignment(s)	Class test(s)	Viva-voce
Weightage (%)	5	35	30	30

*Evaluation scheme for SAP will be provided by office of International Affairs of the University.

FUZZY SETS & FUZZY LOGIC

Course Code: MTH2518

Credit Units: 03

Course Objective:

The course covers the study of fuzzy description logics as formalism for representing and reasoning with-vague or imprecise knowledge. We will study several variants of fuzzy DLs that differentiate from each other by their expressivity and their fuzzy semantics.

Course Contents:

Module I: Background of Fuzzy sets, Crisp sets - operations on crisp sets to functions, Fuzzy sets, fuzzy set operations, Properties of fuzzy sets, Expansion of Fuzzy set; Interval value Fuzzy set, Type-2 Fuzzy set, L-Fuzzy set, Level-2 Fuzzy set. Membership functions, Features of the membership function.

Module II: Alpha cut set, additional properties of alpha cut, Support, Core and height of alpha cut set, Cardinality of fuzzy set, First and second decomposition theorem, Functions of fuzzy sets-extension principle, Cartesian product, Extension principle on Cartesian product.

Module III: Crisp relations-cardinality of crisp relations, Operations on crisp relations, Properties of crisp relations, Compositions, Fuzzy relations-cardinality of fuzzy relations, Operations on fuzzy relations, Properties of fuzzy relations, max-min composition, fuzzy equivalence relations, transitive max-min closure, Projections and Cylindrical Extensions, Fuzzy Relation Equations.

Module IV: Classical Logic and fuzzy logic: Classical predicate logic-tautologies, Contradictions, Equivalence, Exclusive or an exclusive nor, Logical proofs, Deductive Inferences, Fuzzy logic, Fuzzy proposition and its types, Fuzzy quantifiers, Equivalence and logical proofs, Modifiers, inference from conditional and qualified fuzzy proposition.

Examination Scheme:

R PROGRAMMING AND SAS

Course Code: MTH2519

Credit Units: 04

Course Objective:

To introduce programming concepts of R-programming, and how to use R for effective data analysis. Students will also get an exposure to SAS, a software commonly used by statisticians.

Course Contents:

Module I: Overview of R, R data types and objects, reading and writing data, accessing R packages, writing R functions, debugging, profiling R code, and commenting R code.

Module II: Control structures, functions, scoping rules, dates and times, Loop functions, organizing R code.

Module III: SAS: Introduction to SAS System & Architecture, import and export raw data files, manipulate and transform data, combine SAS data sets, create basic detail and summary reports using SAS procedures identify and correct data.

Module IV: Leave and Continue Statements, Where Statement, If “ Then Else statement; Goto, Stop and Error statements; Output statement, Put statement; Do Loops; modifying and combining data sets; updating master data set; display manager commands; SAS functions; an introduction to arrays and array processing; overview of methods for combining SAS data sets.

DIGITAL ELECTRONICS

Course Code: MTH2521

Credit Units: 03

Course Objective:

This course is an introduction to the basic principles of digital electronics. At the conclusion of this course, the student will be able to quantitatively identify the fundamentals of Digital signals and circuits, including number systems, logic gates, logic and arithmetic subsystems, and integrated circuits. The student will construct, analyze combinational logic circuits & sequential circuits; create a truth table for standard digital logic gates. Student will also be able to understand about digital to analog conversion with logic gates, adders- sub tractors etc. The student will be able to analyze and design simple logic circuits using tools such as Karnaugh Mapping minimization, and will be able to draw logic diagrams.

Course Contents:

Module I: Number System and Logic gates

Representation of Numbers: Decimal, Binary, Octal, Hexadecimal Number Systems and Conversion of the bases. Logical Operators: NOT, AND, OR, NAND, NOR, EX-OR, EX- NOR, Truth tables of Logical Operations, Duality Principle, De Morgan's theorems Simplification of logical Function using laws.

Module II: Circuits and Expressions

Standard forms for Logical Expressions - Sum of Products, Product of Sums, Standard SOPs, Standard POSs, Conversion SOPs to POSs, and POSs to SOPs. Combinational Circuits: Series Combination, Parallel Combination, Logical Circuits, Applications: Combinational Circuits, and Switching Circuits.

Module III: Digital Circuits

Analog & Digital Signals, Logical Functions: Min-terms and Max-terms, Algebraic Methods and Laws, Karnaugh Maps. Simplification of Arithmetic Circuits Expressions; Half- Adders and Full - Adders, Half –Subtractor and Full- Subtractor.

SPECIAL FUNCTIONS AND INTEGRAL TRANSFORMS

Course Code: MTH2615

Credit Units: 4

Course Objective:

The main objective of this course is to familiarize students with a range of mathematical methods which includes series solution and transforms to solve various types of ordinary differential equations.

Course Contents:

Module I: Series solution of differential equations – Power series method, Definitions of Beta and Gamma functions. Bessel equation and its solution: Bessel functions and their properties- Convergence, recurrence, Relations and generating functions, Orthogonality of Bessel functions.

Module II: Legendre and Hermite differentials equations and their solutions: Legendre and Hermite functions and their properties-Recurrence Relations and generating functions. Orthogonality of Legendre and Hermite polynomials. Rodrigues' Formula for Legendre & Hermite Polynomials, Laplace Integral Representation of Legendre polynomial.

Module III: Laplace Transforms – Existence theorem for Laplace transforms, Linearity of the Laplace transforms, Shifting theorems, Laplace transforms of derivatives and integrals, Differentiation and integration of Laplace transforms, Convolution theorem, Inverse Laplace transforms, convolution theorem, Inverse Laplace transforms of derivatives and integrals, solution of ordinary differential equations using Laplace transform.

Module IV: Fourier transforms: Linearity property, Shifting, Modulation, Convolution Theorem, Fourier Transform of Derivatives, Relations between Fourier transform and Laplace transform, Parseval's identity for Fourier transforms, solution of differential Equations using Fourier Transforms.

MECHANICS

Course Code: PHY2101

Credit Units: 03

Course Objective:

This course has been so framed that the students are exposed to the topics of conservation laws, dynamics of rigid bodies and inverse-square law of forces in the framework of Newtonian Mechanics. Special theory of relativity is also included here.

Course Contents:

Module I: Conservation Laws

Lectures: 11

Coordinate systems and motion of a particle: Volume, velocity and acceleration in Cartesian and Spherical co-ordinate systems, Solid angle. Space Time Symmetry and Conservation Laws: Relationship of conservation laws and symmetries of space and time.

Module II: Elastic and Inelastic Scattering

Lectures: 11

Types of scattering and conservation laws, Laboratory and centre of mass systems, collision of particles which stick together, General elastic collision of particles of different masses.

Module III: Inverse-Square-Law of Forces

Lectures: 11

Newton's Law of Gravitation, Various forces in nature (qualitative). Central and non-central forces, Inverse square force, Centre of mass. Two-body problem – reduced mass, angular momentum in central force field. Equation of motion under a force law, Orbits and their eccentricity, Kepler's laws., Basic idea of global positioning system (GPS)

Module IV: Galilean transformations and Einstein's special theory of relativity Lectures: 12

Frames of reference, Inertial and non-inertial frames, Galilean transformation and Galilean relativity Basic postulates of special relativity, Lorentz transformations, Simultaneity and causality in relativity. Length contraction, Time dilation, Twin paradox, Velocity Transformation. Relativistic momentum, Relativistic Energy, Transformation of Momentum and Energy, Equivalence of Mass and Energy.

WAVES & OSCILLATIONS

Course Code: PHY2102

Credit Units: 03

Course Objective:

This course aims at exposing the students to Harmonics Oscillations and applications in our everyday life.

Course Contents:

Module I: Simple Harmonic Free Vibrations

Simple harmonic motion, energy of a SHO, Compound pendulum, Electrical Oscillations, Plasma Vibrations, Lattice Vibrations, Transverse Vibrations of a mass on a string, composition of two perpendicular SHMs of same period and of periods in ratio 1:2, Anharmonic Oscillations.

Module II: Damped Simple Harmonic Vibrations

Decay of free Vibrations due to damping, types of damping, Determination of damping coefficients – Logarithmic decrement, relaxation time and Q-factor. Electromagnetic damping, collision damping – Ionosphere and metals.

Module III: Forced Vibrations and Resonance

A forced oscillator, Transient and Steady State Oscillations, velocity versus driving force frequency, Resonance, power supplied to forced oscillator by the driving force. Q-factor of a forced oscillator, Electrical, nuclear and nuclear-magnetic resonances.

Module IV: Coupled Oscillations

Stiffness coupled oscillators, Normal coordinates and modes of vibrations. Normal frequencies, Forced vibrations and resonance for coupled oscillators, Masses on string-coupled oscillators.

Module V: Waves in Physical Media

Wave motion in one dimension, Transverse and longitudinal waves, progressive harmonic waves and their energy, Transverse waves on a string, longitudinal waves on a rod, Electrical transmission lines, characteristic impedance of a string and a transmission line, waves in an absorbing medium, spherical waves.

Examination Scheme:

APPLIED CHEMISTRY LAB-I

Course Code: PHY2107

Credit Units:01

Course Contents:

[I] Titrimetric Analysis

- (i) Calibration and use of apparatus
- (ii) Preparation of solutions of different Molarity/Normality of titrant

[II] Acid- Base Titrations

- (i) Estimation of carbonate and hydroxide present together in mixture.
- (ii) Estimation of carbonate and bicarbonate present together in mixture.
- (iii) Estimation of free alkali present in different soaps/detergents

[III] Oxidation- Reduction Titrimetry

- (i) Estimation of Fe(II) and oxalic acid using standardized KMnO_4 solution.
- (ii) Estimation of oxalic acid and sodium oxalate in a given mixture.
- (iii) Estimation of Fe (II) with $\text{K}_2\text{Cr}_2\text{O}_7$ using internal (diphenylamine, anthranilic acid) and external indicator.

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

PHYSICS LAB-I

Course Code: PHY2104

Credit Units:02

Course Contents:

- To determine the Moment of Inertia of a Flywheel.
- To determine the Modulus of Rigidity of a Wire by Maxwell's needle.
- To determine the Coefficient of Viscosity of water by Capillary Flow Method (Poiseuille's method).
- Determination of moment of inertia of metallic cylinder / rectangular bar about an axis passing through its C.G. and to determine the rigidity modulus of the material of the suspension wire.
- To determine the wavelength of a monochromatic light by Newton's ring method.
- Measurement of the slit width and the separation between the slits of a double slit by observing the diffraction and interference fringes.
- To calibrate a polarimeter and hence to determine the concentration of sugar solution.
- To determine the refractive index of material of Prism using Spectrometer.
- To determine the wavelength of spectral lines of Mercury lamp using diffraction grating.

OPTICS

Course Code: PHY2202

Credit Units:03

Course Objective: This course aims at exposing the students to basic laws of optics and its applications in real world.

Course Contents:

Module I: Geometric Optics and its applications:

Ray optics, Plane and spherical Mirrors, Lens, image formation, Lens formula. Microscope and Telescope.

Module II: Interference

Young's experiment, coherent sources, phase and path differences, Theory of interference fringes, Fresnel's biprism, sheet thickness determination, interference in thin films due to reflected and transmitted lights, Maxima and minima in intensities, Colours of thin films, Newton's rings and its various aspects, Non-reflecting films.

Module III: Diffraction

Introduction, rectilinear propagation, Fresnel and Fraunhofer diffraction, Diffraction at circular aperture and straight edge and their discussion. Fraunhofer diffraction at a single slit and a double slit. Fraunhofer diffraction at N slits and its discussion. Plane diffraction grating and its theory, Dispersive power of grating, Resolving power of optical instruments, Rayleigh criterion, Resolving power telescope, microscope, prism and diffraction grating. Phase contrast microscope.

Module IV: Polarization:

Introduction, Polarization by reflection, Brewster's law, Polarization by refraction, Malus's law, Double refraction, Nicol Prism and its use, elliptically and Circularly polarized light, quarter and half-wave plates, production and detection of plane, circularly and elliptically polarized light, optical activity, specific rotation, Half-shade polarimeter.

Examination Scheme:

APPLIED CHEMISTRY LAB-II

Course Code: PHY2207

Credit Units:01

Course Contents:

1. Checking the calibration of the thermometer.
2. Purification of organic compounds by crystallization using the following solvents: Water, Alcohol, Alcohol-Water & Charcoal
3. Purification by Distillation, Decolouration and Sublimation.
4. Determination of the melting points of above compounds and unknown organic compounds (Kjeldahl method and electrically heated melting point apparatus)
5. Effect of impurities on the melting point – mixed melting point of two unknown organic compounds.
6. Chromatography
 - a. Separation of a mixture of two amino acids by ascending and horizontal paper chromatography.
 - b. Separation of a mixture of two sugars by ascending paper chromatography.
 - c. Separation of a mixture of o- and p-nitrophenol or o- and p-aminophenol by thin layer chromatography (TLC)

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

PHYSICS LAB-II

Course Code: PHY2204

Credit Units:02

Course Contents:

1. To determine the Coefficient of Thermal Conductivity of Copper by Searle's apparatus.
2. To determine the Coefficient of Thermal Conductivity of Copper by Angstrom's Method.
3. To determine the Coefficient of Thermal Conductivity of a bad conductor by Lee and Charlton's disc method.
4. To investigate the Motion of Coupled Oscillators.
5. To determine the Frequency of an Electrically Maintained Tuning Fork by Melde's Experiment.
6. To verify $\lambda^2 - T$ Law by Melde's Experiment.
7. To study the variation of Thermo-Emf of a Thermocouple with Difference of temperature of its Two Junctions.
8. To determine the value of acceleration (g) due to gravity.
9. To determine the frequency of tuning fork using sonometer.

Any other experiment carried out in the class.

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

ELECTRICITY & MAGNETISM

Course Code: PHY2301

Credit Units:03

Course Objective:

The aim of this course is to teach the students basics of electronics and electric current after making them comfortable with the mathematical tools involved in the study of electricity and magnetism.

Course Contents:

Module-I: Electric Charges, Fields and Potential

Basics of vector calculus (Gradient, divergence, curl and their physical significance; Gauss and Stokes theorem); Electric Charge, Quantization and Conservation of Electric Charge, Coulomb's Law, Electric Field, Principle of Superposition, Electric Flux, Gauss's law, Electric Field for Spherical, Plane and Cylindrical Distribution of Charges (applications of Gauss law), Differential form of Gauss's Law; Electric Potential; Line Integral of the Electric Field, Potential Difference and Potential Function, Electric Field from the Potential, Electric Field and Potential of Dipole; Potential for Charge Distributions: Equipotential Surfaces, Potential due to Charged Wire and Charged Disc, Energy Associated with Electric Field; Conservative Nature of Electric Force.

Module-II: Electric Fields in Materials:

Review of capacitors, Dielectric Material in an Electric Field, Polarisation, Gauss's Law in Dielectric Medium, Displacement Vector, Boundary Conditions on **D** and **E**; Dielectric Material between Capacitor Plates, Energy stored in a capacitor having dielectric medium.

Module-III: Electric current and its magnetic effects:

Electric Currents: Charge Transport and Current Density, Equation of Continuity, Ohm's Law in vector form.

Magnetic Field: Definition, Divergence of Magnetic Field, Ampere's Law and its Applications to Straight Wire, Solenoid and Toroid; Force on a Charged Particle Moving in Electric and Magnetic Fields, Current Loop and Magnetic Dipoles, Magnetic Dipole Moment.

Module-IV: Electromagnetic induction:

Electromagnetic Induction: Faraday's Laws of Electromagnetic Induction, Lenz's Law, Motional E.M.F., Self and Mutual Inductance, Self Inductance for Solenoid, Mutual Inductance of Coupled Solenoids, Energy Stored in the Magnetic Field; Transformer as an application of EMI.

Examination Scheme:

CLASSICAL MECHANICS

Course Code: PHY2309

Credit Units: 03

Course Objective:

This course aims at exposing the students to let them understand the basics of Classical and Quantum Mechanics

Course Contents:

Module I: Lagrangian formulation of classical mechanics

Mechanics of a system of particles; constraints & degrees of freedom, Generalised coordinates, momentum, force & energy. D' Alembert's principle; variational technique; Hamilton's variational principle; Lagrange's equation for conservative systems and its application to simple cases: simple and spherical pendulum, one dimensional and isotropic oscillator etc.

Module II: Hamiltonian formulation of classical mechanics and old quantum theory

Hamilton's canonical equations of motion; Idea of cyclic coordinates, its relation with conservation principles, applications of Hamiltonian formulation to simple cases, Variational principle and least action; contact transformations; poisson bracket; Hamilton Jacoby theory.

Module III: Mechanics problems using Lagrangian formulation

Central force problem: Two body problem; reduced mass; motion under central force; constants of motion; Virial theorem; Kepler's laws of planetary motion.

Rigid body dynamics: moment of inertia, Angular momentum and kinetic energy of motion about a point; introduction about tensors

Module IV: Limitations of Classical Mechanics

Blackbody radiation, the photoelectric effect, the Franck-Hertz experiment, Compton effect, De Broglie hypothesis, Wave particle duality, Group and Particle velocity, Wave packets, Experiments supporting wave particle duality.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

ANALOG ELECTRONICS

Course Code: PHY2303

Credit Units:03

Course Objective:

This course aims at exposing the students to Semiconductors, Circuits and Transistors and its applications.

Course Contents:

Module I: Junction Diodes and their Applications

Formation of PN junction, Depletion region, Junction capacitance (Transition and diffusion capacitance), Energy level diagrams and built in potential, diffusion and drift velocity of carriers, Diode equation, V-I characteristics, temperature dependence, Applications Half-wave Rectifiers & Full-wave Rectifiers, Calculation of Ripple Factor and Rectification Efficiency. Low pass filter and High pass filter, Qualitative idea of C, L and π - Filters. Zener Diode and Voltage Regulation. Photo Diode, Tunnel Diode, LED, Varactor Diode, Tunnel diodes AC and DC Power Supplies

Module II: Circuit Analysis

Kirchhoff's Laws (KCL and KVL), Mesh and Node analysis of dc and ac Circuits, Superposition theorem, Thevenin's and Norton's theorem, reciprocity theorem, Linear resistive 2- ports and interconnections, Z, Y, L, S, T, H' and H'' representations/Parameters, Wheatstone Bridge and its Applications to Wein Bridge and Anderson Bridge

Module III: Transistors

PNP and NPN junction transistors, transistor current components, CB, CC and CE Configurations, transfer characteristics, Transistor as switch and applications, Transistor biasing, fixed bias, emitter-stabilised biasing, Voltage-divider biasing, FET and BJT Junction Field Effect Transistor (JFET), JFET V-I Characteristics, Application of FET as voltage variable resistor. Advantages of FET over BJT. MOSFET: construction, working & Application

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

PHYSICS LAB-III

Course Code: PHY2304

Credit Units:02

Course Contents:

1. To determine a Low Resistance by Carey Foster's Bridge.
2. To determine a Low Resistance by a Potentiometer.
3. To determine High Resistance by Leakage of a Capacitor.
4. To investigate the Motion of Coupled Oscillators.
4. To study the response curve of a Series LCR circuit and determine its (a) Resonant Frequency, (b) Impedance at Resonance and (c) Quality Factor Q, and (d) Band Width.
6. To study the response curve of a Parallel LCR circuit and determine its (a) Anti-Resonant Frequency and (b) Quality Factor Q.
8. To study (a) Half-wave Rectifier and (b) Full-wave Bridge Rectifier.
9. To study the Forward and Reverse characteristics of a Zener Diode and to study its use as a Voltage Regulator.
10. To study the CE Characteristics of a PNP Transistor.
11. To study the characteristics curves of PN junction diode in forward and reverse bias.
12. To study the Frequency Response of Voltage Gain of a RC-Coupled Amplifier.

Any other experiment carried out in the class.

COMPUTER PROGRAMMING IN C

Course Code: PHY2306

Credit Units: 03

Course Objective:

The objective of this course module is to acquaint the students with the basics of computers system, its components, data representation inside computer and to get them familiar with various important features of procedure oriented programming language i.e. C.

Course Contents:

Module I: Introduction

Introduction to computer, history, von-Neumann architecture, memory system (hierarchy, characteristics and types), H/W concepts (I/O Devices), S/W concepts (System S/W & Application S/W, utilities). Data Representation: Number systems, character representation codes, Binary, octal, hexadecimal and their interconversions. Binary arithmetic, floating point arithmetic, signed and unsigned numbers, Memory storage unit.

Module II: Programming in C

History of C, Introduction of C, Basic structure of C program, Concept of variables, constants and data types in C, Operators and expressions: Introduction, arithmetic, relational, Logical, Assignment, Increment and decrement operator, Conditional, bitwise operators, Expressions, Operator precedence and associativity. Managing Input and output Operation, formatting I/O.

Module III: Fundamental Features in C

C Statements, conditional executing using if, else, nesting of if, switch and break Concepts of loops, example of loops in C using for, while and do-while, continue and break. Storage types (automatic, register etc.), predefined processor, Command Line Argument.

Module IV: Arrays and Functions

One dimensional arrays and example of iterative programs using arrays, 2-D arrays Use in matrix computations .Concept of Sub-programming, functions Example of user defined functions. Function prototype, Return values and their types, calling function, function argument, function with variable number of argument, recursion.

Module V: Advanced features in C

Pointers, relationship between arrays and pointers Argument passing using pointers, Array of pointers. Passing arrays as arguments. Strings and C string library. Structure and Union. Defining C structures, Giving values to members, Array of structure, Nested structure, passing strings as arguments. File Handling.

Examination Scheme:

TERM PAPER & WORKSHOP

Course Code: PHY2331

Credit Units:03

This course will comprise of two components viz Term Paper Workshop.

Component I: Term Paper

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject.

The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

GUIDELINES FOR TERM PAPER

The procedure for writing a term paper may consists of the following steps:

- Choosing a subject
- Finding sources of materials
- Collecting the notes
- Outlining the paper
- Writing the first draft
- Editing & preparing the final paper

1. Choosing a Subject

The subject chosen should not be too general.

2. Finding Sources of materials

- d) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- e) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- f) The sources could be books and magazines articles, news stories, periodicals, scientific journals etc.

3. Collecting the notes

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- d) Get facts, not just opinions. Compare the facts with author's conclusion.
- e) In research studies, notice the methods and procedures, results & conclusions.
- f) Check cross references.

4. Outlining the paper

- c) Review notes to find main sub-divisions of the subject.
- d) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

5. Writing the first draft

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- a) statement of purpose
- b) main body of the paper
- c) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main ideas.

6. Editing & Preparing the final Paper

- j) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information/ details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.
- k) Read the paper to ensure that the language is not awkward, and that it "flows" properly.

- l) Check for proper spelling, phrasing and sentence construction.
- m) Check for proper form on footnotes, quotes, and punctuation.
- n) Check to see that quotations serve one of the following purposes:
- o) Show evidence of what an author has said.
- p) Avoid misrepresentation through restatement.
- q) Save unnecessary writing when ideas have been well expressed by the original author.
- r) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- Titlepage
- Table of contents
- Introduction
- Review
- Discussion & Conclusion
- References
- Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

Discussion

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

Conclusion

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- summary of questionposed
- summary offindings
- summary of main limitations of the study at hand
- details of possibilities for related future research

References

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

Appendix

The appendix should be used for data collected (e.g. questionnaires, transcripts) and for tables and graphs not included in the main text due to their subsidiary nature or to space constraints in the main text.

Component II: Workshop

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two ways. The trainer has to make sure that the aspect covered is practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

- Nanotechnology
- Renewable Energy
- Data Analytics
- Spintronics
- Superconductivity
- Bio-fuels
- Biophysics
- Quantum Computation
- Plasma Physics
- Cryogenics
- Clean Energy

Guidelines for Workshop

- The procedure for earning credits from workshop consists of the following steps:
- Relevant study material and references will be provided by the trainer in advance.
- The participants are expected to explore the topic in advance and take active part in the discussions held
- Attending and Participating in all activities of the workshop
- Group Activities have to be undertaken by students as guided by the trainer.
- Evaluation of workshop activities would be done through test and quiz at the end of the workshop.
- Submitting a write up of atleast 500 words about the learning outcome from the workshop.

QUANTUM MECHANICS

Course Code: PHY2410

Credit Units:03

Course Objective:

This course aims at exposing the students to Quantum Mechanics and its applications in Physics.

Course Contents:

Module I: Origin of Quantum Mechanics

Limitations of Classical Physics, Particle properties of waves: Black Body Radiation and Planck's Quantum hypothesis, Photoelectric effect, Compton Effect, Wave properties of particles: De-Broglie waves, physically acceptable wave functions, Probabilistic interpretation, Wave equation, phase and group velocity, Particle diffraction, Davisson and Germer experiment, Heisenberg uncertainty principle, Applications of uncertainty principle.

Module II: Schrodinger equation and general formalism of Quantum Mechanics

Schrodinger's time dependent equation, Linearity and superposition, Expectation values, Schrodinger's time independent equation, Stationary states, Hilbert space, normalization and orthonormality, Eigen functions and eigen values, quantum mechanical Operators, Hermitian Operators, Angular momentum operators and their commutation relations, eigenvalues and eigenfunctions of L^2 and L_z , Introduction to Bra and ket notation

Module III: Simple applications of Quantum Mechanics

Free particle, Particle in one dimensional and three dimensional box, Potential step. boundary conditions, bound and unbound states, Reflection and transmission coefficients for a rectangular barrier in one dimension, Tunnel effect, alpha decay, Linear harmonic oscillator (qualitative), The hydrogen atom problem (qualitative).

DIGITAL ELECTRONICS

Course Code: PHY2411

Credit Units: 03

Course Objective:

This course aims at exposing the students to Digital Electronics and Communication.

Course Contents:

Module I: Digital Circuits & Combinational Logic

Difference Between Analog and Digital Circuits. Binary Numbers. Octal and Hexadecimal Numbers, Conversion of Decimal to Binary and other numbers and Vice Versa, Logic systems, Circuits for OR, AND, NOT gates, transistor switching times, Exclusive OR gate, Verification and design of AND, OR NOT and XOR gates using NAND gates & NOR gates, Boolean algebra: De Morgan's Theorems. Simplification of Logic Circuit using Boolean Algebra. Conversion of a Truth Table into an Equivalent Logic Circuit by (1) Sum of Products Method and (2) Karnaugh Map. Arithmetic Circuits: Binary Addition. Binary Subtraction using 2's Complement Method, Half Adders, Full Adders and Subtractors

Module II:

Flip-Flops, Counters, Shift Registers and Converters:

TTL ICs (binary decoder, 7segment decoder, Schmitt trigger), 7-segment display driver.

Memories: RAM and ROM Sequential Circuits: RS, D, and JK Flip-Flops. Level Clocked and Edge Triggered Flip-Flops. Preset and Clear Operations. Race-around Conditions in JK Flip-Flops. Master-Slave JK Flip-Flop Shift registers: Serial and parallel shifting of data, A/D converter, D/A converter.

Module III: Analog Circuits

Integrated Circuits (Qualitative Treatment only) Active and Passive components. Advantages and Drawbacks of ICs. Scale of integration: SSI, MSI, LSI and VLSI (Basic Idea and Definitions Only). Examples of Linear and Digital ICs. Operational Amplifiers (Use Black Box approach): Revision of basic characteristics of Op-Amps. Characteristics of an Ideal Op-Amp. Feedback in Amplifiers. Open-loop and Closed-loop Gain. Frequency Response. CMRR. Virtual ground and its Application

Module IV: Communication

Modulation: Need for modulation- Types of modulation- Amplitude, Frequency, Phase and Pulse code modulation. Radio wave propagation, Ionosphere, Effect of Ionosphere on Radio waves, Skip distance and Maximum Usable Frequency, Radio transmitter and receiver, TV receiver, Satellite communication, Modem, Demodulation. Introduction to Microprocessor.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE

PHYSICS LAB-IV

Course Code: PHY2404

Credit Units:02

Course Contents:

1. To investigate the use of an op-amp as an Integrator.
2. To investigate the use of an op-amp as a Differentiator.
3. To study Amplitude Modulation using Transistor.
4. To study Pulse Width / Pulse Position and Pulse Amplitude Modulation using ICs.
5. To verify the basic logic gates using logic gate trainer kit.
6. To design and verify the following digital circuits using basic gates:
i) S-R flip-flops , ii) J-Kflip-flops.
7. To execute half adders and full adders with basic gates and hence to verify addition of binary numbers.
8. To determine the value of e/m by Thomson's method.

Any other experiment carried out in the class.

LASER PHYSICS

Course Code: PHY2406

Credit Units:03

Course Objective:

This course aims at students to give them basic understanding of Laser and its applications.

Course Contents:

Module I: Introduction

Introduction, mono chromaticity, temporal and spatial coherence, Einstein's coefficients, momentum transfer, possibility of light amplification, kinetics of optical absorption, shape and width of spectral lines, line broadening mechanism, natural, collision and Doppler broadening.

Module II: Laser Pumping and Resonators

Resonators, modes of a resonator, number of modes per unit volume, open resonators, confocal resonator (qualitative), quality factor, losses inside the cavity, threshold condition, Quantum yield.

Module III: Dynamics of the Laser Processes

Rate equations for two, three and four level systems, production of a giant pulse – Q switching, giant pulse dynamics, laser amplifiers, mode-locking, hole burning, distributed feedback lasers.

Module IV: Types of Lasers

He-Ne laser, Nitrogen Laser, CO₂ laser, Ruby laser, features of semiconductor lasers, intrinsic semiconductor lasers, doped semiconductors, condition for laser action, Advances in semiconductor lasers, injection lasers, dye lasers.

Module V: Applications

Holography, non-linear optics: harmonic generation, second harmonic generation, phase matching and optical mixing, brief qualitative description of some experiments of fundamental importance.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

Takahashi, S./DuFon, M.A. (1989), Cross-linguistic influence in indirectness: The case of English directives performed by native Japanese speakers. Unpublished paper, Department of English as a Second Language, University of Hawai'i at Manoa, Honolulu.

Unpublished Theses/ Dissertations

Möhl, S. (1996), All tagssituationen im interkulturellen Vergleich: Realisierung von Kritik und Ablehnung im Deutschen und Englischen. Unpublished MA thesis, University of Hamburg.
Walsh, R. (1995), Language development and the year abroad: A study of oral grammatical accuracy amongst adult learners of German as a foreign language. Unpublished PhD dissertation, University College Dublin.

Appendix

The appendix should be used for data collected (e.g. questionnaires, transcripts) and for tables and graphs not included in the main text due to their subsidiary nature or to space constraints in the main text.

Component II: Workshop

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two ways. The trainer has to make sure that the aspect covered is practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

- Nanotechnology
- Renewable Energy
- Data Analytics
- Spintronics
- Superconductivity
- Bio-fuels
- Biophysics
- Quantum Computation
- Plasma Physics
- Cryogenics
- Clean Energy

These themes are merely indicative and other recent and relevant topics of study may be included.

Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

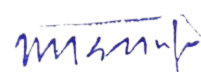

- Relevant study material and references will be provided by the trainer in advance.
- The participants are expected to explore the topic in advance and take active part in the discussions held
- Attending and Participating in all activities of the workshop
- Group Activities have to be undertaken by students as guided by the trainer.
- Evaluation of workshop activities would be done through test and quiz at the end of the workshop.
- Submitting a write up of atleast 500 words about the learning outcome from the workshop.

NUCLEAR & PARTICLE PHYSICS

Course Code: PHY2503

Credit Units:03

Course Objective: The course aims to introduce students to the fundamental concepts of nuclear and sub-nuclear physics and introduction to the physics behind particle detectors.

Course Contents:

Module I: Nuclear Properties

Constituents of nucleus, Non-existence of electrons in nucleus, Nuclear mass and binding energy, features of binding energy versus mass number curve, nuclear radius, angular momentum and parity, qualitative discussion of two-body nuclear forces, nuclear moments, magnetic dipole moment and electric quadrupole moment,

Module II: Radioactive Decays

Modes of decay of radioactive nuclides and decay Laws, Beta decays: β^- , β^+ and electron capture decays, , Parity violation in β decay. Alpha decay: Stability of heavy nuclei against break up, Geiger-Nuttall law, barrier penetration as applied to alpha decay, Gamma transitions: Excited levels, Radio carbon dating, Nuclear Power generation (Fission& Fusion Process) & Nuclear Reactor (if time permits)

Module III Nuclear Reactions and Nuclear Models

Types of nuclear reactions, reactions cross section, conservation laws, Kinematics of nuclear reaction, Q-value and its physical significance, compound nucleus. Liquid drop model, semi-empirical mass formula, condition of stability, evidence for nuclear magic numbers, Shell model, energy level scheme (Introductory).

Module IV: Elementary Particles, their Properties and reactions

Historical introduction, Cosmology, fermions and bosons, particles and antiparticles, Classification of elementary particles, types of interactions, electromagnetic, weak, strong interactions, gravitational interactions, Quantum numbers and conservation laws, isospin, charge conjugation, Yukawa theory, Introduction to quarks and qualitative discussion of the quark model and 3 generation of Quarks qualitatively).

SOLID STATE PHYSICS

Course Code: PHY2506

Credit Units:03

Course Objective:

The aim of this course is to increase understanding of Physics principles as applied to solid state materials and to enhance problem solving and critical thinking skills.

Course Contents:

Module I: Crystal Structure

Crystalline and amorphous solids, Translational symmetry. Elementary ideas about crystal structure, lattice and bases, unit cell, Reciprocal lattice, fundamental types of lattices, Miller indices, lattice planes, simple cubic, f.c.c. and b.c.c. lattices. Laue and Bragg equations. Determination of crystal structure with X-rays. Bragg diffraction. Crystal Structures: sc, fcc, bcc, hcp, diamond, NaCl, CsCl & ZnS.

Module II: Bonding of solids

Different types of bonding- ionic, covalent, metallic, Van der Waals and hydrogen bond, their properties.

Module III: Band theory of solids

Elementary Band theory of solids, Periodic potential and Bloch theorem, Kronig-Penny model, energy band structure. Band structure in conductors, direct and indirect semiconductors and insulators (qualitative discussions), Free electron theory of metals, effective mass, drift current, mobility and conductivity, Weidman-Franz law, Heavy fermions, Hall Effect in metals and Semiconductors: Phenomenology and implication (Qualitative Discussion Only)

Module IV: Dielectric properties of materials and Lattice Vibrations

Polarization. Local Electric Field at an Atom. Depolarization Field. Dielectric Constant. Electric Susceptibility. Polarizability. Classical Theory of Electric Polarizability. Clausius Mosotti Equation. Normal and Anomalous Dispersion.

Lattice Vibrations and Phonons: Linear Monoatomic and Diatomic Chains. Acoustical and Optical Phonons. Qualitative Description of the Phonon Spectrum in Solids. Einstein and Debye Theories of Specific Heat of Solids. T^3 Law.

Module V: Magnetic properties of materials

Dia, para and ferro-magnetic properties of solids. Langevin's theory of diamagnetism and paramagnetism. Quantum theory of paramagnetism, Curie's law. Ferromagnetism, Spontaneous magnetization and domain structure; temperature dependence of spontaneous magnetization; Curie-Weiss law, Explanation of hysteresis.

Examination Scheme:

ATOMIC & MOLECULAR PHYSICS

Course Code: PHY2510

Credit Units: 03

Course Objective:

The aim of the course is to provide theoretical and practical knowledge on the many powerful methods provided by modern atomic- and molecular spectroscopy regarding basic studies as well as practical applications.

Course Contents:

Module I: Atomic Spectrum

Atomic structure, Hydrogen spectra, Bohr's model of one electron atom, Bohr-Sommerfeld model, Good quantum numbers, Stern-Gerlach experiment and spin as an intrinsic quantum number. Incompatibility of spin with classical ideas. Fine structure. Study of fine structure by Michelson interferometer.

Module II: Vector atom model and many electron atoms

Magnetic moment of the electron, Landau's g factor. Vector model – space quantization. L-S and j-j coupling scheme, Spectroscopic terms of many electron atoms in the ground state, Zeeman effect and its explanation using vector atom model. Stark effect, selection rules for Zeeman and Stark effect. L-S and j-j coupling- Interaction with electromagnetic radiation and with static fields.

Module III: Molecular Structure and Spectroscopy

Types of molecular spectra (Basics ideas), experimental study, Theory of pure rotational spectra, theory of rotational vibrational spectra, the Born-Oppenheimer approximation, Molecular rotations and vibrations, Molecular electronic transitions, Diatomic molecules–rotational and vibrational energy levels. Raman effect and its application to molecular spectroscopy (qualitative discussion). Molecular orbital theory.

Module IV: X-rays:

Production of X-rays, characteristic and continuous spectrum of X-rays, Mosley's law and its applications, difference between optical and X-ray spectra.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

PHYSICS LAB-V

Course Code: PHY2504

Credit Units:02

Course Contents:

1. To measure the Resistivity of a Ge Crystal with Temperature by Four-Probe Method
(from room temperature to 200⁰ C) and to determine the Band Gap Eg for it.
2. To determine the Hall Coefficient a Semiconductor.
3. To study the Hysteresis loop (B-H) of ferromagnetic material.
4. To measure the Magnetic susceptibility of Solids and Liquids.
5. To determine the band gap energy of a given semiconductor by four-probe method.
6. To study the characteristics of Photovoltaic cell.
7. To measure the dielectric constant of a ferroelectric material as a function of temperature.
8. To measure magnetic susceptibility of a solution of a paramagnetic salt in water for 3 different concentrations by using Quincke's method.

Any other experiment carried out in the class.

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

SUMMER PROJECT EVALUATION

Course Code: PHY2535

Credit Units:03

Objectives:

Practical training is based on the theoretical subjects studied by subjects. It can be arranged within the college or any in any related industrial unit. The students are to learn various industrial, technical and administrative processes followed in the industry. In case of on campus training the students will be given specific tasks of synthesizing / testing / analysis / characterization. On completion of the practical training the students are to present a report covering various aspects learnt by them and give a presentation of the same.

Chapter Scheme and distribution of marks Report (Probable):

Chapter 1: Introduction –5 marks

Chapter 2: Conceptual Framework/ National/International Scenario – 10 marks

Chapter 3: Presentation, Analysis & Findings -- 15 marks

Chapter 4: Conclusion & Recommendations -- 5 marks

Chapter 5: Bibliography -- 05 marks

Evaluation Scheme:

Continuous Evaluation (Feedback from Industry/ Faculty in charge)	Report	Presentation and Viva	Total
25	40	35	100

Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

- 1) Cover Page:** This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.
- 2) Acknowledgement:** Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.
- 3) Table of Content:** Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.
- 4) Body of the Report:** The body of the report should have these four logical divisions
 - a) Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.
 - b) Conceptual Framework / National and International Scenario:** (relating to the topic of the Project).
 - c) Presentation of Data, Analysis and Findings:** (using the tools and techniques mentioned in the methodology).
 - d) Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.
- 5) Bibliography or References:** This section will include the list of books and articles which have been used in the project work, and in writing a project report.
- 6) Annexures:** Questionnaires (if any), relevant reports, etc.
(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

The Steps of a Project Report

Step I : Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.
- Relevance of the topic

- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

Step II :Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

Step III : Collection of information and data relating to the topic and analysis of the same.

Step IV : Writing the report dividing it into suitable chapters, viz.,

Chapter 1:Introduction,

Chapter 2: Conceptual Framework / National & International Scenario,

Chapter 3: Analysis & Findings

Chapter 4: Conclusion and Recommendations.

StepV: The following documents are to be attached with the Final Project Report.

1) Approval letter from the supervisor(Annexure-IA)

2) Student's declaration(Annexure-IB)

3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation /Institution.

Guidelines for Evaluation:

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines statedbelow.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hardbound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per UniversityRules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her ProjectReport.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to thecandidate.

INTRODUCTION TO MATLAB

Course Code: PHY2512

Credit Units:03

Course Objective: MATLAB is a scientific computing tool which can be used to solve many real life problems coming from various areas of science and engineering. The course introduces the basics of MATLAB; how to effectively use few commonly used built in functions; hands on experience on MATLAB programming and its applications to various practical problems.

Course Contents:

Module-I: Introduction to MATLAB: vector and matrix generation, subscripting and the colon notation, matrix and array operations and their manipulations, introduction to some inbuilt functions. m-files: scripts and functions, editing, saving m-files.

Module-II: Two & three-dimensional graphics: basic plots, change in axes and annotation in a figure, multiple plots in a figure, saving and printing figures, mesh plots, surface plots and their variants.

Module-III: Relational and logical operators: flow control using various statements and loops including If-End statement, If-Else-End statement, nested If-Else-End statement, For-End and While-End loops with Break commands.

Module-IV: Applications of MATLAB: Solving a linear system of equations, calculus of polynomials using inbuilt functions, solving equations in one variable, solving ordinary differential equations using inbuilt functions.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	10	5	70

SEMICONDUCTOR PHYSICS

Course Code: PHY2513

Credit Units:03

Course Objective:

Course Description: This course illustrates the basics of semiconductor theory with emphasis on the formation of energy bands in semiconductors. Applications in terms of studying the device structure and working principle of LEDs, photodiodes and tunnel diodes. Also, the basic structure and working principle of MOS devices is given in addition to the energy band diagram in a metal-semiconductor contact.

Course Content:

Module I: Formation of Energy bands

Formation of Energy bands, Electron effective mass, concept of holes, Density of states function, Fermi-Dirac probability function and distribution, Equilibrium distribution of electrons and holes in intrinsic semiconductors, the n_0 and p_0 equations, intrinsic Fermi level position, dopant energy levels, Equilibrium distribution of electrons and holes in extrinsic semiconductors, Degenerated/Non-degenerated semiconductors.

Module II: Semiconductor Physics

Drift current density, Mobility Effect, Conductivity, Diffusion Current Density, Total Current Density, the Einstein relation, The Hall Effect, Carrier Generation and Recombination, Continuity Equations, time dependent diffusion equation, Basics of ambipolar effect and its transport equation, Haynes-Shockley Experiment.

Module III: Diodes

Visible and Infrared LEDs (Device structure and Working principle), photoconductor and photodiode (device structure and working principle), PN junction solar cells, Tunnel diodes, Impatt diodes and its static and dynamic characteristics, negative differential resistance, Transferred Electron devices (TED): TED device operation; Quantum effect devices (QED): Resonance tunnel diode.

Module IV: Metal-semiconductor contact

MOSFET structure and principle of operation, current-voltage characteristics, MOS structure and its energy band diagram, Depletion layer thickness, work function differences, Flat band voltage - charge distribution, capacitance-voltage characteristics and frequency effects

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;

TERM PAPER & WORKSHOP

Course Code: PHY2531

Credit Units:03

This course will comprise of two components viz Term Paper Workshop.

Component I: Term Paper

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject.

The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

GUIDELINES FOR TERM PAPER

The procedure for writing a term paper may consists of the following steps:

- Choosing a subject
- Finding sources of materials
- Collecting the notes
- Outlining the paper
- Writing the first draft
- Editing & preparing the final paper

1 Choosing a Subject

The subject chosen should not be too general.

2. Finding Sources of materials

- j) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- k) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- l) The sources could be books and magazines articles, news stories, periodicals, scientific journals etc.

3. Collecting the notes

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- j) Get facts, not just opinions. Compare the facts with author's conclusion.
- k) In research studies, notice the methods and procedures, results & conclusions.
- l) Check cross references.

4. Outlining the paper

- g) Review notes to find main sub-divisions of the subject.
- h) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

5. Writing the first draft

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- g) statement of purpose
- h) main body of the paper
- i) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main ideas.

6. Editing & Preparing the final Paper

Before writing a term paper, you should ensure you have a question which you attempt to

answer in your paper. This question should be kept in mind throughout the paper. Include only information/ details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.

- cc) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- dd) Check for proper spelling, phrasing and sentence construction.
- ee) Check for proper form on footnotes, quotes, and punctuation.
- ff) Check to see that quotations serve one of the following purposes:
- gg) Show evidence of what an author has said.
- hh) Avoid misrepresentation through restatement.
- ii) Save unnecessary writing when ideas have been well expressed by the original author.
- jj) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- Titlepage
- Table of contents
- Introduction
- Review
- Discussion & Conclusion
- References
- Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

Discussion

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

Conclusion

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- summary of question posed
- summary of findings
- summary of main limitations of the study at hand
- details of possibilities for related future research

References

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

Conventions

INTRODUCTION TO NANOTECHNOLOGY

Course Code: PHY2606

Credit Units:03

Course Objective:

This course aims at students to get acquainted with introductory knowledge of Nanotechnology.

Course Contents:

Module I: Introduction

Nanoscience and Nanotechnology, Classification of nanostructured materials, Nanoparticles, Quantum wire, Quantum well, Quantum dots, Carbon nanotubes, Graphene, Nanowires, Ultra thin films-multilayered materials, Length scales involved and effect on properties: Mechanical, Electronic, Optical, Magnetic and Thermal properties. Technological advantages of Nanomaterials

Module II: Preparation Methods

Bottom-up synthesis, Top-down approach: Mechanical milling, Sputtering, Evaporation. Material processing by Sol – Gel method, Chemical Vapour deposition and Physical Vapour deposition, Microwave Synthesis of materials, Principles of SEM, TEM and AFM.

Module III: Characterization Techniques

X-ray diffraction technique, Scanning Electron Microscopy, Tunneling Electron Microscopy, Surface Analysis Techniques- AFM, SPM STM, ESCA.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

INSTRUMENTATION TECHNIQUES

Course Code: PHY2610

Credit Units: 03

Course Objective:

This course aims at exposing the students to the instrumentation of the some of the main experimental techniques used in Physics

Course Contents:

Module I: Error analysis and Vacuum technology

Description of error analysis, reporting and usage of uncertainties, Propagation of uncertainties, Error analysis: Instrumental and statistical uncertainties, propagation of errors, Estimation of Mean and Errors, Least Square Fitting, Calibration.

Introduction to Vacuum Systems, Kinetic Theory of Gases, Production of Vacuums, Vacuum Pumps – Rotary, Diffusion, Terbo-molecular, Pressure Measurement, Leak Detection, Specimen handling.

Module II: Instrumentation of Diffraction and Microscopic Techniques

X-ray Sources – Crookes Tubes, Coolidge Tubes, Filters, mono-chromator crystals, Multi-layered monochromators and mirrors, Detectors-Photographic film, Gas detectors, Solid detectors, Diffractometers-The Debye-Scherrer and Hull diffractometer, Bragg-Brentano diffractometers, An introduction to surface diffractometry.

Scanning Electron Microscope Instrumentation- Electron Beam Parameters, Electron. Optical Parameters- Beam Energy, Beam Diameter, Beam Current, Beam Solid Angle. SEM Imaging Modes- High Current Mode, Resolution Mode, Low Voltage Modes.

Module III: Instrumentation of Spectroscopic Techniques

Gas Discharge Lamps, Spectral Lamps and Shapes of Spectral Lines-Low Pressure Spectral Lamps, Shape of Spectral Lines.

Optical Filters, Polarizers and Phase Plates. Monochromators – Prism Monochromator, Grating Monochromators

Examination Scheme:

LOW TEMPERATURE PHYSICS AND SUPERCONDUCTIVITY

Course Code: PHY2605

Credit Units:03

Course Objective:

The aim of this course is to get acquainted the students with physics of ultra low temperatures, physics of materials at zero resistance and their applications in our real world.

Course Contents:

Module I: Superconductivity

Basic properties of superconductors, thermodynamics, superconductors in magnetic fields The London equations, electromagnetic properties, penetration depth, Ginzburg-Landau theory, coherence length, type I and type II superconductors, BCS theory, second quantization, Cooper- pairing, energy gap Tunneling, Josephson effects and SIS tunneling, High Tc superconductors, structure, d-wave symmetry, phase diagrams, Coexistence of superconductivity and Magnetism Overview of applications, squids, microwave devices, power applications.

Module II: Superfluidity

Two – Fluid Model, Bose – Einstein Condensation, Macroscopic Quantum State, Properties of liquid helium-4, Phenomena near The Lambda Point, phase diagrams, Superfluidity, Superfluid phenomena, rollin film, fountain effect, second sound Excitations and vortices in superfluids, Properties of liquid helium-3, the phase diagram, Symmetry properties of superfluid helium-3, Macroscopic Quantum Interference – Josephson Effect, Normal Fluid Density – Quasiparticle Scattering , Collective Excitations, Sound Propagation.

Module III: Cryogenics

Thermal and electrical properties for different materials at low temperature, Thermodynamic Properties, Liquefaction of gases. Regenerative principle Cooling methods above 1K, Joule-Thompson, Gifford-McMahon, evaporation cooling, Cooling methods below 1K, dilution & refrigeration, Methods of liquefaction of gases (Laser Cooling, Cascade process, Linde's process, and adiabatic demagnetization process) – Measurement of cryogenic temperatures.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

INTRODUCTION TO ASTRONOMY

Course Code: PHY2611

Credit Units:03

Course Objective: This course aims at students to get acquainted with big bang picture, dark energy and cosmology.

Course Contents:

Module I: Distance measurement and overview:

Spectrum of EM radiation, Atmospheric absorption, various types of telescopes, Overview of Astronomy, magnitude, distances, various methods to measure distances.

Module II: Sun and the Stars

Sun as a star, Structure of the Sun, types of stars, Color magnitude diagram, main sequence stars, evolution of stars. White dwarf, neutron star and black holes.

Module III: Galaxies and Extragalactic Astronomy

Milky way galaxy, dynamics of stars, types of galaxies, Hubble classification, the local group, clusters of galaxies.

Module IV: Cosmology

The big bang picture, cosmic microwave background, early universe, basic ideas and observations behind dark matter and dark energy, Structure formation in the universe.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;
A: Attendance

TERM PAPER & WORKSHOP

Course Code: PHY2631

Credit Units:03

This course will comprise of two components viz Term Paper Workshop.

Component I: Term Paper

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject.

The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

GUIDELINES FOR TERM PAPER

The procedure for writing a term paper may consists of the following steps:

- Choosing a subject
- Finding sources of materials
- Collecting the notes
- Outlining the paper
- Writing the first draft
- Editing & preparing the final paper

1. Choosing a Subject

The subject chosen should not be too general.

2. Finding Sources of materials

- m) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- n) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- o) The sources could be books and magazines articles, news stories, periodicals, scientific journals etc.

3. Collecting the notes

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- m) Get facts, not just opinions. Compare the facts with author's conclusion.
- n) In research studies, notice the methods and procedures, results & conclusions.
- o) Check cross references.

4. Outlining the paper

- i) Review notes to find main sub-divisions of the subject.
- j) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

5. Writing the first draft

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- j) statement of purpose
- k) main body of the paper
- l) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main ideas.

6. Editing & Preparing the final Paper

- kk) Before writing a term paper, you should ensure you have a question which you attempt to

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

answer in your paper. This question should be kept in mind throughout the paper. Include only information/ details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.

- ll) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- mm) Check for proper spelling, phrasing and sentence construction.
- nn) Check for proper form on footnotes, quotes, and punctuation.
- oo) Check to see that quotations serve one of the following purposes:
- pp) Show evidence of what an author has said.
- qq) Avoid misrepresentation through restatement.
- rr) Save unnecessary writing when ideas have been well expressed by the original author.
- ss) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- Titlepage
- Table of contents
- Introduction
- Review
- Discussion & Conclusion
- References
- Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

Discussion

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

Conclusion

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- summary of question posed
- summary of findings
- summary of main limitations of the study at hand
- details of possibilities for related future research

References

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

Conventions

Monographs

Crystal, D. (2001), Language and the internet. Cambridge: Cambridge University Press.

Edited Volumes

Gass, S./Neu, J. (eds.) (1996), Speech acts across cultures. Challenges to communication in a second

language. Berlin/ NY: Mouton de Gruyter.

[(eds.) is used when there is more than one editor; and (ed.) where there is only one editor. In German the abbreviation used is (Hrsg.) for Herausgeber].

Edited Articles

Appendix

The appendix should be used for data collected (e.g. questionnaires, transcripts) and for tables and graphs not included in the main text due to their subsidiary nature or to space constraints in the main text.

Component II: Workshop

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two ways. The trainer has to make sure that the aspect covered is practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

- Nanotechnology
- Renewable Energy
- Data Analytics
- Spintronics
- Superconductivity
- Bio-fuels
- Biophysics
- Quantum Computation
- Plasma Physics
- Cryogenics
- Clean Energy

These themes are merely indicative and other recent and relevant topics of study may be included.

Guidelines for Workshop

- The procedure for earning credits from workshop consists of the following steps:
- Relevant study material and references will be provided by the trainer in advance.
- The participants are expected to explore the topic in advance and take active part in the discussions held
- Attending and Participating in all activities of the workshop
- Group Activities have to be undertaken by students as guided by the trainer.
- Evaluation of workshop activities would be done through test and quiz at the end of the workshop.
- Submitting a write up of at least 500 words about the learning outcome from the workshop.

COMPUTER FORENSICS

Course Code: FCH2151

Credit Units: 3

Course Objectives:

- To correctly define and cite appropriate instances for the application of computer forensics. Correctly collect and analyze computer forensic evidence
- Identify the essential and up-to-date concepts, algorithms, protocols, tools, and methodology of Computer Forensics

Course Contents:

Module 1: Cyber Crime

Introduction to Digital Forensics, Definition and types of cybercrimes, electronic evidence and handling, electronic media, collection, searching and storage of electronic media, introduction to internet crimes, hacking and cracking, credit card and ATM frauds, web technology, cryptography, emerging digital crimes and modules.

Module 2: Digital Forensics

Forensics Investigation Process: Pre-search consideration, Collection of Evidences from crime scene, Acquisition, Duplication and Preservation of evidences, Examination and Analysis of evidences, Storing of Evidences, Documentation and Reporting, Maintaining the Chain of Custody. Hashing and its importance. Understanding Storage Formats for Digital Evidences – Raw Format, Proprietary Formats, Advanced Forensic Formats. Data Acquisition of live system, Shutdown Systems and Remote systems. Digital Forensics Standard Operating Procedures. Software and Hardware Tools used in Forensic Analysis – Open Source and Proprietary tools. Challenges and issues in Cyber-crime investigations and Digital forensics, Legal and privacy issues.

Module 3: Computer Forensics

Definition and Cardinal Rules, Data Acquisition and Authentication Process, Windows Forensic Analysis of File Systems-FAT12, FAT16, FAT32 and NTFS, UNIX file Systems, Mac file systems, Embedded System Analysis, Network Forensic Analysis Overview, Cloud Computing-an introduction.

Module 4: Forensic Tools and Processing of Electronic Evidence

Introduction to Forensic Tools, Usage of Slack space, tools for Disk Imaging, Data Recovery, Vulnerability Assessment Tools, Encase and FTK tools, Anti Forensics and probable counters, retrieving information, process of computer forensics and digital investigations, processing of digital evidence, digital images, damaged SIM and data recovery, multimedia evidence, retrieving deleted data: desktops, laptops and mobiles, retrieving data from slack space, renamed file, ghosting, compressed files.

Syllabus - Semester Second

ETHICS, POLICIES AND THE IT ACT

Course Code: FCH2251

Credit Units: 3

Course Objectives:

To understand the ethics and laws by which cyberspace is governed in our country and worldwide.

Course Contents:

Module 1: Introduction

Basics of Law and Technology, Introduction to Indian Laws, Scope and Jurisprudence, Digital Signatures, E Commerce: Introduction, possible crime scenarios, law coverage, data interchange, mobile communication development, smart card and expert systems.

Module 2: Indian and International Laws

Indian Laws, Information Technology Act 2000, Indian Evidence Act, India Technology Amendment Act 2008, Introduction to Indian Penal Code, Computer Security Act 1987, National Information Infrastructure Protection Act 1996, Fraud Act 1997, Children Online Protection Act 1998, Computer Fraud and Abuse Act 2001. Introduction to International Laws, International Cyber Laws, Policy and Compliance, Corporate IT Policy Formulations.

Module 3: Intellectual Property Rights

Intellectual Property, IP Theft, Copyright, Trademark, Privacy and Censorship, Introduction to Cyber Ethics, rights over intellectual property, Compliance Auditing, Ethical hacking.

Examination Scheme:

Components	CT	HA	S/V/Q	A	EE

Syllabus - Semester Third

BIOMETRIC TECHNOLOGY

Course Code: FCH2352

Credit Units: 3

Course Objectives:

- To understand fundamentals of biometric system and its performance metrics
- To understand the components, issues and approaches for physiological biometrics.
- To learn the technology behind behavioral biometric systems like voice scan, signature scan and gait analysis along with their challenges.
- Know the applicability and privacy concerns in biometrics.

Course Contents:

Module 1: Biometric Fundamentals

Introduction: Biometric fundamentals – Biometric technologies – Biometrics Vs traditional techniques – Characteristics of a good biometric system – Benefits of biometrics, Components and steps of a biometric system, Key biometric processes: verification, identification and biometric matching – Performance measures in biometric systems, FAR, FRR, FTE rate, EER and ATV rate, Layered biometric solutions, Types of biometrics and commonly used biometrics.

Applications of a Biometric System

Applications of Biometric Systems: industry, Government, offices, banks, defense and forensics, Security and Privacy Issues.

Module 2: Physiological Biometrics: Leading technologies : Finger-scan – Facial-scan – Iris-scan – components, working principles, competing technologies, strengths and weaknesses – Other physiological biometrics : Hand-scan, Retina-scan – components, working principles, competing technologies, strengths and weaknesses – Automated fingerprint identification systems.

Module 3: Leading Behavioral Biometrics technologies: Voice scan – Signature scan– Gait scan– components, working principles, strengths and weaknesses, challenges and scope of behavioral biometrics.

Voice Recognition: Voice scan, speaker features, short term spectral feature extraction, speaker matching, Gaussian mixture model, NIST speaker Recognition Evaluation Program.

Speech recognition: Introduction-Regular Expressions and automata-Words and transducers-N-grams Part of speech tagging-Hidden Markov and Entropy models, Speech-Phonetics-Speech synthesis-Automatic speech recognition, speech recognition versus voice recognition.

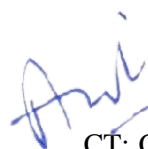

Module 4: Gait Pattern Analysis

Fundamentals of Gait Analysis, Gait Analysis: Considerations and Terminology, Motion Analysis Systems, Ground Reaction Forces, Introduction to EMG, Motion Analysis, Gait Cycle, Abnormalities in Gait, Challenges in gait recognition

Examination Scheme:

Components	CT	HA	S/V/Q	ATTD	EE
Weightage (%)	10	7	8	5	70

CYBER SECURITY

Course Code: FCH2551

Credit Units: 3

Course Objectives:

- Understand the threats in networks and security concepts.
- Apply authentication applications in different networks.
- Understand security services for email.
- Awareness of firewall and its applications.

Course Contents:

Module 1: Cyberspace

Ethical hacking, Attack Vectors, Cyberspace and Criminal Behaviour, Clarification of Terms, Traditional Problems associated with Computer Crimes, Computer language, Network Language, Realms of Cyber world, brief history of the internet, contaminants and destruction of data, unauthorized access, computer intrusions, white-collar crimes, viruses and malicious code, virus attacks, pornography, software piracy, mail bombs, exploitation, stalking and obscenity in internet.

Module 2: Network Forensics

Network Forensics: Networking, Overview of OSI Model and TCP/IP Protocol. IP Addressing and NAT. Types of IP addresses, Digital and Analog Signaling Methods, Network Types (LAN, MAN and WAN) and Topologies, Network Hardware devices (hubs, switches, bridges, repeaters, routers etc.) and Client/Server Computing, Routers and Routing Protocols.

Monitoring of computer network and activities, Live Packet Capturing and Analysis. Searching and collection of evidences from the network. Network Intrusion Detection and Analysis. SQL Injection, Event Log Aggregation – role of logs in forensic analysis, tools and techniques. Investigating network attacks. Evidence collection from Routers and CCTV DVRs.

Module 3: Network Security

Investigation Tools, e-discovery, EDRM Models, digital evidence collection and preservation, email investigation, email tracking, IP tracking, email recovery, search and seizure of computer systems, password cracking.

Module 4: Operating Systems

Operating System: Introduction, Objectives and Functions of Operating System. Types of Operating system- Windows, Linux, Mac, Booting process of computers.

Windows artifact analysis, Internet Artifacts, OS Artifacts, File System Artifacts, Registry Artifacts, Application Artifacts, Report Writing.

Examination Scheme:

Components	CT	HA	S/V/Q	A	EE

INCIDENT RESPONSE MANAGEMENT

Course Code: FCH2651

Credit Units: 3

Course Objectives:

- Defining an incident relating to cyber security.
- Recognizing an Incident
- Protocols for first on crime scene investigations.
- Government approved handling of computer crime scenarios.

Course Contents:

Module 1: Introduction

Cyber Incident Statistics, Computer Security Incident, Information as Business Asset, Data Classification, Information Warfare, Key Concepts of Information Security, Vulnerability, Threat and Attacks, Types of Computer Security Incidents, Examples of Incidents, Incidents Categorization, Low Level Incident, Mid Level Incident, High Level Incident.

Module 2: Incident Response Management

Introduction to Incident Response Process, Preparing for Incident Response, detection of an Incident, IRM life cycle-preparation, Identification, Detection, Containment, Eradication, Recovery, lessons learnt, Investigations of Cyber Crime cases as per IRM cycles, opinion formatting for cyber crime cases, court testimonies, case studies.

Module 3: Investigation of Incidents

Incident Prioritization, Incident Response and Handling process, Disaster Recovery, Technologies and Impacts, Virtualization and Impacts, Estimated Cost of an Incident, Incident Reporting Organizations, Vulnerability Reports, Incident Identification, Need and Goals of Incident Response.

Module 4: Incident Response Team

Incident Response Team development, Security Awareness and Training Checklist, Incident Management, Purpose of Incident management, Incident management process, Incident management team, Incident Response Team and Members, Member Goals and Responsibilities, Developing Skills in Incident Response Personnel, Incident Response Team Structure, Team Dependencies and Services.

OPTIMIZATION TECHNIQUES

Course Code: MTH2151

Credit Units: 03

Course Objective:

The problems in optimization are the most common applications of mathematics. The main aim of this course is to present different methods of solving optimization problems in the areas of linear programming.

Course Contents:

Module I: Introduction to OR

Historical Development of OR, OR models and Advantages, Methodology of OR, Advantages of OR, Features of OR solution, Applications and Scope of OR

Module II: Linear Programming Problems (LPP)

Definition of LPP, General Structure of Linear Programming, Formulation of LPP, Advantages and Limitations of Linear Programming, Graphical Solutions of Linear Programming Problems. Simplex Method, Degeneracy, Duality.

Module III: Transportation Problems

Introduction to Transportation Model, Degeneracy in TP, Solution Techniques of TP, Different Methods for Obtaining Initial Basic Feasible Solutions viz. Matrix Minima Method, Row Minima Method, Column Minima Methods, Vogel's Approximation Method, Techniques for Obtaining Optimal Basic Feasible Solution – Stepping Stone and MODI Method. **Assignment Problems:** Definition, Types of Assignment Problems, Hungarian Method for AP.

Module IV: Game Theory

Concept of Game problem. Rectangular games. Pure strategy and Mixed strategy. Saddle point and its existence. Optimal strategy and value of the game. Algebraic method, Graphical method and Dominance method of solving Rectangular games. Inter-relation between the theory of Games and L.P.P

STATISTICS

Course Code: MTH2251

Credit Units: 03

Course Objective:

Statistics plays an important role in data analytics. The main aim of this course is to help the students to read, classify and then interpret the data given to them and draw conclusions.

Module I: Data and Representation

Introduction to Statistics, Collection of data, classification and tabulation of data, Types of data: Primary data, Secondary data, Presentation of data Diagrammatic and Graphical Representation: Histogram, frequency curve, frequency polygon, Ogive curves, stem and leaf chart.

Module II: Measures of Central Tendency and Dispersion

Arithmetic Mean (A.M.) Definition, Mode, Median, Partition Values : Quartiles, Deciles and Percentiles, Box Plot, Percentile ranks. Means of transformed data, Geometric Mean (G.M.) Definition, Harmonic Mean (H.M.), Weighted Mean : Weighted A.M., G.M. and H.M.

Range, Mean deviation Mean square deviation, Variance and Standard Deviation, Combined variance (derivation for 2 groups), Combined standard deviation.

Module III: Correlation and Regression

Bivariate normal distribution, types, importance, methods of measuring correlation-scatter diagram, Karl Pearson's Coefficient of Correlation and Spearman's rank Correlation. Regression lines, Difference between regression and correlation, uses of Regression.

Module IV : Sampling theory and tests of significance

Methods of sampling (Description only): Simple random sampling with and without replacement (SRSWR and SRWOR) stratified random sampling, systematic sampling.

Tests of significance – z, t, chi-square and F.

Examination Scheme:

Components	CD	CT1	SA	A	EE
Weightage	5	10	10	5	70

CD= Class Discussion, CT 1= Class Test, SA= Short Assignments, A= Attendance. EE= External Examination

Syllabus - Semester Third

DATA MINING

Course Code: MTH2351

Credit Units: 03

Module 1: DATA WAREHOUSING

Data warehousing Components –Building a Data warehouse — Mapping the Data Warehouse to a Multiprocessor Architecture – DBMS Schemas for Decision Support – Data Extraction, Cleanup, and Transformation Tools –Metadata.

Module 2: BUSINESS ANALYSIS

Reporting and Query tools and Applications – Tool Categories – The Need for Applications – Cognos Impromptu – Online Analytical Processing (OLAP) – Need – Multidimensional Data Model – OLAP Guidelines – Multidimensional versus Multirelational OLAP – Categories of Tools – OLAP Tools and the Internet.

Module 3 : DATA MINING , CLUSTERING AND APPLICATIONS AND TRENDS IN DATA MINING

Introduction – Data – Types of Data – Data Mining Functionalities – Interestingness of Patterns – Classification of Data Mining Systems – Data Mining Task Primitives – Integration of a Data Mining System with a Data Warehouse – Issues –Data Preprocessing, Cluster Analysis - Types of Data – Categorization of Major Clustering Methods – Kmeans – Partitioning Methods – Hierarchical Methods - Density-Based Methods –Grid Based Methods – Model-Based Clustering Methods – Clustering High Dimensional Data - Constraint – Based Cluster Analysis – Outlier Analysis – Data Mining Applications.

Module 4 : ASSOCIATION RULE MINING AND CLASSIFICATION

Mining Frequent Patterns, Associations and Correlations – Mining Methods – Mining Various Kinds of Association Rules – Correlation Analysis – Constraint Based Association Mining – Classification and Prediction - Basic Concepts - Decision Tree Induction - Bayesian Classification – Rule Based Classification – Classification by Backpropagation – Support Vector Machines – Associative Classification – Lazy Learners – Other Classification Methods – Prediction

Syllabus - Semester Fourth

DATABASE MANAGEMENT SYSTEM

Course Code: MTH2451

Credit Units: 03

Module-I

INTRODUCTION: Introduction; An example; Characteristics of Database approach; Actors on the screen; Workers behind the scene; Advantages of using DBMS approach; A brief history of database applications; when not to use a DBMS. Data models, schemas and instances; Three-schema architecture and data independence; Database languages and interfaces; The database system environment; Centralized and client-server architectures; Classification of Database Management systems.

Module-II

ENTITY-RELATIONSHIP MODEL: Using High-Level Conceptual Data Models for Database Design; An Example Database Application; Entity Types, Entity Sets, Attributes and Keys; Relationship types, Relationship Sets, Roles and Structural Constraints; Weak Entity Types; Refining the ER Design; ER Diagrams, Naming Conventions and Design Issues; Relationship types of degree higher than two.

Module-III

RELATIONAL MODEL AND RELATIONAL ALGEBRA: Relational Model Concepts; Relational Model Constraints and Relational Database Schemas; Update Operations, Transactions and dealing with constraint violations; Unary Relational Operations: SELECT and PROJECT; Relational Algebra Operations from Set Theory; Binary Relational Operations : JOIN and DIVISION; Additional Relational Operations; Examples of Queries in Relational Algebra; Relational Database Design Using ER- to-Relational Mapping.

Module-IV

TRANSACTION MANAGEMENT: The ACID Properties; Transactions and Schedules; Concurrent Execution of Transactions; Lock - Based Concurrency Control; Performance of locking; Transaction support in SQL; Introduction to crash recovery; 2PL, Serializability and Recoverability; Lock Management; Introduction to ARIES; The log; Other recovery-related structures; The write-ahead log protocol; Checkpointing; Recovering from a System Crash; Media Recovery; Other approaches and interaction with concurrency control.

Syllabus - Semester Fifth

INTRODUCTION TO FINANCIAL MODELLING

Course Code: MTH2551

Credit Units: 03

Prerequisites: Introduction to Probability Theory

Basic notions %G-%@ Cash flow, present value of a cash flow, securities, fixed income securities, types of markets.

Forward and futures contracts, options, properties of stock option prices, trading strategies involving options, option pricing using Binomial trees, Black %G-%@ Scholes model, Black %G-%@ Scholes formula, Risk-Neutral measure, Delta %G-%@ hedging, options on stock indices, currency options.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

Syllabus - Semester Sixth

STATISTICAL QUALITY CONTROL

Course Code: MTH2651

Credit Units: 03

Total quality control in an industry. Quality planning, quality conformance, quality ad-herence. Quality assurance and quality management functions.

Control charts and allied techniques. Concept of quality and meaning of control. Concept of inevitability of variation-chance and assign-able causes. Pattern of variation. Principles of rational sub-grouping.

Different types of control charts. Concept of process capability and its comparison with design specifications, CUSUM charts.

Acceptance sampling. Sampling inspection versus 100 percent inspection. Basic concepts of attributes and variables inspection. OC curve, Single, double, multiple and sequential sampling plans, Management and organisation of quality control.

CLASSICAL MECHANICS

Course Code: PHY4102

Credit Units: 04

Course Objective:

A detailed exposition of classical mechanics for the students, opting for physics is vitally important for a clear understanding of recent intricate theories of quantum mechanics, Modern Physics and research to build a well developed and conceptualized foundation.

Course Contents:

Module I: Symmetries and Conservation Laws

Mechanics of a system of particles, constraints, D'Alembert's principle, Variational calculus and its applications, Hamilton's variational Principle, Lagrangian equations, applications of Lagrangian formulation, conservation theorems and symmetry properties.

Module II: Hamiltonian Formulation

Hamiltonian equation of motion, applications of hamiltonian formulation, Principle of least action, the equations of canonical transformations, cyclic coordinates, phase space and Liouville's theorem, Poisson bracket, Jacobi's Identity .

Module III: Central Force Problem

Reduction to one body problem, equation of motion and first integral, one dimensional problem and classification of orbits, Differential equation for the orbit, Kepler problem and planetary motion, Rutherford formula, scattering in central force field, transformation to laboratory frames.

Module IV: Rigid Body and Vibrating System

Euler angles, tensor of inertia, kinetic energy of a rotating body, symmetric top and applications. Vibrating string, solution wave equation, normal vibrations, dispersion, coupled vibrating system.

Examination Scheme:

ELECTRONICS

Course Code: PHY4103

Credit Units: 04

Course Objectives

The objective of this course is to

- To provide an overview of basic combinational circuits-logic gates, flip-flops, registers, operational amplifier, modulation techniques and integrated circuit fabrication.
- To serve as the foundation for practical lab experiments.

Course Outcomes

On completion of this course, the students will be able to

- CO1 Clearly understand the basics of digital electronics.
- CO2 Understand the Integrated Circuit Fabrication and Technology.
- CO3 Clearly define the characteristics of an operational amplifier.
- CO4 Clearly understand the concept of modulation and demodulation

Catalog Description

This course gives a comprehensive view of the digital electronics, integrated circuit fabrication and technology, operational amplifiers, modulation and demodulation techniques. It covers the basic operation and some common applications.

Course Content

Module I: Combinational Circuits

12 Lectures

Truth tables Logic gates: OR, AND, Inverter gates, The Universal NOR and NAND gates, XOR and XNOR gates, De-Morgan's Theorem, Reduction Technique Karnaugh map simplification. Parity check. The half adder, the Full adder, half and full subtractor. Sequential Logic: Latches, R.S. Flip/Flop, The D.Flip/Flop, T.Flip/Flop, J.K. Flip/flop, Master/slave flip/flop, Race Problem. Universal Shift Register, shift counter, Ring Counter.

Module II: Operational Amplifiers

16 Lectures

The ideal Op-Amp-inverting, non-inverting and differential amplifiers-CMRR; Op-Amp IC building blocks-emitter coupled differential amplifier, active load, level shifting and output stage; Op-Amp characteristics-open-loop input output characteristics, frequency response and slew rate; Op-Amp applications-adder, subtractor, integrator, differentiator, comparator, voltage-to-current converter, current-to-voltage converter and logarithmic amplifier.

Module III: Modulation Techniques

12 Lectures

Definition, Amplitude modulation, Methods of Amplitude Modulation, Frequency Modulation, Phase Modulation, Pulse Modulation Systems- PAM, PWM, PPM, PCM, Delta Modulation, Principle of AM Detection. Digital modulation schemes: amplitude, phase and frequency shift keying schemes (ASK, PSK, FSK). Multiplexing - time division and frequency division. Applications of Modulation.

Module IV: Integrated Circuit Fabrication

8 Lectures

Integrated-Circuit Technology, Advantages and limitations of Integrated Circuits, Basic Monolithic Integrated Circuits, Epitaxial Growth, Masking and Etching, Diffusion of Impurities, Integrated Capacitors and Inductors, Large-Scale and Medium-Scale Integration, Metal-Semiconductor Contact

Modes of Evaluation: Quiz/Assignment/ Seminar/Written Examination
Examination Scheme:

Components	CT	HA	S/V/Q	A	EE

QUANTUM MECHANICS-I

Course Code: PHY4109

Credit Units: 04

Course Objective:

Course Contents:

Module I: Introductory concepts

A quick review of failure of classical Physics, Wave particle duality, Wave-packet, Uncertainty principle and its applications

Schrodinger's time dependent equation; Statistical interpretation of wave function, normalization, probability current density, expectation values, Ehrenfest's theorem, Time independent Schrodinger equation, stationary states, orthogonality, Energy, linear momentum and angular momentum operators.

Module II: General Formalism

Linear vector space, linear operators, eigenfunction and eigenvalues, Hermitian operator, Postulates of Quantum Mechanics, Simultaneous measurability of observables, General Uncertainty relation, Dirac's notation (bra & ket), Schrodinger and Heisenberg representation.

Module III: Applications

Quick review of particle in 1D and its extension to 3D box, degeneracy of energy states. Square potential barrier, quantum tunneling and alpha emission. Harmonic Oscillator using operator method, creation and annihilation operators.

Module IV: Hydrogen atom and angular momentum

Schrodinger equation in three dimension (spherical coordinates), separation of variables, radial equation, angular equation, spherical harmonics, angular momentum and their commutation relation, L^2 and L_z operators, Ladder operator.

COMPUTATIONAL PHYSICS

Course Code: PHY4110

Credit Units: 04

Course Objective:

This course aims at exposing the students to basic Computational Physics which will be useful for them to solve the problems of Physics.

Course Contents:

Module I Introduction to MATLAB and Plotting: vector and matrix generation, subscripting and the colon notation, matrix and array operations and their manipulations, introduction to some inbuilt functions. Two & three-dimensional graphics: basic plots, change in axes and annotation in a figure, multiple plots in a figure, saving and printing figures, mesh plots, surface plots and their variants.

Module II m-files: scripts and user defined functions, calling functions into a script file, subfunctions, and nested functions, concept of local and global variable, few examples of in-built functions, editing, saving m-files.

Module III Loops and Conditional statements: Flow control using various statements and loops including For-End and While-End loops with Break commands. Conditional Statements: If-End statement, If-Else-End statement, nested If-Else-End statements.

Module IV Applications of MATLAB: Introduction to builtin functions: related to matrix inversion, eigenvalues, eigenvectors, condition number; for data representation: bar charts, histograms, pie chart, stem plots etc; for solving various type of differential equations; for specialized plotting e.g., contour plots, sphere, and animations.

INTEGRATED PHYSICS LAB-I

Course Code: PHY4111

Credit Units: 03

List of Experiment (Any Eight)

1. Data and error analysis.
2. Plotting and curve fitting software
3. Use of the instruments CRO, multimeter.
4. To design and study various aspects of frequency modulation and demodulation. PAM, PWM and PPM Modulation and demodulation.
5. To study the frequency response of an operational amplifier & to use operational amplifier for different mathematical operations.
6. To design and study the characteristics of a regulated power supply and voltage multiplier circuits.
7. To design a rectangular/triangular waveform generator using Comparators and IC8038.
8. To design (i) Low pass filter (ii) High pass filter; (iii) All-pass filter; (iv) Band pass filter (v) Band-reject passive filter.
9. To design and study logic gates and flip flop circuits.
10. Use of timer IC 555 in astable and monostable modes and applications involving relays, LDR.
11. The Torsional Pendulum and Moment of Inertia
12. Study of the Coriolis effect.
13. Determination of Lande's factor using ESR spectrometer.
14. To plot the polar curve of a filament lamp and to determine its mean spherical intensity.
15. Raman effect in liquids.
16. Rydberg's constant using constant deviation prism.

STATISTICAL MECHANICS

Course Code: PHY4202

Credit Units: 04

Course Objective: The aim of the course is to introduce the concept of statistical mechanics and applications to various problems in applied Physics.

Course Contents:

Module-I:

Kinetic theory of gas, Probability concepts in statistical mechanics, Random walk problem, General Aspects of Probability Distributions

The Statistical Basis of Thermodynamics, The macroscopic and the microscopic states, Contact between statistics and thermodynamics, Entropy on microscopic scale, physical significance of the number $\Omega(N,V,E)$, Thermodynamic equilibrium, Mechanical equilibrium, Chemical equilibrium, Review of phase space, Liouville's theorem, basic postulates of statistical mechanics, The classical ideal gas, The entropy of mixing and Gibb's paradox, Sackur tetrode equation of entropy, Correct Boltzmann counting

Module II Elements of ensemble theory, microcanonical, canonical, grand canonical ensemble, quantum states and the phase space, equilibrium between system and a heat reservoir, partition function, physical significance of the various statistical quantities in the canonical ensemble, The classical systems, energy fluctuations in the canonical ensemble, statistics of paramagnetism, Boltzmann's equation, Maxwell & Boltzmann statistics, Equipartition theorem and its Simple applications, Virial theorem, Maxwell velocity distribution, related distributions and mean values.

Module III Equilibrium between a system and a particle- energy reservoir, density and energy fluctuations in Grand canonical ensemble, formulation of quantum statistics, Fermi-Dirac and Bose-Einstein statistics. Applications of the formalism to: (a) Ideal Bose gas, The field of sound waves, Einstein and Debye theory of specific heat, properties of black-body radiation, Bose- Einstein condensation, experiments on atomic BEC, (b) Ideal Fermi gas, properties of simple metals, Pauli paramagnetism, electronic specific heat, Compressibility of Fermi gas, A relativistic degenerate electron gas.

Module IV Phase transition, non-equilibrium statistical mechanics, Ising model, fluctuation-dissipation

QUANTUM MECHANICS-II

Course Code: PHY4208

Credit Units: 04

Course Objective:

The course is intended to introduce the concept of quantum mechanics to students at the advanced level so that they can solve problem of various branches of Physical Sciences.

Course Contents:

Module I: Spin & Identical Particles

Spin, Stern-Gerlach experiment, Pauli spin matrices, eigenvalues of J^2 and J_z , addition of angular momenta, Clebsch-Gordan coefficients.

Identical particles, particle exchange operator, symmetric and anti-symmetric wave functions, Pauli principle and Slater determinant, spin functions for system with more than one electron.

Module II: Perturbation theory

Time-independent perturbation theory: Basic concepts, Non-degenerate energy levels, degenerate perturbation theory, fine structure of Hydrogen, Spin-orbit coupling, Zeeman effect.

Time-dependent perturbation theory: 1st order perturbation, Fermi's Golden rule, absorption and emission of radiation, Einstein A and B coefficient.

Module III: Variational principle and WKB approximation

Theory of Variational principle; Ground state energy for 1D harmonic oscillator, Delta function potential, and He.

WKB approximation, classical region, tunneling, Gamow's theory of alpha decay, connection formula.

Module IV: Scattering theory and relativistic wave equation:

Scattering cross section, scattering amplitude, Centre of Mass frame, Laboratory frame, partial wave, scattering by a central potential (partial wave analysis), phase shift, Born approximation, Validity of Born Approx.

Klien-Gordon equation and its interpretation, Dirac equation for a free particle.

ELECTRODYNAMICS

Course Code: PHY4215

Credit Units: 04

Course objective:

The course is suitable as core course for Master of Science Applied Physics students. The course is designed to familiarize and train the student with the tools and techniques used to assess the various problems of electrodynamics. The course provides the in-depth knowledge of electrostatics, magnetostatics, the cases of non-static current and charge densities and related changes. The course also aims at developing an ability to analyse the situation and to apply appropriate techniques to reach to solutions of a particular problem of electrodynamics.

Course Contents:

Module I-Electromagnetic (EM) Fields and Potentials

Dirac-delta function. Green's Theorem, Electrostatics: Laplace and Poisson equations; Dirichlet and Neumann boundary conditions; Method of images (point charge near a conducting plane and a sphere); Separation of variables in Cartesian and spherical coordinates. Magnetostatics: Curl and divergence of magnetic field; vector potential; Divergence of vector potential, Magnetic Scalar potential. Correction in the Ampere's law and Maxwell's equation.

Module II: Electromagnetic Waves and Propagation

EM waves in vacuum: Wave equation of E & B; Energy density of Fields and Poynting's theorem; conservation of momentum and Maxwell's stress tensor. Boundary conditions on field vectors D, E, B and H; Gauge transformations: Lorentz and Coulomb gauges. energy & momentum of EM waves; Propagation of EM waves in matter: propagation in linear media, reflection and transmission, Fresnel equation; Polarisation of Electromagnetic waves, Brewster's angle, EM waves in conducting media, skin depth, reflection and transmission in conducting media.

Module III: Guided Waves and Radiation Guided Waves: Electromagnetic waves in ionosphere, Wave guides; TE, TM and TEM modes; Rectangular wave guide; Dispersion of EM waves and Cauchy's formula, resonant cavity Radiation: Retarded Potentials, Lienard-Wiechert potentials; fields of a moving point charge; electric dipole radiation magnetic dipole radiation.

Module IV: Relativistic Electrodynamics Four vector formalism: Four vectors; Covariant and contravariant vectors; Transformation of Four vectors; Velocity, Current, Momentum and Potentials as four vectors. Lorentz transformation in four vector notation Covariance of Electrodynamics:

ATOMIC AND MOLECULAR PHYSICS

Course Code: PHY4216

Credit Units: 04

Course Objective: The aim of this course is to give the basic ideas about the structure of atoms and molecules, electronic structure, interaction of radiation and external fields with atoms and molecules.

Course Contents:

Module I

Quantum states of one electron atoms, Hydrogen spectrum, Larmor's theorem, Magnetic moment and Bohr magneton, Spin orbit interaction, hydrogen fine structure, Vector atom model, two electron systems, LS and jj Coupling schemes, spectroscopic terms, equivalent and non equivalent atoms, Helium atom spectrum, spectra of alkali atoms, Nuclear spin, magnetic moment, isotopic effect and Hyperfine structure, Normal and anomalous Zeeman effect, Paschen Back effect, Stark effect.

Module II

Rotational spectra of diatomic molecules as a rigid rotor and non rigid rotor, intensity of rotational lines, Diatomic molecule as a simple harmonic oscillator, vibrational energy of diatomic molecule, Anharmonicity, Vibrational-rotational spectra, Raman effect, quantum theory of Raman effect, rotational Raman spectra, vibrational Raman spectra .

Module III

Electronic band spectra, electronic energy and total energy, vibrational structure of electronic transitions, rotational structure of electronic bands, The branches(P,Q,R) of band, Band head formation. Intensities in electronic bands, Frank-Condon principle, Fortrat diagram.

Module IV

Interaction of atoms in the formation of molecules, covalent, ionic bonding and vander Waal's interactions, concept of molecular potential, Born-oppenheimer approximation, Electronic states of diatomic molecules, Electronic angular momenta, The LCAO approach, states for hydrogen molecular ion, Coulomb, exchange, overlap integral, symmetries of electronic wave functions. Term symbols for simple molecules.

INTEGRATED PHYSICS LAB-II

Course Code: PHY4212

Credit Units: 03

List of Experiment (Any Eight)

1. Measurement of vacuum using the Pirani/thermocouple gauge.
2. Measurement of lattice parameters and indexing of powder patterns.
3. Determination grain size of the alloy by optical microscope.
4. Calculation of the optical band gap of the semiconductor by absorption spectroscopy.
5. Calculation of the grain size and strain in the samples from the XRD pattern data.
6. Production and measurement of high pressure.
7. To study temperature-dependence of conductivity of a given semiconductor crystal using four probe method.
8. To determine the Hall coefficient for a given semi-conductor.
9. To determine dipole moment of an organic molecule.
10. To study the lattice dynamics using LC analog kit.
11. To study the characteristic of J-H curve using ferromagnetic standards.
12. To determine the velocity of ultrasonic waves using interferometer as a function of temperature.
13. Temperature dependence of a ceramic capacitor - Verification of Curie-Weiss law for the electrical susceptibility of a ferroelectric material.
14. Tracking of the Ferromagnetic-paramagnetic transition in Nickel through electrical resistivity.
15. To study the characteristics of a PN junction with varying temperature & the capacitance of the junction.
16. (i) Study of the characteristics of klystron tube and to determine its electronic tuning range;(ii) To determine the standing wave ratio and reflection coefficient; (iii) To determine the frequency & wavelength in a rectangular waveguide working on TE₁₀ mode; (iv) To study the square law behavior of a microwave crystal detector.
17. To determine the specific charge (e/m) of an electron.
18. To determine the charge of an electron using Millikan oil drop experiment.
19. To determine the emission spectra of hydrogen atom.
20. To study the Kerr effect using Nitrobenzene

NUCLEAR AND PARTICLE PHYSICS

Course Code: PHY4321

Credit Units: 04

Course Objective: The aim of the course is to introduce the concept of nuclear structure, nuclear forces and nuclear reactions for a clear understanding of recent intricate theories of nuclear physics. Course Contents:

Course Contents:

Module-I:

Nuclear Properties and Radioactivity Nuclear radii and measurements, nuclear binding energy (review), Radioactive decays : Review of barrier penetration of alpha decay & Geiger-Nuttall law. Beta decays, Fermi theory, Kurie plots and comparative half-lives, Allowed and forbidden transitions, Experimental evidence for Parity-violation in beta decay, Electron capture probabilities, Double beta decay, Neutrino, detection of neutrinos, measurement of the neutrino helicity. Multipolarity of gamma transitions, internal conversion process, transition rates, Production of nuclear orientation, angular distribution of gamma rays from oriented nuclei.

Module-II:

Two-Body Problems and Nuclear Forces Properties of deuteron, Schrödinger equation for the deuteron and the ground state; rms radius, spin dependence of nuclear forces, electromagnetic moment of deuteron and the necessity of tensor forces. Nucleon-nucleon scattering, experimental n-p scattering data, partial wave analysis of n-p scattering, phase shifts, singlet and triplet potentials, effective range theory, low energy p-p scattering, meson theory of nuclear forces, Charge independence and charge symmetry; spin dependence, S-wave effective range theory; central and tensor forces, dipole and quadruple moments of deuteron.

Module-III:

Nuclear Reactions Compound nucleus and Direct reactions (elastic, inelastic, transfer, break-up), Nuclear fusion, Laser induced fusion, Quantum mechanical theory, Resonance scattering and reactions, Dispersion relation, Nuclear fission: experimental features, spontaneous fission, barrier penetration, statistical model.

Module-IV: Nuclear Structure and Elementary Particle Physics 15 Liquid drop model, Shell model (extreme single particle), magnetic moment, quadruple moment; Collective models; concept of unified model Elementary particles, Various quantum numbers and their conservation, Gellmann Nishijima formula, C, P and T invariance, applications of symmetry arguments to particle reactions.

LASER PHYSICS

Course Code: PHY4322

Credit Units: 03

Catalog Description

This course is intended to give knowledge of basic principle of working of lasers, types of lasers and applications.

Course Objective:

1. To develop understanding of construction and operation of different Laser systems.
2. To understand advances in laser physics and its applications

Course outcome

Through this course students will learn following:

- 1) Fundamental principles of stimulated emission and how to convert it into coherent light emission, types of lasers
- 2) The manipulation of light e.g. mode selection, non linear optics.
- 3) Applications of various lasers in various fields including scientific research.

Course Contents:

Module I: Basics of Lasers

Stimulated Absorption, Stimulated Emission and spontaneous Emission, Einstein Coefficients, Light Amplification and Threshold condition, Widths and Profiles of Spectral Lines: Homogeneous and Inhomogeneous Broadening. Natural Linewidth. Doppler Width. Collision Broadening of Spectral Lines.

Module II

Basic principles of LASERS Laser Amplification. Laser Oscillation. Optical and Electrical Pumping. Optical Resonators. Losses in Resonators. Resonance Frequencies of Optical Resonators. Laser Modes. Rate Equations for Three-Level and Four- Level Lasers, Single-Mode Operation: Q-Switching, Mode Locking, Basic ideas of chirped pulse amplification

Module III

Types of Lasers. Solid State lasers (Ruby laser, Semiconductor laser, Nd: YAG laser), Gas lasers (He-Ne laser, Excimer laser), Liquid (organic dye) lasers.

Module IV

Nonlinear Optics, Harmonic Generation, Phase matching, Third Harmonic generation, Parametric oscillator, Applications of lasers: Holography, Basic idea of Mach-Zehnder Interferometer and Laser induced Fluorescence

Examination Scheme:

INTEGRATED PHYSICS LAB-III

Course Code: PHY4316

Credit Units: 03

Course Contents:

1. Fabrication of thermocouple and calibration of the same for the temperature measurement.
2. Production and characterization of plasma.
3. Determination of the transition temperature of the materials undergoing phase transition and calculation of the transition enthalpy.
4. Determination of Young's modulus of steel by flexural vibrations of a bar.
5. To measure numerical aperture and propagation loss and bending losses for optical fibre as function of bending angle and at various wavelengths.
6. To determine wavelength of a given laser source.
7. To determine the Diameter, Divergence and Focus Spot Size of a Laser Beam.
8. To measure the degree of polarization using laser.
9. To study Propagation loss & bending loss using Optical Fiber
10. To study the characteristics of LED & Detector using Fiber Optic.
11. To determine the numerical aperture of a given optical fiber.
12. To study the frequency modulation & demodulation by using Fiber Optic Link.
13. To determine the Planck's constant using photocell
14. To determine the mean wavelength of sodium light and to measure the wavelength difference ($\Delta\lambda$) using Michelson interferometer
15. To study the spectral characteristics of the incident beam using Fabry Perot Interferometer
16. To find the intensity distribution of single, double and multiple slit by using Fraunhofer diffraction pattern
17. To measure the grating element of grating by Fraunhofer diffraction pattern.
18. To determine the thickness of a thin transparent sheet using Michelson Interferometer.
19. To verify the Fresnel's formula for reflection and refraction by using a plane refracting surface using Spectrometer.
20. To determine the effect of magnetic field on the polarization state in dispersive medium (Faraday Experiment).

SUMMER INTERNSHIP EVALUATION

Course Code: PHY4335

Credit Units: 03

Methodology:

Practical training is based on the theoretical subjects studied by students. It can be arranged within the college or any in any related industrial unit or in any research lab. The students are to learn various industrial, technical and administrative processes followed in the industry/research. In case of on campus training the students will be given specific tasks of synthesizing /testing/analysis/characterization. On completion of the practical training the students are to present a report covering various aspects learnt by them and give a presentation of the same.

Examination Scheme

Feedback from Industry:	20
Training Report:	40
Viva:	15
Presentation:	25

DIGITAL ELECTRONICS AND MICROPROCESSORS

Course Code: PHY4306

Credit Units: 03

Course Objectives

The objective of this course is to

- To provide a detailed description of registers and counters, A/D and D/A converters, microprocessors and antenna action.
- To serve as the foundation for practical lab experiments.

Course Outcomes

On completion of this course, the students will be able to

CO1 Develop an understanding of the basic concepts of digital electronics- Boolean algebra and applications of logic gates.

CO2 Clearly define and explain different types of the flip-flops, registers and counters

CO3 Enumerate and explain the Analog-to-digital and Digital-to Analog Converters.

CO4 Explain the basics of the Microprocessor 8085 and 8086

Catalog Description

This course gives a comprehensive view of the digital electronics and its applications. It covers the basic idea of a microprocessor. The working principle and operation of the different types of logic gates, flip-flops, registers and counters, A/D and D/A converters will be studied in detail.

Course Contents:

Module I: Shift Registers and Counters

10 Lectures

Universal Shift Register, shift counter, Ring Counter, D/A converter and A/D converter. Simultaneous and Counter method of A/D converter, Successive Approximation method, Seven segment LED display, BCD to seven segment decoder.

Logic Families: Transistor as a Switch, TTL integrated circuits, CMOS integrated circuit. Logic families and their characteristics, comparing Logic families, Interfacing. Introduction to VHDL and Programming techniques.

Module II: Introduction to Microprocessor

6 Lectures

Microprocessor 8085: PIN Out and Signals, Internal architecture, Flags, Program counter. Introduction to 8085 Instruction Set: Data Transfer, Arithmetic & Logical Instruction, Branch and machine Code, OP-Code Format, Addressing Mode Timing Diagram. Machine Cycle.

Module III: Microprocessor: - Programming and Interfacing

10 Lectures

Subroutine and Sub programming, CALL and RETURN, STACK, PUSH & POP, 8085 Interrupts, RST Code; SID, SOD, RIM and SIM; Delay Program Calculation, Memory Organization. (RAM, EPROM, ROM, PROM, DRAM.) Introduction to 8086 and registers. Addressing and Interfacing, Basic Interfacing Concept, Introduction to I/O and Memory Mapped Techniques, Handshaking, Interfacing I/O devices, Display, Keyboard, Generating Control Signals, De Multiplexing of address Bus, Programming Technique, Interfacing 8155, Programmable I/O Ports and Timer IC, Programmable Peripheral Interface 8255 with 8085. Interfacing of A/D and D/A converters, Study of 8279, 8253.

Module IV: Antennas

10 Lectures

Antenna Action, Short Electric Doublet, Radiation from a Current Element, Thin Linear Antenna, Effect of Ground: Image Antenna, Short Vertical Grounded Antenna, Total Effective resistance and Efficiency of an Antenna, Yagi Antenna, Loop Antenna, Parabolic Reflectors, Antenna measurements, Broadband antenna principles, Practical Transmitting Antennas, Receiving Antennas, Difference in Receiving and Transmitting Antennas.

Modes of Evaluation: Quiz/Assignment/ Seminar/Written Examination

RENEWABLE ENERGY RESOURCES

Course Code: PHY4317

Credit Units: 03

Course Objective:

This is an introductory course to renewable energy technologies and potentials to the Science students aiming to explain basic concepts of Renewable Energy resources.

Course Contents:

Module I: Energy & Thermodynamics & Environmental impact

Heat Transfer in Renewable Energy Systems - conduction, convection and radiation, thermal aspects of energy generation Work, heat, and the first law of thermodynamics. Heat engines and the second law of thermodynamics. The Carnot cycle. Applications of the second law to various energy transformation processes: heat pumps and refrigerators; different engine cycles. Use of fossil fuel, Energy crisis, Global Warming, Carbon emission and climate change. Need for sustainable development and Renewable Energy

Module II: Solar Energy (Thermal and Photovoltaic)

Solar energy option, Environmental impact of solar power, physics of the sun, Thermonuclear reactions, Black body radiation, Spectral distribution, the solar constant, radiation on tilted surface / earth, Solar thermal Energy, Application of solar energy in Solar thermal and solar photovoltaic system, Brief introduction to 3 generation of Solar cells,

Module III: Ocean, tidal, wave energy

Principle of ocean thermal energy conversion (OTEC), setting of OTEC plants, thermodynamic cycles. Tidal and wave energy: Fundamentals of tidal power, Potential and conversion techniques, mini-hydel power plants. Use of tidal energy, Limitations of tidal energy conversion systems.

Module IV: Geothermal and Wind Energy

Structure of earth's interior, earthquakes & volcanoes, Geothermal resources, Hot springs, Steam ejection, Principal of working, Types of geothermal station with schematic representation, Applications.

Properties of wind, Availability of wind energy in India, wind velocity, Wind machine fundamentals; types of wind machines and their characteristics, Horizontal and Vertical axis wind mills, Elementary design principles, Coefficient of performance of a wind mill rotor, Aerodynamic considerations in wind mill design, Recent development and applications

Module V: Hydrogen Energy and Bio-Gas

Properties of hydrogen in respect of its use as source of renewable energy, Sources of hydrogen, Production of hydrogen; electrolysis of water, thermal decomposition of water, thermo chemical production bio-chemical production. Storage Issues of Hydrogen, Applications of hydrogen energy.

Biomass: Raw materials, Properties/ characteristics of bio gas, Principles of Bio-Conversion; Photosynthesis, Anaerobic/aerobic digestion, types of Bio-gas digesters, gas yield, combustion, Transportation of bio gas, bio gas plant technology & status, Biomass cogeneration Energy recovery from urban waste, Power generation from liquid waste, Bio gas applications.

INTRODUCTION TO ASTROPHYSICS

Course Code: PHY4318

Credit Units: 03

Course Objective: To develop an understanding and appreciation of the laws of the Universe. A survey of modern astronomy covering topics about the solar system, galaxies, evolution of stars and methods used to explore the Universe.

Course Contents:

Module-I: Spectrum of EM radiation, and observation in different wavelength bands, atmospheric window. Different types of telescope, Limit of Resolution and resolving power. Overview of major contents of universe, Black body radiation, specific intensity, flux density, luminosity, Apparent and absolute magnitudes, Bolometric magnitude, Basics of radiative transfer (Emission/absorption coefficients, source functions).

Module-II: Sun as a star: Basic parameters e.g. Solar constant, luminosity, effective temperature, mass, density etc.; Hydrostatic equilibrium, central temperature and pressure at centre of the Sun. Source of energy in the stars: Kelvin-Helmholtz timescale; possibility of thermonuclear reactions.

Module-III: Solar System: Various components of the solar system, Planets, their satellites, atmosphere at different planets, formation of the solar system. The Galaxy: Size and shape of the Milky Way; interstellar extinction and reddening (qualitative); different types of Nebulae; orbits of stars and epicycle theory; stellar populations.

Module-IV: Morphological classification of galaxies; rotation curve and idea of dark matter; Active galaxies (basic understanding); clusters of galaxies and large scale distribution. Expansion of the universe; Hubble law and Hubble constant; Big-bang picture and Cosmic microwave background radiation (qualitative discussion).

EXPERIMENTAL TECHNIQUES

Course Code: PHY4410

Credit Units: 04

Course Objective: The objective of the present course is to introduce some advanced measurement, characterization and analytical methods commonly used in experimental physics research to the post graduate students.

Course Contents:

Module I: Vacuum Techniques: Basics: Introduction to vacuum technique, units, ranges, review of Kinetic theory of gases, Physical parameters at low pressures, Throughput, different vacuum pumps for production of low, medium, high and ultra- high vacuum. Vacuum gauges (McLeod, Knudsen, Pirani, Penning and Ionization gauges), Leak detection, Industrial & Scientific applications.

Module II: Diffraction and Microscopic Techniques: X-Ray diffraction, Electron diffraction, neutron diffraction, Transmission electron microscope (TEM), Scanning electron microscope (SEM), Energy dispersive X-ray analysis techniques (EDX). Atomic Force microscope (AFM), Surface Tunnelling microscopy (STM).

Module III: Spectroscopy & Thermal Techniques UV-VIS spectroscopy, photoluminescence, Infra-red spectroscopy, Raman spectroscopy, Photoelectron spectroscopy (XPS, UPS, AES). Thermal Techniques: TG, DTA, DSC. Scanning Thermal Microscopy (SThM)

Module IV: Accelerators & Detectors Van deGraff Accelerator, Tandem Accelerator, Linear Accelerator (LINAC), Cyclotron, Betatron, Synchrocyclotron, Synchrotron. Detailed study of Ionization chamber; Proportional counter, GM counter, Scintillation detector, photomultiplier tubes, photodiode, semiconductor diode detector.

NANO-SCIENCE AND TECHNOLOGY

Course Code: PHY4404

Credit Units: 03

Course Objective:

The objective of the present course is to introduce Nanoscience and nanotechnology. The course also provides the fundamentals of Nanoscience & nanotechnology and some of its applications. The course further provides the introduction of some of the Synthesis and characterization techniques.

Course Contents:

Module-I: Physics of Low-dimensional Materials -

Nano-materials and their types, Top down and bottom up approach. 1D, 2D and 0D confinement and Concept of quantum dots, quantum wires and quantum wells; Density of states for bulk materials, quantum wells, wires and dots; Importance of size distribution control, size measurement and size selection .

Module-II: Synthesis of Nanomaterials

Chemical methods: Sol-gel/Combustion method, Solvothermal, Chemical bath deposition Chemical vapour deposition, Homo- and hetero-nucleation growth methods, Co-precipitation method, Citrate precursor method. Sputtering and types: RF sputtering, DC sputtering and Magnetron sputtering. Thermal Evaporation, e-beam evaporation, Pulse Laser Ablation (PLD)

Module-III: Properties and Applications of Nanomaterials Physical and Mechanical properties of nanomaterials, Optical Properties, Electronic properties, Magnetic Properties, Electro-magnetic properties

Module-IV: Applications of Nanomaterials

Applications of carbon based nanostructured materials: CNT, Graphene and Fullerenes, Defense application, Medical Application, Mechanical Applications. Applications in communication, Water purification and Agriculture applications.

ATMOSPHERIC PHYSICS

Course Code: PHY4405

Credit Units: 03

Course Objectives:

Several fundamental aspects related to Physics, Thermodynamics and Chemistry of the Atmosphere and Oceans will be introduced to the students in order to make them understand, and apply the knowledge to the physico-chemical processes that influence the weather and climate.

Course Contents:

Module-I: Thermodynamics

Thermodynamics of dry and moist air, atmospheric stability and dry adiabatic lapse rate, moist processes in the atmosphere, saturated and unsaturated ascent, moist adiabatic and saturated adiabatic processes in the atmosphere, saturated adiabatic lapse rate, pseudo adiabatic processes and equivalent potential temperature, conditional instability second kind, moist convection, aerosols, condensation processes, formation of cloud droplets, precipitation.

Module-II: Ocean Morphology

Ocean physics, thermodynamics of sea water, observed temperature, salinity, and density in the ocean, density stratification, water mass distribution, coastal currents and upwelling, thermohaline circulation. Oceans currents, coupling of surface and deep ocean waters, basic foundation of turbulence, turbulent flows, turbulent vorticity, turbulence pressure, eddy diffusivity, coherent structures, surface fluxes, air-sea interaction, mixing processes in the ocean.

Module-III: Earth-Atmosphere Radiation Balance

Radiative transfer in atmosphere and ocean: Sun and climate, Planck function, black-body radiation, local thermodynamic equilibrium, radiometric quantities, absorption and emission, Schwarzschild's equation, radiative equilibrium in a grey atmosphere, balance between incoming solar and outgoing

thermal radiation, role of aerosols, absorption by atmospheric gases, heating rates, net radiative heating, Radiative transfer in atmosphere-ocean system.

GENERAL RELATIVITY & COSMOLOGY

Course Code: PHY4406

Credit Units: 03

Course Objective:

This subject aims to provide an introduction to cosmology, including the physics of the early Universe, dark matter and dark energy, and the evolution of the observed large-scale structure.

Course Contents:

Module-I

Newtonian Cosmology, Einstein's universe, Cosmological Principle, Olbers' paradox, Hubble's observations and Expansion of the Universe, Cosmological redshift, Einstein equation for cosmology, Friedman models.

Module-II

Angular diameter distance and luminosity distance as cosmological tools, cosmological models with \ddot{a} term, Radiation dominated and matter dominated solutions. Thermal history of the Universe, radiation dominated universe, Big-bang nucleosynthesis, recombination, decoupling of matter and radiation, Horizon problem, flatness problem, introduction to inflation.

Module-III

Formation of large scale structures: Density fluctuations, Jeans mass in expanding universe, evidence of dark matter, growth of fluctuations, Dark matter candidates. Alternative to Friedman cosmology, Mach's principle, introduction to Brans-Dicke theory

Module-IV

Measurement of Hubble constant, various methods (e.g. Cepheid stars, Tully-Fisher relation, SNIa, Surface brightness fluctuations, Fundamental Plane relation) and recent results. Cosmic microwave background, spectrum and anisotropy, power spectrum of fluctuations, Sunyaev-Zel'dovich effect in galaxy clusters. Latest observations of SNe Ia and evidence of dark energy, Matter-energy of the Universe.

OPTICAL FIBERS AND COMMUNICATION

Course Code: PHY4407

Credit Units: 03

Course Objective:

The objective of the present course is to introduce fundamentals of optical fibers, detectors and amplifiers and their applications in Physics.

Course Contents:

Module-I: Optical Fiber Fundamentals

Light propagation in optical fiber, Acceptance angle and numerical aperture, Losses in optical fiber: absorption loss scattering loss, bending loss, and splice loss. Pulse propagation in dispersive medium, pulse broadening, Intermodal and intramodal dispersion, group velocity dispersion (material and waveguide).

Module-II: Modal Analysis of step index multimode and graded index fiber

Characteristics equation of step index multimode fiber, Transverse Electric (TE), Transverse magnetic (TM) and Hybrid modes, linearly polarized modes, V parameter, mode cutoff, Mode field diameter, Modal analysis of graded index fiber.

Module-III: Optical Sources, Detectors and Amplifiers

Types of Optical Sources, Light emitting diodes (LED), Edge emitting LEDs, Coupling of LEDs with fibers, Semiconductor Lasers; Detectors: Photoconductors, Photodiodes, Avalanche Photodiodes and Phototransistors, Amplifiers: Semiconductor Laser Amplifiers, characteristics, advantages and drawback, Erbium Doped Fiber Amplifier (EDFA), gain and noise in EDFA and noise figure.

Module-IV: Fiber Optical Communication Components and System

Coupling Components- couplers, connectors and splices, Modulators and Modulation methods, Transmitters, Receivers, Repeaters and switches; Transmitter, Receiver and link design, Line codes for optical fiber links, wavelength division multiplexing (WDM) and Optical Division Multiplexing.

Examination Scheme:

PHYSICS OF SOLAR PHOTOVOLTAICS

Course Code: PHY4408

Credit Units: 03

Course Objective:

In this course, one would learn about the fundamentals of photoelectric conversion: charge excitation, conduction, separation, and collection. You will become familiar with commercial and emerging photovoltaic (PV) technologies and various cross-cutting themes in PV: conversion efficiencies, loss mechanisms, characterization, manufacturing, systems, reliability, life-cycle analysis, and risk analysis

Course Contents:

Module I: Solar Cells and Sunlight

Outline of solar cell development, physical source of sunlight, review of solar intensity at the Earth's surface, solar insolation data

Module II: Review of Semiconductor Properties

Crystal structures and orientations, forbidden energy gaps, dynamics of electrons and holes, carrier density, carrier transport, generation and recombination of carriers due to light, direct and indirect band gap semiconductors, basic device physics, p-n junction diode,

Module III: Standard Silicon Solar Cell Technology (1st generation solar cells)

Photovoltaic effect, solar cell output parameters, characteristic lifetime, diffusion length, diffusion coefficient, absorption coefficient, efficiency limits, losses, and measurements. Review of fabrication technology, polysilicon and single crystal silicon cell technologies. Design of Solar Cells, Solar cells to solar module

Module IV: Thin Film Solar cells (2nd – Generation)

Polysilicon silicon, amorphous silicon, gallium arsenide solar cells, copper sulfide and cadmium sulfide solar cells, potential & drawbacks of currently manufactured technologies (single- and multicrystalline silicon, CdTe, CIGS, CPV)

Module V: Emerging Solar Cells technologies and concepts (3rd –Generation)

Organic solar cells, Dye-sensitized solar cells, Perovskite solar cells, GaAs solar cells, Thermo-photovoltaic approaches to overcome single junction efficiency limits, spectrum modification approaches, hot carrier solar cells, Quantum Dot solar cells

Examination Scheme:

BIOPHYSICS

Course Code: PHY4409

Credit Units: 03

Course Objective:

This course aims at exposing the students to basic Biophysics concepts which will be useful for them to solve the integrated problems of Biology and Physics.

Course Contents:

Module I: General Biophysics and Techniques in Biophysics

Fundamentals of Biophysics, Surface tension, Adsorption, Osmosis, Osmotic pressure, Dialysis, Colloids, Colloidal systems of life, Buffer, Buffer capacity, Buffers in life system, pH, its importance, Basics of spectroscopy, X-ray crystallography, NMR, UV etc

Module II: Molecular Biophysics

Different levels of protein structure, Primary, secondary, tertiary and quaternary structure. Main chain and side chain torsion angles, Alpha helix, beta sheet, turns. Ramachandran plot, Allowed conformations for a pair of linked peptide units, Motifs and domains.

Module III: Thermodynamics

Laws of thermodynamics, concept of free energy, unavailable energy and entropy, heat content of food, bomb calorimetry, chemical kinetics – rate, order, molecularity of reactions and energy of activation

Module IV: Simulations, Data Analysis and Visualization

Advantages and challenges in simulations of Biophysics, Basics of simulation software such as NAMD and/or GROMACS, Data Analysis of simulation generated data, Visualization software such as PyMol and VMD

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE

RADIATION PHYSICS

Course Code: PHY4411

Credit Units: 03

Course Objective:

The objective of the course on Radiation Physics is to expose the students to the concepts of different kinds of radiations, their interaction with matter, radiation detection and radiation dosimetry. The course will enable students to understand that interaction of matter with different kinds of radiations such as charged particles, electrons, neutrons, EM waves etc. and further their technological applications primarily as radiological applications.

Course Contents:

Module I: Radiation Sources

Basic units and definitions, Fast electron sources: beta decay, internal conversion & Auger electrons; Heavy charged particle sources: Alpha decay & spontaneous fission; Sources of electromagnetic radiation: Gamma rays following beta decay, Annihilation radiation, Bremsstrahlung, Characteristic X-rays & Synchrotron radiations; Neutron sources: Radioisotope sources & photoneutron sources

Module II: Radiation Interaction

Interaction of heavy charged particles: Nature of interaction, stopping power, energy loss characteristics, The Bragg curve, Energy straggling, Range & Range straggling, Energy loss in thin absorbers; Interaction of fast electrons: Specific energy loss, Electron range and transmission curves, Interaction of gamma rays: Photoelectric absorption, Compton scattering, Pair production; Interaction of neutrons: Slow neutron & fast neutron interaction; Radiation exposure and dose: Gamma ray exposures, Absorbed Dose, Dose equivalent,

Module III: Radiation Detectors and Spectroscopy:

General characteristics of detectors: Detector model, Modes of detector operation, Energy resolution, Detector efficiency; Gas filled detectors, Organic and inorganic scintillation detectors, Semiconductor detectors [Si(Li), Ge(Li) HPGe]. Photomultiplier tubes, Gamma ray spectrometers, Gamma ray spectrometry with NaI(Tl) scintillation and semiconductor detectors; Background and detector shielding.

Module IV: Radiation Dosimetry

Radiation dosimetry, its types and applications: Environmental, space, personal and medical dosimetry; General properties of dosimeter; Thermoluminescence (TL) and its mechanism; TL dosimetry: TL glow curve and TL spectra; Concept of trapping parameters: activation energy, order of kinetics & frequency factor; TLD protocols, optically stimulated luminescence (OSL) based dosimetry

Examination Scheme:

Components	A	CT	S/V/Q	H	E

HIGH ENERGY PHYSICS

Course Code: PHY4413

Credit Units: 03

Course Objective:

The aim of the course is to introduce the basic concepts of elementary particle physics and quantum field theory for a clear understanding of the universe at very fundamental level. Further, the students will be able to gain knowledge of the important concepts which are used in modern day particle physics experiments.

Course Contents:

Module I: Basic Concepts

Natural units, Cosmological origin of universe, Fundamental building blocks and interactions, Historical introduction to particle zoo, Cross section, Decay rate, Pseudo-rapidity, Discrete and Continuous Symmetries, Isospin, Strangeness, Hypercharge, Parity, Meson and Baryon Octet, Baryon Decuplet, Eight-fold way, Charge Conjugation, Time Reversal, CP symmetry, CPT theorem, Feynman diagrams, Collider physics, Integrated Luminosity, Hybrid detectors.

Module II: Standard Model of Particle Physics

Gauge theory, Local and global symmetry, Spontaneous breaking of symmetry, Abelian and Non-Abelian gauge fields, Goldstone theorem, Higgs mechanism, Higgs field and coupling to three generations of matter, Gauge boson and fermion mass generation via spontaneous symmetry breaking, Elementary idea of CKM matrix, Basic introduction of Glashow-Weinberg-Salam theory.

Module III: QCD and Quark Model

Deep inelastic scattering, Quark model, Asymptotic freedom, Color confinement, Hadron formation, Flavor symmetry.

Module IV: Basic Idea of Beyond Standard Model Physics

Neutrino – types, oscillation and mass, Elementary idea of Supersymmetry & String theory, Dark matter & Dark Energy, New Physics.

Examination Scheme:

BCH4102	BIOSTATISTICS	L	T	P	C
Version 1.1	Date of Approval: 7 th December, 2021	1	1	0	2
Pre-requisites/Exposure	Basic concept of Biostatistics				
Co-requisites					

Course Description

This course will make use of case studies to discuss problems and applications of biostatistics. It also includes statistical methods and principles necessary for understanding and interpreting data used in Biochemistry research. Topics include descriptive statistics, graphical data summary, sampling, statistical comparison of groups, correlation, and regression

Course Objectives

The objective of this course is to

1. Provide the students basic understanding of statistical methods
2. Provide the students basic introductory concepts of bioinformatics.

Course Outcomes

On completion of this course, the students will be able to

CO1. Identify the basics and application of biostatistics and bioinformatics in biochemical research.

CO2. Analyze the significances of Q Test, F Test and T Test

CO3. Describe the Concept of measures of central Tendency.

CO4. Review the basics of Regression Analysis

Course Content

Modules	Blooms level*	Number of hours
Module-I: Biostatistics I Principles and practice of statistical methods in biological research, samples and populations, measures of central tendency; mean, median mode; standard deviations and standard error, measures of dispersion: correlation and regression, sampling theory, Coefficient of variation, standard deviation; Range and interquartile range; Grouped mean and grouped variance; Frequency distributions; One way ANOVA; Two-way ANOVA; AMOVA; student's t test, Q Test, FTest	L1, L2, L3	9
Module-II: Biostatistics II Pearsonian chi square Basic idea of probability, probability distributions, binomial, Poisson, normal Statistical quality control, Chi Square Test – Observed and expected frequencies, Calculating p values, assumptions of a chi square goodness of fit Correlation –Two-way scatter plot, Pearson's correlation coefficient; Regression – regression concepts, simple linear regression; Calculation of R ² and p.	L2, L3, L4	9

BCH4106	INSTRUMENTATION TECHNIQUES	L	T	P	C
Version 1.1	Date of Approval: 7 th December, 2021	2	1	0	3
Pre-requisites/Exposure	Basic concepts of Basic instrumentation techniques				
Co-requisites					

Course Description

Biochemical studies rely on the availability of appropriate analytical techniques and their applications. This course deals with the different biochemical techniques such as spectrophotometry, Mass spectrometry, Microscopy and chromatography to gain knowledge on the biomolecule such as proteins, lipids, carbohydrates, nucleic acids and their function.

Course Objectives

The objective of this course is to

1. Provide students with an insight into the basic instrumentation techniques used in biochemical research
2. Make them familiarize with cutting edge experimental techniques.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Identify the range and theories of instrumental methods available in analytical chemistry.
CO2. Describe the appropriate selection of instruments for the successful analysis of complex mixtures.
CO3. Predict the role of a biochemist in measurement and problem solving in biochemical analysis.
CO4. Analyze the requirements for advanced methods of separation and analysis.

Course Contents:

Modules	Blooms level*	Number of hours
MODULE-I: Microscopy Principle of light microscopy, phase contrast microscopy, fluorescence microscopy, scanning electron microscopy, transmission electron microscopy, Confocal microscopy, Cryo-electron microscopy Chromatographic techniques	L1, L2, L3	8
MODULE-II: Chromatography and Centrifugation Preparation of sample, different methods of cell lysis, salting out, dialysis. Introduction to chromatography. Different modes of chromatography: paper, thin layer and column. Preparative and analytical applications. Principles and applications of: Paper Chromatography, Thin Layer Chromatography, Ion Exchange Chromatography, Hydrophobic interaction chromatography Molecular Sieve Chromatography, Affinity Chromatography, reverse phase chromatography. Principle of centrifugation, basic rules of sedimentation, sedimentation coefficient. Various types of centrifuges, low speed centrifuge, high speed centrifuge and ultracentrifuge, types of rotors. Application of centrifugation, differential centrifugation, density gradient centrifugation- zonal and isopycnic.	L2, L3	8

MODULE-III: Spectroscopy Electromagnetic radiation, interaction of radiation with biomolecules, principle of UV-visible absorption spectrophotometry, Lambert's Law, Beer's Law, working of a spectrophotometer. Applications of UV-visible absorption spectrophotometry in biochemistry. Fluorescence spectrophotometry: Phenomena of fluorescence, intrinsic and extrinsic fluorescence, applications of fluorescence in biochemistry. Circular Dichroism, FTIR, ITC, TGA, DSC.	L2, L3, L4	8
MODULE-IV: Mass spectrometry & advanced fluorescence techniques Mass spectrometry; m/z ratio, McLafferty rearrangement, characteristic spectra of some simple organic molecules, Time of Flight (TOF), MS-MS, ESI-MS, MALDI, GCMS and LCMS. Fluorescence correlation spectroscopy (FCS), FRAP, FACS, FRET Techniques.	L2, L3, L4	8

BCH4105	BIOCHEMISTRY LAB	L	T	P	C
Version 1.1	Date of Approval: 7th December, 2021	0	0	4	2
Pre-requisites/Exposure	Basic Concepts of Biochemistry lab				
Co-requisites					

Course Description

This course deals with organic preparation and biomolecules quantification. This curriculum provides students with practical knowledge and hands-on experience with some of the most common experimental methods used in biochemical and molecular biological research. The main objectives of this course are: To make students familiar with methods and instruments used in biochemistry laboratories, relate these basic biochemistry skills to a chosen field of interest, learn how to collect, record and analyze experimental data, present results clearly in graphic, tabular, and written formats, and perform experiments.

Course Objectives

The objective of this course is to

1. Help students learn bioorganic preparations and analysis.
2. Make students learn basic biochemistry experiments.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Describe and perform bioorganic analysis.
 CO2. Demonstrate the theory and experiments of analytical biochemistry.
 CO3. Analyze use of fractionation and quantification of proteins.
 CO4. Outline isolation of proteins from different sources.

Course Content

BCH4107	BIOCHEMICAL ENGINEERING LAB	L	T	P	C
Version 1.1	Date of Approval: 7th December, 2021	0	0	4	2
Pre-requisites/Exposure	Basic concepts of fundamental Chemistry and Biology				
Co-requisites					

Course Description

Biochemical Engineering laboratory provide learning with research and many opportunities for innovative, practical training. Our state-of-the-art labs give our students the resources to conduct research in areas including fermentation, distillation, process engineering, biomedical engineering, quantification of production, enzyme purification, immobilization and biotechnology.

Course Objectives

The objective of this course is to

1. Help students learn bioorganic preparations and analysis.
2. Make students learn basic biochemistry experiments.

Course Outcomes

On completion of this course, the students will be able to

- CO1.Describethe techniques used in food, feed, and pharmaceutical industries.
CO2.Analyze requirements of some of the modern biotechnology experiments.
CO3. Outline the requirements of industry requirements.

Course Contents

(A minimum number of 10 experiments must be performed)

BCH4108	RESEARCH SEMINAR	L	T	P	C
Version 1.1	Date of Approval: 7 th December, 2021	0	0	0	1
Pre-requisites/Exposure	Graduate standing in chemistry/ biochemistry/ Forensic Sciences on consent of instructor				
Co-requisites					

Course Description

This course is for first-year students and is a one-credit seminar to introduce students to the major research aspects of Biochemistry. They can learn about planning their courses and doing research, find out what other majors are doing, meet some of the faculty, and learn strategies for being successful.

Course Objectives

1. To help students get accustomed to requirements of scientific presentation.
2. To improve student's confidence of demonstration power.

Course Outcomes

On completion of this course, the students will be able to

CO1. Recognizes a one to one and hands on experience on any aspect of their learning for research based activity.

CO2. Describe details of departmental research (This one will be running through out first semesters on every Monday any Lecture, where normally Ph.D. students /internal Faculties /external speakers will give talk on their research or other topic of their specialization).

CO3. Outline the basics of scientific presentation.

Course Contents

BCH4109	BIOCHEMISTRY OF PROTEINS AND ENZYMES	L	T	P	C
Version 1.1	Date of Approval: 7 th December, 2021	0	0	0	1
Pre-requisites/Exposure	Graduate standing in chemistry/ biochemistry/ Forensic Sciences on consent of instructor				
Co-requisites					

Course Description:

The course deals with the basic concepts of Protein and enzyme biochemistry. This course will provide students with knowledge of the fundamentals of enzyme kinetics and conceptual understanding of proteins.

Course Objectives

The objective of this course is to

1. Help students learn basics of proteins and enzymes.
2. Make students understand the basics of protein biochemistry

On completion of this course, the students will be able to

- CO1. Analyze the concepts of enzyme kinetics.
 CO2. Explain the basic aspects related to protein biochemistry.
 CO2. Predict the basics of protein folding concepts
 CO4. Assess the requirements of protein purification.

Course Content

Modules	Blooms level*	Number of hours
Module-I: Introduction to amino acids, peptides and proteins Amino acids and their properties - hydrophobic, polar and charged. Physical properties, optical properties (Stereoisomerism); Chemical properties (acid base properties, titration curve) of amino acids; Uncommon amino acids and their functions. Multimeric proteins, Conjugated proteins and Metallo-proteins. Diversity of peptide and protein function and their applications. Solid phase peptide synthesis. Organization of protein structure into primary, secondary, tertiary and quaternary structures. alpha-helix beta- structure, beta- helix, super secondary structure. Tertiary Structure: Forces stabilizing, unfolding/ refolding expt. Prediction of tertiary Structure. Quaternary structure – hemoglobin. Ramachandran plot. Helix coil transitions, Vander Walls, electrostatic, Hydrogen bonding, and hydrophobic interactions. Protein motif; zinc finger, leucine zipper, Solid phase peptide synthesis. N-terminal and C-terminal amino acid analysis. Sequencing techniques - Edman degradation. Generation of overlap peptides using different enzymes and chemical reagents. Disulfide bonds and their location. Forces stabilizing the protein structure - covalent and non-covalent. Importance of primary structure in protein folding. The peptide bond, dihedral angles psi and phi, helices, sheets and turns, Ramachandran map. Motifs and domains. Structures of myoglobin and hemoglobin, alpha-keratin, silk fibroin, collagen	L1, L2, L3	8
Module II: Protein folding, Conformational Diseases and Specialized proteins Denaturation and renaturation of Ribonuclease A – discovery of protein	L2, L3	6

Prof. Dr. Anil Kumar
 Deputy Dean Academics
 Amity University Haryana
 Manesar, Gurugram
 Haryana-122413

Registrar

 Manesar Gurgaon-122413

<p>folding. Introduction to thermodynamics of folding and molten globule. Assisted folding by molecular chaperones, chaperonins and PDI. Defects in protein folding. Diseases associated with misfolding – Alzheimer's and Prion based. Transport protein: Hemoglobin - Oxygen binding curves, influence of 2,3-BPG, CO₂ and H⁺, Hill plot, Cooperativity between subunits and models to explain the phenomena - concerted and sequential models. Hemoglobin disorders-sickle cell anemia, thalassemia's. Motor proteins- Actin and myosin. Defense proteins- Antibodies, Membrane proteins Integral and membrane associated proteins. Hydropathy plots to predict transmembrane domains</p>		
<p>Module-III: Extraction, purification and characterization of proteins Solubilization of proteins from their cellular and extracellular locations. Use of mechanical and chemical methods, homogenization, ultrasonication, French press and centrifugation. Ammonium sulphate fractionation, solvent fractionation, dialysis and lyophilization Ion exchange chromatography, molecular sieve chromatography, hydrophobic interaction/reverse phase chromatography, affinity chromatography, HPLC and FPLC. Determination of purity, molecular weight, extinction coefficient and sedimentation coefficient. IEF, SDS-PAGE and 2-D electrophoresis.</p>	L2, L3, L4	6
<p>Module-IV: Enzyme Kinetics Nature of enzymes - protein and non-protein (ribozyme, abzymes). Cofactor and prosthetic group, apo- and holo-enzymes. Features of enzyme catalysis. Classification of enzymes and nomenclature. Fischer's lock & key and Koshland's induced fit hypothesis. Enzyme specificity. Enzyme kinetics- Michaelis-Menten equation, Lineweaver-Burk plot. Determination of K_m, V_{max}, K_{cat}. Factors affecting enzyme activity. Enzyme inhibition-Reversible (competitive, uncompetitive, non-competitive) and irreversible inhibition.</p>	L2,L3,L4	8
<p>Module-V Mechanism of enzyme action, enzyme regulation and Bioluminescence General mechanisms of action. Acid-base and covalent catalysis (chymotrypsin, lysozyme). Metal activated enzymes and metalloenzymes. Allosteric regulation and feedback inhibition (ATCase). Reversible covalent modification (glycogen phosphorylase). Proteolytic cleavage zymogen. Multienzyme complex. Coenzymes. Isoenzymes. Applications of enzymes in research. Application of enzymes in diagnostics (SGPT, SGOT, creatine kinase), Enzyme immunoassay (HRP), Enzyme therapy Pancreatic enzymes; Trypsin, Chymotrypsin, Elastase, Protease and Protease inhibitors. Multienzyme complex: Pyruvate Dehydrogenase system, (<i>E. coli</i> and mammalian), Tryptophan synthetase, fatty acid synthetase. Clogged gutter mechanism of enzyme inhibition. Bioluminescence; History, Source of Bioluminescence material, examples of bioluminescence organism Mechanism of Bio- luminescence in specific organisms, Evolution and Bioluminescence. Use and applications of bioluminescence Unusual Bio-molecules; Prions, Fullerenes, Small Nuclear Riboproteins (SNURPNs), Lectins, Antifreeze proteins, Stress Proteins, Chaperons, Ionophores (Crown ethers, Cryptans) Biomimetic Chemistry- Mimicking of Ion Channels, Enzyme receptor carriers, antibodies, Vesicles and Sensors, Enzyme mimicking-Cram's Protease Model, Rebok's allosteric Model and Flavinophores for NAD Host-guest Chem</p>	L2,L3,L4	8

BCH4111	BIOINFORMATICS LAB	L	T	P	C
Version 1.1	Date of Approval: 7 th December, 2021	3	1	0	4
Pre-requisites/Exposure	Basic concept of Bioinformatics analysis				
Co-requisites					

Course Description

This course is designed with preliminary idea of biological data analysis which will help students learn applications of Bioinformatics.

Course Objectives

The objective of this course is to

1. Prepare students with a clear concept of basic bioinformatics applications.
2. Help them understand fundamental concepts database and big data analysis.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Describe the fundamental concepts of biological databases.
CO2. Identify the different methods of docking and modelling.
CO3. Apply the concept basic bioinformatics search for solving biological problems.
CO4. Outline the concept of structural repository of biological macromolecules.

Course Contents

(A minimum number of 10 experiments must be performed)

Modules	Blooms level*	Number of hours
<ol style="list-style-type: none"> 1. Sequence retrieval (protein and gene) from NCBI and Molecular file formats FASTA, GenBank/Genpept/DDBJ/PDB/SwissProt. 2. Structure download (protein and DNA) from PDB and Molecular viewer by visualization software (Pymol / Rasmol/Jmol/Chimera/DiscoveryStudio) 3. BLAST suite of tools for pairwise alignment 4. Multiple sequence alignment (CLUSTALW/TCoffee) and construction of guidetrees 	L1, L2, L3	4
<ol style="list-style-type: none"> 5. Domain Analysis (pfam/CDART/ CDD/ SMART/ProDom) 6. Gene prediction using GENSCAN/GLIMMER 7. Primary sequence analyses (Protparam) and Secondary structure prediction (GOR, nnPredict). Homology Modeling: Tertiary structure prediction (SWISSMODEL) and Protein structure evaluation - Ramachandran map (PROCHECK) 	L2, L3	4

BCH4206	ADVANCED BIOCHEMISTRY LAB	L	T	P	C
Version 1.1	Date of Approval: 7 th December, 2021	0	0	4	2
Pre-requisites/Exposure	Basic concepts of Chromatography, Spectroscopy and Electrophoresis				
Co-requisites					

Course Description

This course is designed to provide a broad spectrum of modern techniques and their underlying physical, chemical and biological principles. Experiments include buffer preparation, pH measurements, absorption coefficients determination, chromatography and electrophoresis.

Course Objectives

The objective of this course is to

1. Provide students hands-on training in the major instrumentation techniques common to biochemistry.
2. Make students learn regular biochemistry experiments.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Explain major instrumentation techniques common in biochemistry.
 CO2. Demonstrate separation techniques like chromatography and electrophoresis
 CO3. Prepare themselves with experiments involving spectroscopy.

Course Contents:

(A minimum number of 10 experiments must be performed)

Modules	Blooms level*	Number of hours
1. Verification of Beer-Lambert's law and determination of absorption coefficients 2. Paper chromatography – Separation of amino acids and carbohydrates in a mixture 3. Thin layer chromatography of fatty acids 4. DNA Gel Electrophoresis Isoelectric pH of casein	L1, L2, L3	12
5. Amino Acid Assay by Ninhydrin Colorimetric Method 6. Determination of pKa of acetic acid and glycine. 7. Digestion of Protein into Amino Acid	L2, L3	12
8. Isolation of chloroplast from spinach leaves and estimation of Chlorophyll content. 9. Separation of photosynthetic pigments by TLC 10. Isolation of mitochondria from liver and assay of marker enzyme SDH. 11. Isolation of mitochondria from liver and assay of marker enzyme SDH 12. Determination of CMC of detergents.	L3, L4	24

BCH4207	CELL BIOLOGY AND GENETICS LAB	L	T	P	C
Version 1.1	Date of Approval: 7th December, 2021	0	0	2	1
Pre-requisites/Exposure	Fundamental concepts of chromosome and gene				
Co-requisites					

Course Description

This course deals with the study of Chromosomes and provides the cytological explanation of different genetic disease. Chromosome studies are an important laboratory diagnostic procedure in prenatal diagnosis, in certain patients with mental retardation and multiple birth defects, in patients with abnormal sexual development, and in some cases of infertility or multiple miscarriages. Cytogenetic analysis is also useful in the study and treatment of patients with malignancies and hematologic disorder, the course also deals with experiments related to cellular proteins.

Course Objectives

The objective of this course is to

1. Help students learn fundamental concepts of cell division in lab
2. Make students learn structural details of chromosome.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Identify the basic cell division processes of cells.
CO2. Predict the structural details and functions of chromosomes.
CO3. Analyze enzyme polymorphism.

Course content:

(A minimum number of 10 experiments must be performed)

Modules	Blooms level*	Number of hours
A) Cell Biology <ol style="list-style-type: none"> 1. Isolation & visualization of cellular proteins. 2. Quantification of cells by Trypan blue exclusion dye. 3. Calculation of nucleolar frequency following hematoxylin staining 4. Understanding principles of cell culture and aseptic. Techniques. 5. Preparation of adhesion and suspension cell cultures. 6. Assessment of proliferation in cultured cells by MTT. assay. 7. Observation of DNA fragmentation in apoptotic cells 	L1, L2, L3	12
A) Genetics Plant/Animal/Human Cytogenetics: <ol style="list-style-type: none"> 1. Squash preparation from root tips of Allium cepa, analyzing metaphase chromosomes and preparation of karyotype. 2. Squash preparation from root tips of Allium sativum, analyzing metaphase chromosomes and preparation of karyotype. 3. Squash preparation from root tips/shoot tips of Nigella sativa/ Aloe 	L2, L3	6

BCH4208	CLINICAL BIOCHEMISTRY LAB	L	T	P	C
Version 1.1	Date of Approval: 7 th December, 2021	0	0	4	2
Pre-requisites/Exposure	Basic concepts of biomolecules, blood and urine				
Co-requisites					

Course Description

This course is designed to provide students with knowledge of techniques used in the Clinical Biochemistry laboratory for measurement of amino acids, proteins, carbohydrates, and lipids in body fluids. Our main focus is to develop the ability to recognize levels of these biochemical components in both normal and pathophysiological states.

Course Objectives

The objective of this course is to

1. Provide students with hands-on-training in isolation of cell organelles, DNA and RNA from various tissues, serum cholesterol.
2. Provide students learn estimation of the same, qualitative and quantitative analysis of saliva, urea and experiments on blood.

Course Outcomes

On completion of this course, the students will be able to

CO1. Apply experimental procedures biochemical tests to isolate organelles and bio-molecules.

CO2. Identify and describe the biochemical tests to health problems and explain their clinical significance in the assessment of lipid, and carbohydrate metabolism.

CO3. Identify and describe the biochemical tests used in the estimation, qualitative and quantitative analysis various bio-molecules.

Course Contents:

(A minimum number of 10 experiments must be performed)

Modules	Blooms level*	Number of hours
Clinical Biochemistry Lab <ul style="list-style-type: none"> • Absorption spectrum of hemoglobin isolated from wholeblood. • Qualitative and quantitative analysis.of: Urine (urea, uric acid, glucose, proteins, Bence-Jones proteins, Cl⁻, PO₃-3, Ca⁺² Estimation of creatinine) • Experiments onblood: <ul style="list-style-type: none"> A. Identification and count of blood.corpuscles B. Estimation of.haemoglobin C. BCH4209	IMMUNOLOGY	L	T	P	C
Version 1.1	Date of Approval: 7 th December 2021	2	1	0	3
Pre-requisites/Exposure	Basic concepts of innate, acquired immunity and vaccination				
Co-requisites					

Course Description

This course will help the students to understand fundamentals of immune system. They will be able to know about specialized cells and biomolecules involved in our immune system. Student will get an exposure to understand the antigen-antibody interactions and development of diversified population of antibodies and T cell receptors. Students will be able to know the concepts of MHC restriction and graft rejection. This course will provide them an exposure for cutting edge research of immunology.

Course Objectives

The objective of this course is to

1. Familiarize students about the structural features of the components of the immune system as well as their functions.
2. Provide an overview of clinical immunology will help students to understand the utmost importance of this particular branch of science.

Course Outcomes

On completion of this course, the students will be able to

CO1. Identify the fundamental features of immune system.

CO2. Describe structural features of antigen, antibody and the techniques involved in antigen antibody interactions.

CO3. Determine diversity of antibody, T cell receptors, complement system, hypersensitivity, concepts graft acceptance, rejection and MHC restriction. etc

CO4. Compare diseases arising due to immunodeficiency and fundamentals of vaccine development.

Course Content

Modules	Blooms level*	Number of hours
MODULE-I: Cellular basis of Immunity Historical Perspective, Innate and Adaptive Immunity, Hematopoiesis, cells of the immune system, primary and secondary lymphoid organs and tissues. Anatomical barriers, cell types of innate immunity, soluble molecules and membrane associated receptors (PRR), connections between innate and adaptive immunity, localized and systemic response. Complement activation by classical, alternate and MB lectin pathway, biological consequences of complement activation, regulation and complement deficiencies	L1, L2, L3	9
MODULE-II: Antigens and Antibody Antigens, carriers, adjuvants and haptens, factors responsible for immunogenicity, B and T cell epitopes. Structure, classes and subclasses of immunoglobulins, effector functions of antibody, antigenic determinants on Ig, Ig super family. Clonal selection theory of antibody production, monoclonal and polyclonal antibodies, poly reactive antibodies, catalytic antibodies, abzymes. Monoclonal antibodies production and applications	L2, L3	9
MODULE-III: Biology of the B Lymphocyte & T Lymphocyte Dreyer-Bennett hypothesis, Clonal selection theory of antibody production,	L2, L3, L4	9

multigene organization of Ig locus, mechanism of V region DNA rearrangement, mechanisms of antibody diversity. Antigen independent phase of B cell maturation and selection, humoral response – T-dependent and T-independent response, anatomical distribution of B cell populations. General organization and inheritance of MHC, structure, distribution and role of MHC class I and class II proteins, pathways of antigen processing and presentation. Structure and role of T cell receptor (TCR) and co-receptor, T cell development, generation of receptor diversity, selection and differentiation. General properties of effector T cells, cytotoxic T cells (Tc), natural killer cells; NK - T cells and antibody dependent cellular cytotoxicity(ADCC).		
MODULE-IV: Autoimmunity and Hypersensitivity Self-tolerance and autoimmunity, Organ specific and systemic autoimmune diseases, Gell and Coombs classification, IgE mediated (Type I) hypersensitivity, antibody mediated cytotoxic (Type II) hypersensitivity, immune complex mediated (type III) hypersensitivity and delayed type (Type IV) hypersensitivity	L2, L3, L4	5
MODULE-V: Transplantation Immunology and Vaccines Immunological basis of graft rejection, clinical manifestations, immunosuppressive therapy and privileged sites. Vaccines - active and passive immunization, types of vaccines	L2, L3, L4	4

BCH4231	TERM PAPER	L	T	P	C
Version 1.1	Date of Approval: 7th December, 2021	0	0	0	2
Pre-requisites/Exposure					
Co-requisites					

Course Description

The aim of the term paper is to provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking a significant practical unit of examining and analyzing various aspects of Chemistry & its application at a level commensurate with the learning outcomes of the various courses taken up them in the ongoing semester.

Course Objectives

The objective of this course is to

1. Judge the understanding as well as application of the knowledge gained by the students.
2. Provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking a significant practical unit of examining and analyzing various aspects of Chemistry & its application at a level commensurate with the learning outcomes of the various courses taken up them in the ongoing semester.

Course Outcomes

On completion of this course, the students will be able to

- CO1 Enhance their knowledge in a sector of their choice by undertaking a significant practical unit of examining.
- CO2 Analyze various aspects of chemistry and applied chemistry at a level commensurate with the learning outcomes of the various courses taken up by them in the ongoing semester.
- CO3. Enhance their knowledge by extensive literature survey.

Course Contents:

Modules	Blooms level*	Number of hours
<ol style="list-style-type: none"> 1. The term paper will be related to the contemporary business issue and the topic will be given by the department. 2. The presentation of the term paper is scheduled to be held before the commencement of Semester examinations. 3. The paper will carry 100 marks that will be marked on the basis of understanding and organization of content based on the literature review. The Bibliography shall form an important part of the paper. 4. Examples of a few broad areas for term paper (List is indicative, not exhaustive) <ul style="list-style-type: none"> • Inorganic chemistry • Organic chemistry • Physical chemistry • Green chemistry • Agriculture chemistry 	L1, L2 L3, L4, L6	-

BCH4301	RECOMBINANT DNA TECHNOLOGY	L	T	P	C
Version 1.1	Date of Approval: 7th December, 2021	2	1	0	3
Pre-requisites/Exposure	Basic concepts of Genetic engineering				
Co-requisites					

Course Description

This course will help the students to understand current aspects of gene cloning techniques, genomic and DNA library construction, expression of recombinant proteins etc. Other than gene cloning students will be able to know the plant and tissue culture techniques which are primary requisites of gene transformation, protein over expression, tagged based fluorescence microscopy etc. Animal tissue culture will be beneficial during various experimental setups of cell biology, cancer biology and immunology. Learning of plant tissue culture techniques will be highly beneficial to understand fundamentals of transgenic plants.

Course Objectives

The objective of this course is to

1. Help students in understanding the tools used in gene exploration, creation of genomic library, cloning and expression of proteins.
2. Give the students fundamental concepts of tissue culture and an idea about transgenic plants and animals.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Describe the basic concepts of gene cloning.
- CO2. Identify and describe the multiple types of polymerase chain reactions and vector maps
- CO3. Apply various plant and tissue culture techniques.
- CO4. Outline fundamentals of hybridoma technology, *invitro* fertilization and transgenic animals and plants.

Modules	Blooms level*	Number of hours
MODULE-I: Fundamentals of Gene Cloning Restriction and modification systems, restriction endonucleases and other enzymes used in manipulating DNA molecules. sticky ends, blunt ends, linkers and adapters, homopolymer tailing, Synthetic oligonucleotides. Ligation of DNAmolecules.	L1, L2, L3	6
MODULE-II: Cloning Vectors Plasmids and bacteriophages as vectors for gene cloning. Cloning vectors based on <i>E. coli</i> plasmids, pBR322, pUC8, pGEM3Z. Cloning vectors based on M13 and λ bacteriophage, and in vitro packaging. Vectors for yeast, Ti-plasmid, and retroviral vectors, high capacity vectors BAC and YAC.	L2, L3	6
MODULE-III: Transformation, Transfection and Gene Libraries Uptake of DNA by cells. Selection and identification for transformed cells, insertional inactivation, blue- white selection. Transfection. Chemical and physical methods of DNA introduction into cells. The problem of selection, direct selection, marker rescue. Identification of recombinant phages, cDNA and Genomic libraries, identification of a clone from gene library, colony and plaque hybridization probing, Southern and Northern hybridization, methods based on detection of the translation product of the cloned gene.	L2, L3, L4	8
Module-IV: PCR, DNA Sequencing and Fundamentals of polymerase chain reaction, Types of PCR; hot start, multiplex, two step, reverse transcriptase PCR and Nested PCR, quantitative PCR, Primer designing for PCR. Cloning PCR products. DNA sequencing by Sanger's method including Automated Sanger's DNA sequencing. Introduction to Next Generation Sequencing.	L2, L3, L4	8

BCH4303	MOLECULAR BIOLOGY	L	T	P	C
Version 1.1	Date of Approval: 7th December, 2021	2	1	0	3
Pre-requisites/Exposure	Basic concepts of replication, transcription, translation and viruses				
Co-requisites					

Course Description

This course covers a comprehensive study of the biochemical mechanisms that control the maintenance, expression, and evolution of prokaryotic and eukaryotic genomes. The topics include gene regulation, DNA replication, genetic recombination, and mRNA translation. The course also includes the virology in context of animal and plant viruses and their affect on genetic materials.

Course Objectives

The objective of this course is to

1. Give an insight into the processes of DNA replication, transposable genetic elements.
2. Provide indepth knowledge of protein synthesis, targeting, folding and destruction of proteins.
3. Provide fundaments of pathogenic viral infections and mechanism of their multiplication.

Course Outcomes

On completion of this course, the students will be able to

CO1. Describe the structure, biosynthesis and function of DNA and RNA at the molecular level

CO2. Identify interactions of DNA, RNA and Proteins within the cell that lead to proper growth, division, and development.

CO3. Describe the fundamental mechanism of protein processing inside the cells.

CO4. Analyze various types of pathogenic plant and animal viruses and their effect at molecular level.

Modules	Blooms level*	Number of hours
Module-I: Replication General features of replication, the chemistry of DNA synthesis, DNA polymerase, the replication fork, enzymes and proteins in DNA replication, E coli DNA polymerases, topoisomerases and their classification. Linking numbers, Topoisomerase inhibitors and their clinical importance. Stages of replication-initiation, elongation and termination, origin of replication, relationship between replication and cell division, replication in eukaryotes, end replication problem, telomerase, various modes of replication. Comparison of replication in prokaryotes and eukaryotes. Inhibitors of DNA replication and applications in medicine	L1, L2	9
Module-II: Transcription and RNA Splicing Transcription in prokaryotes; Comparison between transcription and DNA replication, RNA polymerases, transcription cycle in bacteria, sigma factor, bacterial promoters, various stages of RNA synthesis, initiation, elongation and termination, rho-dependent and rho-independent termination. Inhibitors of transcription and applications as antimicrobial drugs. Comparison between prokaryotic and eukaryotic transcription. Transcription in eukaryotes; The three classes of eukaryotic RNA polymerases, transcription by RNA polymerase II, RNA polymerase II core promoters, general transcription factors, transcription by RNA polymerase I and III. Transcription control. Inhibitors of eukaryotic transcription and their applications. RNA Processing; Various types of RNA processing- polyadenylation and capping, processing of rRNA and tRNA. Chemistry of RNA splicing, the spliceosome machinery, splicing pathways, group I and group II introns, alternative splicing, exon shuffling and RNA editing.	L2	9
Module III: Translation Salient features of the genetic code, triplet nature, degenerate, wobble in the anticodon. Experimental approaches used to decipher the genetic code. Suppressor tRNAs. Exceptions to the nearly universal genetic code. Messenger RNA, transfer RNA, charging of tRNA. The structure of ribosome. Three stages of translation-initiation, elongation and termination. Translation in eukaryotes. Regulation of translation. Comparison of prokaryotic and eukaryotic protein synthesis. Inhibitors of translation and their clinical importance.	L2, L4	9
MODULE- IV: Eukaryotic Gene expression & Molecular Virology Gene Expression: Regulating expression of eukaryotic genes. Role of chromatin in gene expression and silencing, enhancers and insulators, activators and repressors, Regulatory RNAs in eukaryotes: synthesis and mechanism of siRNA and miRNA. Molecular Virology: Nature and classification: The viral particles: capsid, envelope, other Virion components, Prion, complex viruses. Isolation and cultivation of viruses. Virus purification, Assay of animal, bacterial and plant viruses. Multiplication of bacteriophages from infection to maturation and release. Abortive infection. Viral interference and interferon. Viral diseases. General outline with specific examples of common plant pathogenic viruses	L2, L4	9

BCH4306	MOLECULAR BIOLOGY AND MICROBIOLOGY LAB	L	T	P	C
Version 1.1	Date of Approval: 7th December, 2021	-	-	4	2
Pre-requisites/Exposure	Fundamental concepts of microbiology and molecular biology				
Co-requisites					

Modules	Blooms level*	Number of hours
----------------	----------------------	------------------------

Course Description

A Laboratory course providing hands-on experience and covering conceptual background and fundamental techniques in molecular biology including plasmid as well as genomic DNA isolation, protein and DNA estimation, gel electrophoresis etc. The curriculum also covers microbiological techniques like pure culture preparation on a variety of media, how various media being used in routine lab work practice account for differential and selective influences on microbial growth rates.

Course Objectives

The objective of this course is to

1. Provide training and experience in DNA, RNA and protein molecular biology techniques.
2. Provide experimental training of bacterial, fungal culture and various staining processes.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Prepare and identify genomic and plasmid DNA from different sources.
- CO2. Prepare and describe bacterial, fungal culture and serial dilution for calculating CFU
- CO3. Identify various microbial populations through staining process.
- CO4. Analyze the growth curve and to perform antibiotic sensitivity test.

Course Content

(A minimum number of 10 experiments must be performed)

Prof. (Dr.) Anil Kumar

MICROBIOLOGY PRACTICALS: <ol style="list-style-type: none"> 1. Preparation of glassware for microbiological work, cotton plugs, medium and their sterilization 2. Sterilization of heat sensitive material by filtration. 3. Preparation and sterilization of medium, preparation of slants and stabs, pouring of medium into plates. 4. Serial dilution, plating for counting colonies. 5. To perform various culture transfer techniques: Streaking, Spreading, Pouring, sub-culturing. 6. Isolation of microorganisms from soil and water collected from different places. 7. Single colony isolation techniques and it's preservation. 8. Examination of microorganisms: Simple staining, Gram staining, Acid Fast Staining 9. To prepare temporary mount of algae (spirogyra) 10. To prepare temporary mount of fungi (Penicillium) 11. Endospore staining 12. Staining of flagella 13. Staining of capsule 14. Localization of root nodule bacteria by staining. 15. Study of different shapes of bacteria, fungi, algae, protozoa using permanent slides/pictographs 16. Study the morphological structures of viruses (DNA and RNA) and their important characters using electron micrographs. 17. Bacterial growth studies: Bacterial number counting by haemocytometer, colony counting, bacterial growth curve, determination of generation time. 18. Antibiotic sensitivity tests, antibiotic assay by paper disc / cup method, MIC determination. Purification of α-amylase from <i>Bacillus aminolucifecius</i> 	L1, L3	L2, 24
MOLECULAR BIOLOGY PRACTICALS: <ol style="list-style-type: none"> 1. Isolation of chromosomal DNA from <i>E. coli</i> cells 2. To hydrolyze DNA and separate nucleotide bases by paper chromatography 3. To plot ultraviolet absorption spectrum of DNA 4. Determination of DNA concentration by A₂₆₀nm 5. Determination of the melting temperature 6. Estimation of DNA by diphenylamine 7. Separation, identification and estimation of free amino acids. 8. Study of Immune-electrophoresis 9. Estimation of RNA by Orcinol Method 10. Extraction of total nucleic acids from plant tissue 11. To study growth curve and diauxic growth curve effect in <i>E. coli</i> 12. Isolation of total RNA from bacteria/yeast 		24

BCH4307	INSTRUMENTATION AND GENETIC ENGINEERING LAB	L	T	P	C
Version 1.1	Date of Approval: 7th December, 2021			4	2
Pre-requisites/Exposure	Handling , measurement and analysis of instrumental data experiments related to genetics				
Co-requisites					

Course Description

This practical course curriculum includes spectroscopy, SDS-PAGE analysis, PCR etc. Using above mentioned instruments basic protein folding unfolding studies for biochemistry students included in the course curriculum.

Course Objectives

The objective of this course is to

1. Provide training to students in handling of some important instruments in laboratory for performing some biological experiment.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Prepare themselves for quantitative titrations.
- CO2. Describe methods of SDS-PAGE analysis.
- CO3. Differentiate between different types of PCR.
- CO4. Illustrate different physical experiments.

Course Content

(A minimum number of 10 experiments must be performed)

Modules	Blooms level*	Number of hours
1. Conductometry: Estimation of Cl ⁻ or SO ₄ by conductometric precipitation titration. 2. Viscometric study of DNA and protein denaturation 3. Size exclusion chromatography for separation of a mixture proteins 4. Separation of amino acid acids by TLC/paper chromatography 5. To perform agarose gelelectrophoresis 6. Separation of protein by ion-exchange chromatography 7. Separation of protein by SDS-PAGE	L1, L2, L3	12
8. EMSA (virtuallab) 9. Virtual lab on Microarray profiling or 2D-DIGE 10. Virtual Lab of Primer designing 11. Virtual lab on extraction of sequence from genomic and DNA libraries. 12. Virtual lab of PCR, Restriction digestion and Cloning and Vector analysis. 13. DNA estimation by UV spectrophotometry. 14. Transformation, Competent cell preparation and Isolation of plasmid DNA from <i>E.coli</i> amplification of a DNA fragment by PCR	L2, L3	12

BCH4308	MICROBIOLOGY	L	T	P	C
Version 1.1	Date of Approval: 7th December, 2021	2	1	0	3
Pre-requisites/Exposure	Basic concept of microbes and microbial genetics				
Co-requisites					

Course Description

This course curriculum covers structure and physiology of free-living and pathogenic bacteria. The diversity of their metabolic activities, the interaction of microbes with their environment, symbiotic relationships are also included in this course. It curriculum also include industrial role of microbial population and genetic recombination mechanism of microbes.

Course Objectives

The objective of this course is to

1. Provide fundamental knowledge different microbial pathogens.
2. Understand outstanding importance of microbes in versatile applications.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Describe and identify different types of microorganisms.
 CO2. Describe the relevance of microorganisms in industry.
 CO3. Determine the plant-microbe and animal-microbe interaction.
 CO4. Analyze the fundamental microbial culture techniques and genetic material exchange mechanism.

Course Content

Modules	Blooms level*	Number of hours
MODULE-I: Introduction to microbiology Overview of Microbial world & development Microbiology as a science Isolation, characterization & growth of microorganisms & control of microbial growth (disinfection & sterilization) Gross and time structure of bacteria, viruses and eukaryotic Microbes, Microbial nutrition and physiology, microbial taxonomy	L1, L2, L3	9
MODULE-II: Microbial technology Brief overview of use of microbiology in industries, pasteurization, fermentation, use of microbes in agriculture, microbial diseases of plants & nitrogen fixation	L2, L3	9
MODULE-III: Microbial pathogens Microbes in health & disease & host parasite relationship, selected organisms: (E.coli, vibrio cholerae M.tuberculosis, S. cerevisiae, Cyanobacteria, Plasmodium, Pox Virus, Influenza virus & λ phage), genetically modified organisms	L2, L3, L4	9
MODULE-IV: Microbial Genetics Culture of microorganisms; Methods for isolating pure cultures; types of culture media; enrichment culture techniques; maintenance and preservation of pure cultures. Control of microorganisms; physical and chemical methods. Bacterial growth: definition, growth parameters measurement of growth synchronous growth growth kinetics factors	L2, L3, L4	9

affecting growth. Batch and continuous culture Differentiation: endospore formation – cytological physiological and genetic aspects, germination. Outlines of biosynthesis of peptidoglycan major aminoacids and proteins. Regulatory mechanisms in bacteria induction repression, feedback inhibition, catabolite repression and attenuation. Manipulation of biochemical regulatory mechanisms for over production of metabolites. Genetic recombination in Bacteria; Identification and selection of mutants, transformation, natural transformation systems, mechanism, gene mapping by transformation; chemical-mediated and electrotransformation. Conjugation- discovery, nature of donor strains and compatibility, interrupted mating and temporal mapping, Hfr, F12 heteroduplex analysis, chromosome transfer in other bacteria, molecular pathway of recombination.

BCH4310	ECOLOGY AND EVOLUTION	L	T	P	C
Version 1.1	Date of Approval: 7th December, 2021	2	1	0	3
Pre-requisites/Exposure	Basic concept of ecology				
Co-requisites					

Course Description

This course aims to lead the students through different levels of the living world starting from ecological principals, parameters and analytics to organisms, continuing through populations and introducing finally communities and ecological succession. Structure, function and process of ecological sciences are main components of this course followed by detailed understanding of biodiversity and its conservation. The last module also helps the students to understand the effect on ecosystem due to reckless use of resources and increasing pollution due to anthropogenic activities. Additionally this course deals with evolutionary traits and behavioral effect

Course Objectives

The objective of this course is to

1. Provide students with a detailed in-sight into the basics of ecological sciences
2. Understand processes of population distribution.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Describe different ecological aspects.
- CO2. Identify concepts of population distribution.
- CO3. Apply the requirements of field experiments.
- CO4. Assess the short term and long term effects of pollution.

Modules	Blooms level*	Number of hours
Module-I: Ecology –I The Environment: Physical environment; biotic environment; biotic and abiotic interactions. Habitat and Niche: Concept of habitat and niche; niche width and overlap; fundamental and realized niche; resource partitioning; character displacement. Population Ecology: Characteristics of a population; population growth curves; population regulation; life history strategies (r and K selection); concept of metapopulation – demes and dispersal, interdemec extinctions, age structured populations. Species Interactions: Types of interactions, interspecific competition, herbivory, carnivory, pollination, symbiosis. Community Ecology: Nature of communities; community structure and attributes; levels of species diversity and its measurement; edges and ecotones. Ecological Succession: Types; mechanisms; changes involved in succession; concept of climax. Ecosystem Ecology: Ecosystem structure; ecosystem function; energy flow and mineral cycling (C,N,P); primary production and decomposition; structure and function of some Indian ecosystems: terrestrial (forest, grassland) and aquatic (fresh water, marine, estuarine).	L1, L2, L3	9
Module-II: Ecology-II Biogeography: Major terrestrial biomes; theory of island biogeography; biogeographical zones of India. Applied Ecology: Environmental pollution; global environmental change; biodiversity: status, monitoring and documentation; major drivers of biodiversity change; biodiversity management approaches. Conservation Biology: Principles of conservation, major approaches to management, Indian case studies on conservation/management strategy (Project Tiger, Biosphere reserves)	L2, L3	9
Module-III: Evolution and Behavior-I Emergence of evolutionary thoughts Lamarck; Darwin–concepts of variation, adaptation, struggle, fitness and natural selection; Mendelism; Spontaneity of mutations; The evolutionary synthesis. Origin of cells and unicellular evolution: Origin of basic biological molecules; Abiotic synthesis of organic monomers and polymers; Concept of Oparin and Haldane; Experiment of Miller (1953); The first cell; Evolution of prokaryotes; Origin of eukaryotic cells; Evolution of unicellular eukaryotes; Anaerobic metabolism, photosynthesis and aerobic metabolism. C. Paleontology and Evolutionary History: The evolutionary time scale; Eras, periods and epoch; Major events in the evolutionary time scale; Origins of unicellular and multi cellular organisms; Major groups of plants and animals; Stages in primate evolution including Homo.	L2, L3	9
Module-IV: Evolution and Behavior-II Molecular Evolution: Concepts of neutral evolution, molecular divergence and molecular clocks; Molecular tools in phylogeny, classification and identification; Protein and nucleotide sequence analysis; origin of new genes and proteins; Gene duplication and divergence. The Mechanisms: Population genetics – Populations, Gene pool, Gene frequency; Hardy-Weinberg Law; concepts and rate of change in gene frequency through natural selection, migration and random genetic drift; Adaptive radiation; Isolating mechanisms; Speciation; Allopatricity and Sympatricity; Convergent evolution; Sexual selection; Co-evolution. Brain, Behavior and Evolution: Approaches and methods in study of behavior; Proximate and ultimate causation;	L2, L3	9

Altruism and evolution-Group selection, Kin selection, Reciprocal altruism; Neural basis of learning, memory, cognition

BCH4311	MICROBIOLOGY LAB	L	T	P	C
Version 1.1	Date of Approval: 7th December, 2021	0	0	4	2
Pre-requisites/Exposure	Fundamental concepts of microbes and culture techniques				
Co-requisites					

Course Description

Curriculum includes standard techniques for isolation, culture, and identification of microorganisms. Investigations in this laboratory consist of extensive use of microscopes and bacterial culture reagents to emphasize phenotypical differences in bacteria to facilitate understanding of microbial life and microbial metabolism.

Course Objectives

The objective of this course is to

1. Teach microbiological techniques and to show students the impact of microbes on our daily lives and their central roles in nature.
2. Transfer living microbes using aseptic technique.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Prepare them for maintaining an aseptic environment.
- CO2. Demonstrate, describe and identify specimen preparation and staining.
- CO3. Relate their competency in bacterial sampling and culturing techniques
- CO4. Identify appropriate methods to estimate the number of microorganisms in a sample (using, for example, viable plate count, and spectrophotometric methods).

Course Content

(A minimum number of 10 experiments must be performed)

Modules	Blooms level*	Number of hours
1. Observation of microorganisms using bright field microscope - Bacteria, Protozoa, Moulds and Yeasts, Algae – from natural habitat 2. Observation of microorganisms using staining techniques: a. Monochrome staining b. Negative /Relief staining (Capsule staining) c. Gram staining of bacteria d. Spore staining 3. Observation of motility in bacteria using: a. Hanging drop method and Cragie's tube method b. Swarming growth methods 4. Enumeration of yeast cells using a counting chamber 5. Cultivation of microorganisms: a. Preparation of simple laboratory nutrient media (solid and liquid) and using them to cultivate bacteria. Observation of the growth of cultures and reporting of colony and cultural characteristics (Nutrient and MacConkey's agar)	L1, L2, L3	8
6. Isolation of bacteria by streak plate technique 7. Enumeration of bacteria from fermented food / soil / water by: a. Spread plate method b. Pour plate method 8. Aseptic transfer techniques (slant to slant, broth to broth, broth to agar and Agar to Agar)	L2, L3	8

Prof. (Dr.) Anil Kumar

Manesar Gurgaon-122413

9. Preservation of cultures on slants, soil and on grain surfaces; Revival of these cultures and lyophilized cultures. 10. Checking sterilization efficiency of autoclave using a biological Indicator (<i>B. stearothermophilus</i>)		
11. Demonstration of checking of efficacy of chemical disinfectant: Phenol Coefficient Rideal Walker method) 12. Preparation of Winogradsky column and observation of different types of microorganisms using bright field microscope. 13. Study of normal flora of skin: Cultivating and observing different morphoforms of bacteria from skin Study of effect of washing skin with soap and disinfectant on its microflora 14. To study the effect of different parameters on growth of <i>E. coli</i> : pH, temperature, sodium chloride concentration Study of Oligodynamic action of heavy metal	L2, L3, L4	8

BCH4313	ECOLOGY AND EVOLUTION LAB	L	T	P	C
Version 1.1	Date of Approval: 7th December, 2021	0	0	4	2
Pre-requisites/Exposure	Fundamental concepts of Ecosystem				
Co-requisites					

Course Description

Curriculum includes Introduction to ecological sampling techniques and data analysis. Experience in field sampling, laboratory and computer modeling of sampling approaches, and scientific writing is also included.

Course Objectives

The objective of this course is to

1. Describe behavioral and physiological mechanisms by which organisms interact with other organisms and with their physical environment.
2. Field and lab investigations of both terrestrial and aquatic ecosystems on a quantitative basis.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Apply the skills in the basic ecological investigative techniques.
- CO2. Analyze, and present ecological data using appropriate sampling methods and instrumentation and quantitative statistical and graphical analyses.
- CO3. Interpret organism environment relationships.
- CO4. Describe, identify and make observations, generate hypotheses, and carry out simple experiments and/or collect field data to answer questions from different sub-disciplines in ecology.

Course Content

(A minimum number of 10 experiments must be performed)

Modules	Blooms level*	Number of hours
1. Assessment of density, frequency and abundance of plants/animal in a community using various techniques i.e. transect, quadrat etc. 2. Determination of physical and chemical characteristics of soil. 3. Assessing influence of light, temperature and moisture on plant germination and growth. 4. Assessing influence of soil nutrient status on plant germination and growth. 5. Spatial variations of dissolved oxygen concentration in water and percentage saturation. 6. Dissolved free carbon dioxide dynamics in relation to pH and alkalinity of water. 7. Estimation of total hardness, total alkalinity and Salinity of water. 8. Estimation of Primary productivity and assessment of nutrient status of waterbodies. 9. Microbial analysis of soil and water. 10. Study of insect diversity in soil. 11. Productivity determination of different ecosystems-Lindeman's efficiency. 12. Microbial analysis of soil and water. 13. Evolutionary studies on adaptive characters 14. Phylogenetic analysis	L1, L2, L3	32

BCH4335	SUMMER INTERNSHIP EVALUATION	L	T	P	C
Version 1.1	Date of Approval: 7th December, 2021	0	0	0	6
Pre-requisites/Exposure	Fundamental of basic biochemistry experiments				
Co-requisites					

Course Description

This is experiential education opportunities for students in the form of internships, and defines an internship as a supervised, credit-bearing, career-related learning experience in the workplace that allows students to apply knowledge acquired through their classes and studies to practical situations and problems. Such experiences promote engaged learning by helping students find connections between theory and practice, between learning in the classroom and learning outside the classroom, and between their academic interests and potential career possibilities.

Course Objectives

The objective of this course is to

1. Working as a summer intern gives hands-on practical training experience.
2. One of the main objectives of an internship is to expose students to a particular research area that give him/her experience before entering research lab or industry.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Demonstrate his/her mastery of the principle disciplines of Biochemistry.
 CO2. Create and identify excellent critical thinking and problem solving abilities.
 CO3. Prepare and describe technical mastery of fundamental wet laboratory skills, use proper laboratory safety protocols, and demonstrate proficiency in using computers to solve chemical problems.
 CO4. Recognize effective scientific communication skills – both written and oral. Students will be able to write reports and present the results of their own scientific works.

Course Content

Modules	Blooms level*	Number of hours
Methodology: Practical training is based on the theoretical subjects studied by students. It can be arranged within the college or any in any related industrial unit or in any research lab. The students are to learn various industrial, technical and administrative processes followed in the industry/research. In case of on campus training the students will be given specific tasks of synthesizing /testing/analysis/characterization. On completion of the practical training the students are to present a report covering various aspects learnt by them and give a presentation of the same.	L3,L4,L5,L6	NTCC

BCH4407	GOOD LABORATORY PRACTICES SEMINAR	L	T	P	C
Version 1.1	Date of Approval: 7th December, 2021				1
Pre-requisites/Exposure	Workshop on Good Laboratory Practice				
Co-requisites					

Course Description

The objective of this course is to judge the understanding as well as application of the knowledge gained by the students. The aim of the this course is to provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking a significant practical unit of examining and analyzing various aspects of Biochemistry & its application at a level commensurate with the learning outcomes of the various courses taken up them in the ongoing semester.

Course Objectives

The objective of this course is

1. To judge the understanding as well as application of the knowledge gained by the students.
2. To provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking a significant practical unit of examining and analyzing various aspects

Course Outcomes

On completion of this course, the students will be able to

CO1. Outline salient features of ideal practices in research labs.

CO2. Identify the contemporary research ethics and the topics with fundamental research infrastructure.

CO3. Compile the patterns of research etiquettes in various sectors.

CO4. Review and understand the interdisciplinary research areas of Biochemistry

BCH4437	MAJOR PROJECT	L	T	P	C
Version 1.1	Date of Approval: 7th December, 2021				8
Pre-requisites/Exposure	Basic biochemical practical, presentation and writing skills				
Co-requisites					

Course Description

This course deals with both the theoretical and practical aspects of designing dissertation research and successfully defending the design in a proposal hearing. The purpose of the course is to assist students through the proposal and dissertation writing processes.

Course Objectives

The objective of this course is to

1. Training of students as an independent researcher before entering academics or industries.
2. Develop interest for genuine exploration of the unknown that leads to new knowledge which often warrants publication.
3. Provide exposure of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Course Outcomes

On completion of this course, the students will be able to

CO1. Recognize independent skills of critical investigation

CO2. Criticize the problem systematically. They will be able to relate problem with available methodologies and evidence.

CO3. Analyze appropriate techniques and draw concluding remarks.

CO4. Describe and communicate research concepts and contexts clearly and effectively both in writing and orally

Course Content

Modules	Blooms level*	Number of hours
<p>GUIDELINES FOR PROJECT FILE AND PROJECT REPORT</p> <p>Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.</p> <p>Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.</p> <p>Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critically analyzed by the faculty guide and corrected by the student at each stage.</p>	L2,L4,L5,L6	NTCC

PROJECT FILE

The Project File may be a very useful tool for undertaking an assignment along-with a normal semester, an exploratory study, sponsored projects, a project undertaken during summer period or any other period as per curriculum where the researcher is working with a company/organization. The project/ assignment may also be a part of the bigger research agenda being pursued by a faculty/ institution/ department. The Project File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation. This file may be considered in continuous assessment.

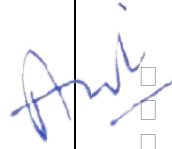

In general, the File should be comprehensive and include:

- ☐ A short account of the activities that were undertaken as part of the project;
- ☐ A statement about the extent to which the project has achieved its stated objectives;
- ☐ A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;
- ☐ Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;
- ☐ Any problems that have arisen and may be useful to document for future reference.

PROJECT REPORT

The Project Report is the final research report that the student prepares on the project assigned to him. In case of sponsored project the layout of the project could be as prescribed by the sponsoring organization. However, in other cases the following components should be included in the project report:

- ☐ **Title or Cover page**
The title page should contain Project Title; Students Name; Program; Year and Semester and Name of the Faculty Guide.
- ☐ **Acknowledgement(s)**
Acknowledgment to any advisory or financial assistance received in the course of work may be given. It is incomplete without student's signature.
- ☐ **Abstract**
A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project. It should not exceed more than 1000 words.
- ☐ **Table of Contents**
- ☐ **Titles and subtitles are to correspond exactly with those in the text.**
- ☐ **Introduction**
Here a brief introduction to the problem that is central to the project

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

☐ **Materials and Methods**

This section should aim at experimental designs, materials used (wherever applicable). Methodology should be mentioned in details including modifications undertaken, if any. It includes organization site(s), sample, instruments used with its validation, procedures followed and precautions.

☐ **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing this section, emphasis should be laid on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary, do not write in “point” form.

While presenting the results, write at length about the various statistical tools used in the data interpretation. The result interpretation should be simple but full of data and statistical analysis. This data interpretation should be in congruence with the written objectives and the inferences should be drawn on data and not on impression. Avoid writing straight forward conclusion rather, it should lead to generalization of data on the chosen sample.

Results and its discussion should be supporting/contradicting with the previous research work in the given area. Usually one should not use more than two researches in either case of supporting or contradicting the present case of research.

☐ **Conclusion(s) & Recommendations**

A conclusion should be the final section in which the outcome of the work is mentioned briefly. Check that your work answers the following questions:

- ☐ Did the research project meet its aims (check back to introduction for stated aims)?
- ☐ What are the main findings of the research?
- ☐ Are there any recommendations?
- ☐ Do you have any conclusion on the research process itself?

☐ **Implications for Future Research**

This should bring out further prospects for the study either thrown open by the present work or with the purpose of making it more

<p>comprehensive.</p> <p><input type="checkbox"/> Appendices The Appendices contain material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.</p> <p><input type="checkbox"/> References References should include papers, books etc. referred to in the body of the report. These should be written in the alphabetical order of the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognized</p> <p>The Layout Guidelines for the Project File & Project Report:</p> <p><input type="checkbox"/> A4 size Paper</p> <p><input type="checkbox"/> Font: Arial (10 points) or Times New Roman (12points)</p> <p><input type="checkbox"/> Line spacing: 1.5</p> <p><input type="checkbox"/> Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3cm</p> <p>ASSESSMENT OF THE PROJECT FILE AND THE PROJECT REPORT Essentially, the assessment will be based on the quality of the report, the technical merit of the project and the project execution. Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project. Project execution is concerned with assessing how much work has been put in. The Project should fulfill the following <i>assessment objectives</i>:</p> <p><input type="checkbox"/> Range of Research Methods used to obtain information</p> <p><input type="checkbox"/> Execution of Research</p> <p><input type="checkbox"/> Data Analysis (Analyze Quantitative/ Qualitative information)</p> <p><input type="checkbox"/> Quality Control</p> <p><input type="checkbox"/> Conclusions</p>

PHYSICAL CHEMISTRY LAB

Course code: CHY4105

Credit Units 02

(Minimum 10 Experiments to be performed)

Phase Equilibria:

1. Determination of mutual solubility curve of phenol and water and find consolute point.
2. To determine the distribution coefficient of I_2 between two immiscible solvents(CCl_4 and H_2O).

Chemical Kinetics:

3. To study kinetically the alkaline hydrolysis of ethyl acetate.
4. To study the kinetics of reaction between $K_2S_2O_8$ and KI :
 - a. Determination of the rate constant and order of reaction.
 - b. To study the influence of ionic strength on the rate constant.
5. Determination of the effects of change of temperature, concentration of reactant and ionic strength of the media on the velocity constant of hydrolysis of an ester

Electrochemistry:

6. Determination of the velocity constant, order of the reaction and energy of activation for saponification of ethyl acetate by sodium hydroxide conductometrically.
7. Determine the equivalent conductance of weak electrolyte at infinite dilution by Kohlrausch law.
8. Determination of solubility and solubility product of sparingly soluble salts (e.g., $PbSO_4$, $BaSO_4$) conductometrically.
9. Determination of the strength of strong and weak acids in a given mixture conductometrically.

Potentiometry:

10. Measurement of pH of buffer solution
11. Determination of the strength of strong and weak acids in a given mixture using a potentiometer/pH meter.
12. Acid base titration in a non-aqueous media using a pH meter.

Colligative Properties

13. Determination of depression in Freezing point of solutions.

Adsorption

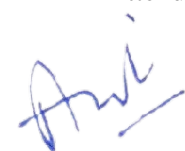

14. Determine the adsorption isotherms of acetic acid from aqueous solutions by charcoal and verify Freundlich adsorption isotherm.

***MSDS -Compilation of MSDS of chemicals used by students in each experiment is compulsory**

Examination Scheme:

ORGANIC CHEMISTRY LAB

Course Code: CHY4106

Credit Units: 02

(Minimum 10 Experiments to be performed)

Qualitative Analysis:

1. Separation, purification and identification of compounds of binary mixture, derivative preparation and confirmatory tests.

Organic Synthesis:

2. Oxidation reaction
3. Reduction: Transfer hydrogenation reaction
4. Aldol condensation: Dibenzal acetone from benzaldehyde.
5. Friedel Craft's reaction
6. Preparation of p-amino azobenzene from aniline via diazoaminobenzene.
7. Preparation of m-phenylene diamine from Nitrobenzene via m-dinitrobenzene and m-nitroaniline.
8. Preparation of benzidine from benzene involving benzidine rearrangement.

Quantitative Analysis:

9. Determination of the percentage of sulphur in the given organic compounds by Messenger's method.
10. Estimation of Glucose using Fehling's solution.
11. Determination of equivalent weight of the given carboxylic acid using Silver-salt method.
12. Determine percentage purity of the given carbonyl compound using hydroxylamine hydrochloride.
13. Determination of strength of known aniline solution by bromination using KBr-KBrO₃ mixture.

Extraction of Natural products:

14. Extraction of caffeine from tea leaves.
15. Extraction of Eugenol from Cloves Oil

***MSDS -Compilation of MSDS of chemicals used by students in each experiment is compulsory**

RESEARCH SEMINAR

Course Code: CHY4108

Credit Units: 01

Objectives

A seminar is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning for research based activity. Prereq., graduate standing in chemistry/ biochemistry/ Forensic Sciences on consent of instructor. Seminar to acquaint new graduate students with departmental research (This one will be running through out first semesters on every Monday any Lecture, where normally Ph.D students /internal Faculties /external speakers will give talk on their research or other topic of their specialization).

The trainer has to make sure that the aspect covered is practically practiced by the participants. The evaluation will be done by Board of examiners comprising of the faculties.

Major Themes for Seminar

The seminar may be conducted on any of the following major themes:

- Nuclear Chemistry
- Modern trend in Inorganic Chemistry
- Modern trend in Organic Chemistry
- Modern trend in Physical Chemistry
- Nanotechnology and its application
- Polymer Chemistry
- Pharmaceuticals
- Food Technology
- Agriculture Chemistry
- Computational Chemistry
- Green Chemistry
- Any other relevant topics

These themes are merely indicative and other recent and relevant topics of study may be included.

Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

ANALYTICAL CHEMISTRY

Course Code: CHY4201

Credit Units: 03

Course Contents:

MODULE I: WET CHEMICAL METHODS OF ANALYSIS

Volumetric analysis –neutralization, precipitation, complexometric and redox titrations- theoretical titrations curves - theory of indicators; Gravimetric analysis, volatilization and precipitation methods- homogeneous precipitation; Colorimetric analysis - principles and applications- estimation of iron and nickel.

MODULE II: ELECTROANALYTICAL TECHNIQUES

Conductometry, and high frequency titrations; Potentiometry, pH-metry, Ion selective electrodes; Electrogravimetry and coulometry; Voltammetry –polarography, amperometric titrations and anodic stripping voltammetry; principles, practice and applications.

MODULE III: SEPARATION TECHNIQUES

Solvent extraction and Ion exchange techniques – principles and applications; Chromatographic techniques – adsorption chromatography, thin layer chromatography, gas chromatography, high performance chromatography, size exclusion chromatography; Supercritical fluid chromatography.

MODULE IV: RESEARCH BASED ANALYTICAL TECHNIQUE

Preparations of solutions of different strength and scales (molarity, molality, normality, formality, w/w, v/v ratio calculation exercises) buffers, gel apparatuses, native and SDS -PAGE gels, Isoelectric point

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

INDUSTRIAL CHEMISTRY

Course Code: CHY4202

Credit Units: 03

Course Objective:

This course is intended to give the students the knowledge of various aspects of industrial chemistry with the focus on preparation of different types of glass, cement, soaps and detergent. A student taking up this course should be able to understand the logic and chemistry behind the different types of catalytic process and catalyst.

Course Contents:

MODULE I: GLASS INDUSTRY

Introduction, classification of glass, basic raw materials of glass, manufacturing processes including chemical reactions, some special glasses: optical glass, coloured glass, fibre glass, laminate glass, safety glass, photosensitive glass, photochromatic glass, lead glass, borosilicate glass and glass wool.

MODULE II: CEMENT INDUSTRY

Types of cement, manufacture of Portland cement, composition, setting and hardening of cement, Mortars and concrete, gypsum, plaster of paris, estimation of silica, alumina, calcium oxide and sulphates in Portland cement.

MODULE III: SOAPS AND SYNTHETIC DETERGENTS

Manufacture of detergent, types of detergents, anionic, cationic, nonionic and amphoteric detergents, manufacture of soap, Liquid soap.

MODULE IV: HOMOGENEOUS AND HETEROGENEOUS CATALYSIS and CATALYTIC PROCESSES

Conversion, selectivity, contact time, time on stream, Kinetics of heterogeneous catalysis, adsorption, phase transfer catalysis, super acid catalysis, intramolecular catalysis, enzyme catalysis, semi-conductor catalysis and photocatalysis. Promoters, stabilizers, catalyst deactivation by poisoning, fouling and sintering, Cracking, reforming, alkylation, isomerization, hydrogenation/dehydrogenation, dehydrocyclisation, dehydrosulphurization, hydrocracking, oxidation, metathesis, carbonylation, polymerization, synthetic fuels, hydrogen generation.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE

ORGANOMETALLIC CHEMISTRY

Course Code: CHY4211

Credit Units:04

Course Objective:

The main idea of this course is to give students a brief idea about Bioinorganic chemistry that examines the role of metals in biology. It includes the study of both natural phenomena such as the behaviour of metalloproteins as well artificially introduced metals, including those that are non-essential, in medicine and toxicology. Many biological processes such as respiration depend upon molecules that fall within the realm of inorganic chemistry. The discipline also includes the study of inorganic models or mimics that imitate the behaviour of metalloproteins. It also covers organometallic chemistry which is the study of chemical compounds containing bonds between carbon and a metal. Since many compounds without such bonds are chemically similar, an alternative may be compounds containing metal-element bonds of a largely covalent character. Organometallic chemistry combines aspects of inorganic chemistry and organic chemistry.

Course Content:

MODULE I: ROLE OF METAL IONS IN BIOLOGICAL SYSTEM

Elements of life: essential major, trace and ultratrace elements. Basic chemical reactions in the biological systems and the role of metal ions (specially Na^+ , K^+ , Mg^{2+} , Ca^{2+} , $\text{Fe}^{3+/2+}$, $\text{Cu}^{2+/+}$, and Zn^{2+}). Metal ion transport across biological membrane Na^+/K^+ ion pump, ionophores. Toxic metal ions and their effects, chelation therapy (examples only), Pt and Au complexes as drugs (examples only), metal dependent diseases.

Module-II: Biological functions of haemoglobin, myoglobin and hemocynin, cytochromes and ferredoxins, carbonate bicarbonate buffering system and carbonicanhydrase. Biological nitrogen fixation, Photosynthesis: (Photosystem-I and Photosystem-II), chlorophyll and related elementary ideas

MODULE III: METALLOCENE

Metallocenes, Structure and synthesis of cyclopentadienyl complexes, Covalent vs Ionic bonding in metallocenes, Arene complexes

MODULE IV: REACTIONS IN ORGANOMETALLIC CHEMISTRY

Substitution reactions in carbonyl complexes, Oxidative addition and reductive elimination, Insertion and elimination, Nucleophilic and electrophilic attack of coordinated ligands, Synthesis of ferrocenes derivatives, carbonylate anion as nucleophile. Introduction to carbenes, types of carbenes (Fischer type and Schrock type carbene complexes, synthesis, structure, bonding and reactions of carbenes.

MODULE V: APPLICATIONS OF ORGANOMETALLICS IN CATALYSIS

(b) In Catalysis: Asymmetric hydrogenation; synthesis of acetic acid (Monsanto) Cativa process; Arylation/vinylation of olefins (Heck reaction); Wacker process (olefin oxidation); Asymmetric epoxidation.

MODULE- VI: METAL π -COMPLEXES

Metal carbonyl, structure and bonding, 18 electron rule, vibrational spectra of metal carbonyls for bonding and structural elucidation, important reactions of metal carbonyls; preparation, bonding structure and important reaction of transition metal nitrosyl, dinitrogen and dioxygen complexes; tertiary phosphine as ligand.

INTRODUCTION TO LABORATORY SAFETY

Course Code: CHY4212

Credit Units: 01

Course Objective :

The basic goal of this course is to make sure students know about potential work hazards, how to recognize them, and how to protect themselves. This course is designed to help reduce possible accidents arising out of negligence. This introductory course in laboratory chemical safety is required for all entering chemistry graduate students. Topics to be covered include laboratory emergencies, chemical hazards, lab inspections and compliance, managing and working with chemicals, waste handling, case studies of university accidents.

Course Contents:

MODULE I: INTRODUCTION TO LABORATORY SAFETY

Risks in a Research Laboratory, Health Effects Due to “Hazardous” Chemical Exposure (How Does One Determine the Hazards Associated with Specific Chemicals, Exposure Routes, Toxicity Risk Assessment), Personal Protective Equipment (PPE) Proper Attire (Eye/Face Protection, Lab Coats, Gloves, Respirators, Disposal/Removal of PPE), Emergency Equipment Safety Showers/Eye Washes, Key Campus and Department Chemical Safety Contacts, Case Study: Dartmouth Chemical Poisoning (Key Lessons learnt).

MODULE II: LABORATORY EMERGENCIES: SPILLS AND FIRES

Handling the Accidental Release of Hazardous Materials, Notifications, Spill Containment and Clean-up, Leaking Gas Cylinders, Fires Classification, Fire Extinguishers (how they work, types), Risk Assessment, Flammable Hazards, Flammability Characteristics, Flammability Classes, Causes of Ignition, Reactive Hazards, Explosives, Case Study: University of Texas Austin Sodium Fire (Key Lessons learnt).

MODULE III: CHEMICAL HAZARDS

Chemical Hygiene Plan, The New Safety Data Sheets (SDS) versus the Old Material Safety Data Sheets (MSDS), Assessment of Chemical Toxicity, Toxic Hazards (Dose, Risk Assessment, Types of Toxins, Working with Highly Toxic Compounds (General Considerations, Planning, Precautions for Minimizing Exposure – Handling, In the Event of a Spill), General Considerations (Chemical Segregation, Transfer and Transport, Chemical Fume Hoods (Safety, Types, Operation), Other Types of Ventilation) Case Study: University of Wisconsin – LiAlH_4 Explosion (Key Lessons learnt).

MODULE IV: MANAGING AND WORKING WITH CHEMICALS

Working with Flammable Substances (Standard Operating Procedures), Working with Highly Reactive or Explosive Substances, Working with Compressed Gases (Parts of the Cylinder, Cylinder Pressure Regulator, Storage Guidelines, Transporting Cylinders, Handling Compressed Gas Cylinders) Working with Cryogenics (Health Hazards, Liquid N_2), Waste Handling. Characterization of Waste. Collection and Storage (Lids, Leaks, Labels, Location, Containers), Consequences of Mixing Incompatibles, Solid Wastes (Chemicals, Broken Glass, Sharps, Cylinders). Waste Handling, Characterization of Waste, Collection and Storage (Lids, Leaks, Labels, Location, Containers), Consequences of Mixing Incompatibles Solid Wastes (Chemicals, Broken Glass, Sharps, Cylinders, Pick-up), Special Cases, Hazardous Waste Minimization, Case Study: the “UCLA Incident”.

MODULE V: WORKING ON LABORATORY EQUIPMENTS

Working with Water (liquid)-dependent Equipment (Hazards, Proper Use, Heating Baths), Working with High Pressure Vacuum Pumps, Working with Stirring and Mixing Devices, Working with Heating Devices (Variacs, Oil, Salt, Sand Baths, Microwave Ovens), Ultrasonicators, Centrifuges and HPLCs. Laser classifications, Effects of lasers on skin and eyes, Protective eyewear, Enclosing laser beams, Examples of common mistakes and ways to avoid them, Non-beam hazards, Risk Assessment: when is it okay to violate

Prof. (Dr.)  Kumar

Manesar Gurgaon-122413

specific safety rules? The importance of understanding, how things work, Case Study: Laboratory Equipment.

MODULE VI: BIOSAFETY, RADIATION, AND ANIMALS

Chemicals such as acrylamide & ethidium bromide, Pathogens, Biological waste handling, Recombinant DNA, Mammalian cell culture, Case Study.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

SPECTROSCOPY

Course Code: CHY4213

Credit Units: 03

Course Objective:

The course is designed to give students the basis of organic compound characterization. The student will be able to analyse and interpret spectroscopic data collected by the methods discussed in the course. They will be able to solve problems related to the structure, purity and concentration of chemicals and to study molecular interactions by choosing suitable spectroscopic methods and interpreting corresponding data.

Course Contents:

MODULE I: Ultra-violet and Visible Spectroscopy:

Principles of electronic spectroscopy, Absorption Law's, Type of electronic transitions, Effect of solvent on electronic transitions, Chromophores & Auxochromes, Ultraviolet bands of carbonyl compounds, unsaturated carbonyl compounds, dienes, conjugated polyenes. Fieser-Woodward rules for conjugated dienes and carbonyl compounds. Qualitative applications of UV-Vis spectroscopy.

MODULE II: INFRARED SPECTROSCOPY

Principle of IR spectroscopy, Modes of vibrations, Hook's law and calculation of frequency for different bonds. Fundamental vibrations and selection rule. Characteristic vibrational frequencies of common organic compounds. Effect of hydrogen bonding and solvent effect on vibrational frequencies, overtones, combination bands and Fermi resonance. Fingerprint region. Introduction to Raman spectroscopy. Applications of IR and Raman Spectroscopy in organic chemistry.

MODULE III: Nuclear Magnetic Resonance (NMR) Spectroscopy:

General introduction, chemical shift and factors effecting it, spin-spin coupling, shielding – deshielding mechanism, chemical and magnetic equivalence or non-equivalence chemical shift values and correlation of protons present in different groups in organic compounds. Proton exchange (proton on N, O and S atom), Karplus-relationship of coupling constant with dihedral angle. Simplification of complex spectra-by double resonance, contact shift reagents, D₂O shake. Nuclear Overhauser Effect (NOE). Determination of impurity by NMR, Principle and introduction to C-13 NMR, F-19, P-31, DEPT and 2-D NMR, Strcutrue determination by NMR.

MODULE IV: MASS SPECTROMETRY

Introduction, ion production—Electron ionization (EI), Chemical Ionization (CI), Fast atom bombardment (FAB) and Matrix Assisted Laser Desorption Ionization (MALDI), factors affecting fragmentation, ion analysis, and ion abundance. Mass spectral fragmentation of organic compounds, common functional groups, Molecular ion peak, Base peak, Isotopic peaks, Meta-stable peak, McLafferty rearrangement, ortho effect, Determination of molecular weight and molecular formula: Nitrogen Rule, hydrogen deficiency index. Introduction to GCMS, LCMS and HRMS. Combined structural elucidation problems based on IR, UV, NMR and mass spectral data.

ANALYTICAL CHEMISTRY LAB

Course Code: CHY4206

Credit Units: 02

Minimum 10 Experiments to be performed

Chromatography

1. Estimation of zinc and magnesium in the given mixture solution against EDTA (Disodium salt) solution
2. Thin-layer chromatography-separation of nickel, manganese, cobalt and zinc.
3. Separation and identification of the sugars present in the given mixture of glucose, fructose and sucrose by paper chromatography and determination of R_f values.
4. Separation of artificial colorants in confectionary using TLC.
5. Extraction and Determination of caffeine from tea leaves

Colorimetry

6. To verify Beer-Lambert's Law for potassium permanganate solution and hence to determine the molar extinction coefficient and unknown concentration of given sample colorimetrically
7. To verify the Beer-Lambert's Law and determine the concentration of given dye solution colorimetrically.
8. To estimate the amount of D-glucose in given solution colorimetrically.

Quantitative Analysis

9. Estimation of amines/phenols using bromate bromide solution/or acetylation method.
10. Determination of Iodine and Saponification values of an oil sample.
11. To determine the acid value of given oil
12. Determination of protein content of wheat flour.

***MSDS -Compilation of MSDS of chemicals used by students in each experiment is compulsory**

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, A: Attendance, V – Viva.

Suggested Readings:

INDUSTRIAL CHEMISTRY LAB

Course Code: CHY4207

Credit Units: 01

Minimum 10 Experiments to be performed

Analysis of Cement

1. Determination of silica content from given sample

Analysis of polymers

2. Determination of Acid Values of plastic material.
3. Determination of Saponification value of plastic material.
4. Determination Iodine value of a plastic material.
5. Determination of hydroxyl Value of plastic material.
6. Determination of Carbonyl Value of plastic material.
7. Determination of Molecular Weight of a polymer.
8. Determination of Capacity of cation exchange resin.
9. Determination Capacity of an anion exchange resin.
10. Determination of glass transition temperature of plastic.

Preparation of polymers

11. Preparation of Urea Formaldehyde resin and Phenol Formaldehyde resin.
12. To synthesize and hydrolyse Nylon 6:6/polyacrylic acid/polyamide

Water Analysis

13. Determination of Total dissolved solids
14. Determination of Carbonate and non-carbonate hardness by EDTA
15. Determination of Dissolved oxygen, BOD, COD
16. Determination of Turbidity

Preparation of Dyes (methyl orange, bismark brown)

Preparation of Cosmetics (shampoo, lipstick, detergent)

Preparation of Drugs (Paracetamol and Aspirin)

***MSDS -Compilation of MSDS of chemicals used by students in each experiment is compulsory**

Examination Scheme:

TERM PAPER

Course Code: CHY4231

Credit Units: 01

Objectives

The objective of this course is to judge the understanding as well as application of the knowledge gained by the students. The aim of the term paper is to provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking a significant practical unit of examining and analyzing various aspects of Chemistry & its application at a level commensurate with the learning outcomes of the various courses taken up them in the ongoing semester.

A term paper is primarily a record of intelligent reading in several sources on a particular subject. The students will choose the topic at the beginning of the session in consultation with the faculty assigned.

Guidelines:

1. The term paper will be related to the contemporary research issue and the topic will be given by the department.
2. The presentation of the term paper is scheduled to be held before the commencement of Semester examinations.
3. The paper will carry 100 marks that will be marked on the basis of understanding and organization of content based on the literature review. The Bibliography shall form an important part of the paper.
4. Examples of a few broad areas for term paper (List is indicative, not exhaustive)
 - Inorganic chemistry
 - Organic chemistry
 - Physical chemistry
 - Green chemistry
 - Agriculture chemistry

Evaluation Scheme

Organisation and relevance of content	Literature Review	Bibliography	Presentation	Total
30	30	20	20	100

NATURAL PRODUCTS AND HETEROCYCLIC CHEMISTRY

Course Code: CHY4325

Credit Units: 03

Course objective: The course provides an understanding of important natural products. Using selected examples, this course describes the process of identification and isolation of natural products from natural sources, their chemical synthesis and structure elucidation. The course gives a broad introduction to heterocyclic chemistry. Emphasis is given on the most important heterocyclic systems, such as coumarines, indoles, pyrimidines, imidazoles, aziridines and oxiranes etc. For each group, ring synthesis, chemical properties and characteristic reactions will be discussed.

Course Contents:

MODULE I: TERPENOIDS AND CAROTENOIDS

Classification, nomenclature, occurrence, isolation, general methods of structure determination, isoprene rule. Structure determination, stereochemistry and synthesis of the following representative molecules: Citral, α -Terpeneol and β -Carotene

MODULE II: ALKALOIDS

Definition, nomenclature and physiological action, occurrence, isolation, general methods of structure elucidation, degradation, classification based on nitrogen heterocyclic ring, role of alkaloids in plants. Structure, stereochemistry and synthesis of the following: Coniine, Nicotine, Atropine, and Quinine.

MODULE III: HETEROCYCLIC - I

Introduction, classification, nomenclature of three, four, five and six-membered rings. Methods of synthesis and chemical reactions of aziridines, oxiranes, thiiranes, azetidines, oxetanes. Methods of Synthesis and chemical reactions with emphasis on the mechanism of electrophilic substitution of pyrrol, thiophene and furan. Synthesis and reactions of pyridine with emphasis on nucleophilic substitution reactions.

MODULE IV: HETEROCYCLIC – II

Introduction to condensed five and six membered heterocycles; preparation and reactions of indole, quinoline and isoquinoline with special reference to Fischer-indole synthesis, Skraup synthesis and Bischler-Napieralski synthesis. Synthesis and chemical reactions of five membered ring with two heteroatoms; pyrazole, imidazole, oxazole, thiazole, isothiazole, and benzofused analogue like coumarins, thiocoumarins, phenazine, phenothiazines, 1,4 and 1,5-benzodiazepines.

DRUGS AND DYES

Course Code: CHY4304

Credit Units: 04

Course Objective: At the end of this course students must acquire a good knowledge about the various drugs their active constituents, their pharmacological actions and therapeutic uses. Beside drugs they will learn about various dyes used in day to day life, their properties and applications.

Course Content:

MODULE I: INTRODUCTION TO DRUGS

Definition of drug (WHO), classification of drugs, nomenclature of drugs, stereochemical aspects of drugs, definitions of terms commonly used in the chemistry of drugs, routes of drug administration and different dosage forms and applications

MODULE II: MECHANISM OF ACTION, STRUCTURE AND SYNTHESIS OF DRUGS

Sulphonamides : Sulphathiazole, Sulphadiazine (any two)
Antiseptics : Iodoform, Dettol
Antileprotic drugs : Dapsone (DDS), Acedapsone (DADDS)
Anticancer agents : Alkylating agents
Cardiovascular Drugs : Amyl nitrate, Methyldopa
Antipyretics & Analgesics: Novalgin, Paracetamol
Antimalarials : Chloroquine, Primaquine, Mepacrine
Anti diabetic : Tolbutamide
Antitubercular : p-amino salicylic acid, Ethambutol

MODULE III: INTRODUCTION TO DYES

Historical development of synthetic Dyes - Introduction, Nomenclature, classification based on structure & mode of applications of fibres. Structural features of a dye (chromophores and auxochromes), bathochromic and hypsochromic effects, diazotisation and coupling, colour and chemical constitution (Witt's theory, Armstrong theory and Modern theory). Dye intermediates- unit, batch & continuous process in the preparation of dye intermediates,

MODULE IV: STRUCTURE AND PREPARATION OF DYES

Nitro Dyes : Picric acid, Martius yellow, Naphthol yellow S
Nitroso Dyes : Fast green O, Naphthol green Y
Azo Dyes : Methyl orange, Methyl red, Congo Red
Phthaleins : Phenolphthalein
Phthalocyanines: Copper phthalocyanine
Xanthenes : Fluorescein, Eosin, Mercurochrome
Rhodamines : Rhodamine B
Thiazine Dyes : Methylene blue
Cyanine Dyes : Quinoline blue
Antraquinone Dyes: Alizarin
Indigoids : Indigo (Indigotin)
Thioindigos : Thioindigo
Azine Dyes : Safranin T

Action of light on dyes and dyed fibres, Factors affecting fastness of dyed fibres General consideration, fluorescence, phototropy, mechanism of fading.

ADVANCED NATURAL PRODUCTS CHEMISTRY

Course Code: CHY4305

Credit Units:03

Course Objective: The main idea of this course is to give the students details of natural product chemistry, which includes the study of Vitamins, alkaloids, terpenes and steroids etc. These play a key role in our day to day life. The course covers the importance of these naturally occurring materials and their applications in chemistry, biology and medicine. The course will also include the invited lectures on recent advances in natural product chemistry and it gives a reasonable good overview of the naturally occurring chemicals and their important reactions, their applications etc.

Course Content:

MODULE I: NATURAL PRODUCTS AND THEIR BIOSYNTHETIC PATHWAYS

General classification of natural products, their isolation and characterisation and biosynthesis of common plant products; Biosynthesis pathways for natural products using co-enzymes and enzymes; Synthesis of selected natural products based on genetic classification – fatty acid derivatives and related compounds, general biogenesis and synthesis of cis jasmone, methyl jasmonate, prostaglandins, exaltone and muscone.

MODULE II: VITAMINS

Vitamins: Classification, occurrence, chemistry of Vitamins A, C and E, structure elucidation and synthesis, deficiency syndromes,

MODULE III: ALKALOIDS

Alkaloids, definition, Isolation, Classification (define different categories of alkaloids with specific examples, their medicinal uses, synthesis). Drugs (cocaine, opiates, quinine, vincristine, curare, mescaline, etc.) and toxins (nicotine, lupinines, strychnine, tetrodotoxin, etc.). Introduction, 2. Simple Alkaloids I: Pyrrole Derivatives 3. Simple Alkaloids II: Piperidine Derivatives 4. Aromatic Alkaloids I: Simple Derivatives 5. Aromatic Alkaloids II: More Complex Derivatives 6. The Indole Alkaloids 7. Miscellaneous Alkaloids with Interesting Bioactivities.

MODULE IV: TERPENES AND STEROIDS

Classification and biosynthesis of mono-, sesqui-, di- and triterpenoids and steroids. Acetyl CoA, Mevalonic acid, acetoacetyl CoA, squalene to lanosterol, Cholesterol to estradiol, diosgenin and its utility in hormone synthesis.

MODULE V: GENERAL CHEMISTRY OF THE FOLLOWING COMPOUNDS

Cholesterol, Artemisinin, Gibberellin A₃, Azadirachtin.

Examination Scheme:

Components	CT	HA	S/V/Q	A	EE
Weightage(%)	15	5	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, A: Attendance EE: End Semester Examination

ADVANCED NANOCHEMISTRY

Course Code: CHY4308

Credit Units:03

Course Objective: This course is intended to give the students' knowledge of advances in nanochemistry and introduction to ionic liquids. This course will help the student understand superplasticity and its industrial Applications. A knowledge of introductory level nanochemistry is required.

Course Content:

MODULE-I: SIZE EFFECTS ON STRUCTURE AND MORPHOLOGY OF NANOPARTICLES

Fundamental Properties - Size Effects on Structure and Morphology of Free or Supported Nanoparticles - Size and Confinement Effects - Fraction of Surface Atoms - Specific Surface Energy and Surface Stress - Effect on the Lattice Parameter - Effect on the Phonon Density of States - Nanoparticle Morphology - Equilibrium Shape of a Macroscopic Crystal - Equilibrium Shape of Nanometric Crystals - Morphology of Supported Particles.

MODULE-II: SUPERPLASTICITY AND REACTIVITY OF METAL NANOPARTICLE

Superplasticity – Introduction – Mechanism - Superplastic Nanostructured Materials - Industrial Applications. Reactivity of Metal Nanoparticles - Size Effects-Structural Properties - Electronic Properties - Reactivity in Chemisorption and Catalysis of Monometallic Nanoparticles - Support Effects - Alloying Effects - Effect of Surface Segregation - Geometric Effects -Electronic Effects - Preparation and Implementation in the Laboratory and in Industry.

MODULE-III: SUPERCRITICAL FLUIDS

Supercritical Fluids –Introduction – Physicochemical Properties - Solubility - Viscosity - Diffusion - Thermal Conductivity - Applications - Purification and Extraction - Synthesis.

MODULE-IV: FEATURES OF NANOSCALE GROWTH

Specific Features of Nanoscale Growth – Introduction - Thermodynamics of Phase Transitions -Dynamics of Phase Transitions - Thermodynamics of Spinodal Decomposition - Thermodynamics of Nucleation – Growth - Size Control - Triggering the Phase Transition- Application to Solid Nanoparticles - Controlling Nucleation - Controlling Growth - Controlling Aggregation. Stability of Colloidal Dispersions - Breaking Matter into Pieces.

Examination Scheme:

Components	CT	HA	S/V/Q	A	EE
Weightage(%)	15	5	5	5	70

MEDICINAL CHEMISTRY

Course Code: CHY4310

Credit Units: 03

Course objective: This course is intended to provide students with chemical principles that are required to understand the action and behavior of drug compounds and hence the relationship between the structure and stereochemistry of a compound and its chemical and therapeutic properties, and thus the chemical considerations in drug design: size, physico-chemical properties and ADME (absorption, distribution, metabolism, and excretion).

Course Contents:

MODULE I: DRUG DEVELOPMENT

Drug development: Lead modification. (a) Identification of active part -Pharmacophore (b) Fundamental group modification (c) Structure-activity relationship (d) Structure modification to increase potency and therapeutic index (i) Homologation ii) Chain branching (iii) Ring chain transformations (iv) Bioisosterism. Drug development process: (a) Pre-formulation, product development (b) Preclinical studies; Acute toxicity, sub acute toxicity, chronic toxicity, LD₅₀, ED₅₀, pharmacodynamics, mutagenicity and reproductive studies.

MODULE II: PHARMACOKINETICS

Basic principles of pharmacokinetics including absorption, distribution, metabolism and excretion of drugs and metabolites in the human body, important pharmacokinetic parameters in defining drug therapeutics, mathematical approach to pharmacokinetic modeling.

MODULE III: PHARMACODYNAMICS

Introduction, elementary treatment of enzyme stimulation, enzyme inhibition, sulphonamides, membrane active drugs, drug metabolism, biotransformation, significance of drug metabolism in medicinal chemistry. Therapeutic index, explanation of quantal dose, graded dose, dose-effect curves, efficacy, potency, margin of safety

MODULE IV: ANTIBIOTICS

Definition, characteristics, classification, synthesis and therapeutic uses of Penicillin, Ampicillin, Amoxicillin, Chloramphenicol, Cephalosporin, Tetracycline and Streptomycin

Examination Scheme:

Components	CT	HA	S/V/Q	A	EE
Weightage(%)	15	5	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, A: Attendance EE: End Semester Examination

ENVIRONMENTAL CHEMISTRY

Course Code: CHY4321

Credit Units: 03

Course Objective: This course is intended to provide students with knowledge of key themes, theories and problems and describe important chemical reactions in the atmosphere and in water, including important chemistry in connection with air pollution, water pollution, and case studies of many environmental disasters.

Course Contents:

MODULE I: CHEMISTRY AND THE ENVIRONMENT

Chemistry and the environment - environmental pollution - causes - pollutants – air pollution - effects of air pollution: Environmental fate of pollutants – transformation process - bioconcentration - fate of air, water and soil pollutants

MODULE II: WATER POLLUTION

Water pollution - water quality parameters - turbidity, colour, pH, acidity, alkalinity, solids, hardness, chlorides, residual chlorine, sulphates, fluorides, phosphates, iron and manganese, DO, BOD, COD, nitrogen, grease, volatile acids, gas analysis.

MODULE III: INDUSTRIAL POLLUTION

Cement, sugar, distillery, drug, paper and pulp, thermal power plants, nuclear power plants, metallurgy. Polymers, drugs etc.

Environmental disasters – Chernobyl, Three Mile Island, Seveso and minamata disasters, Japan tsunami

MODULE IV: BIOLOGICAL ACTIVITY

Biological activity - biodegradation of carbohydrates, proteins, fats and oil, detergents, pesticides; Metabolic fate of pollutants - adsorption – distribution - metabolism - excretion.

MODULE V: ENVIRONMENTAL TOXICOLOGY

Toxic heavy metals: Mercury, lead, arsenic and cadmium, Causes of toxicity. Bioaccumulation, sources of heavy metals, Chemical speciation of Hg, Pb, As, and Cd. Biochemical and damaging effects. Toxic Organic Compound: Pesticides, classification, properties and uses of organochlorine and ionospheres pesticides detection and damaging effects.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

POLYMER TECHNOLOGY

Course Code: CHY4311

Credit Units:03

Course objective: This course is designed to familiarize students with the various polymer characterization and manufacturing techniques for converting polymer feed stocks into plastic end products. It involves a study of various plastics processing techniques. Students will become familiar with specialty polymers and their industrial uses, and design factors to create materials with desirable end-use properties

Course Contents:

MODULE I: POLYMER PROCESSING

Plastic Technology: Extrusion, injection molding, blow molding, compression molding, thermoforming, rotational molding, casting. Fiber Technology- Textile and fabric properties, spinning, fiber after-treatments. Elastomer Technology- Vulcanization, reinforcement, elastomer properties and compounding. Recycling of polymers Classification of polymer recycling processes. Waste polymer recovery, sortation, microsortation, polymer reprocessing and Polymer incineration

MODULE II: POLYMER BLENDS AND ALLOYS

Definition, Polymer Blends, compatibilisation, Polymer Blends, Industrial applications of polymer blends.

MODULE III: SPECIALTY POLYMERS

Liquid Crystal Polymers (LCP): Smectic, nematic, cholestric crystals, thermotropic main chain LCP, side chain LCP, chiral nematic LCP, properties of commercial LCP's. Electroactive polymers: Filled polymers, conducting polymers- doping, conducting mechanism, EMI shielding, applications- rechargeable batteries, sensors, photoconductive polymers. Ionic Polymers: Ionic crosslinking, ion exchange, hydrophilicity, ionomers, polyelectrolytes, applications, Synthetic Polymeric membranes- membrane preparation, membrane modules, applications, High temperature and fire resistant polymers, Hydrogels, smart polymers, Dendritic polymers- their applications. Biomedical polymers: Contact Lens, Dental Polymers, Artificial heart, Kidney and skin cells Biobased polymers: PLA, PCL

Examination Scheme:

Components	CT	HA	S/V/Q	A	EE
Weightage(%)	15	5	5	5	70

NON-CONVENTIONAL ENERGY SOURCES

Course Code: CHY4312

Credit Units:03

Course Objective: A detailed exposition of the course for the student, opting for Applied Chemistry is so vitally important for a clear understanding of recent intricate theories of non-conventional sources of energy.

Course Contents:

MODULE I: SOLAR ENERGY

Heat Transfer in Renewable Energy Systems - conduction, convection and radiation, Heat transfer and engineering concepts to the renewable energy systems, Role and potential of new and renewable source, the solar energy option, Environmental impact of solar power, physics of the sun, Spectral distribution, the solar constant, radiation on tilted surface/earth, instruments for measuring solar radiation. Application of solar energy and solar photovoltaic system

MODULE II: BIO-GAS

Raw materials, Properties/characteristics of bio gas, Principles of Bio-Conversion; Photosynthesis, Anaerobic/aerobic digestion, types of Bio-gas digesters, gas yield, combustion, Transportation of bio gas, bio gas plant technology & status, Biomass cogeneration Energy recovery from urban waste, Power generation from liquid waste, Bio gas applications.

MODULE III: GEOTHERMAL AND WIND ENERGY

Structure of earth's interior, earthquakes & volcanoes, Geothermal resources, Hot springs, Steam ejection, Principal of working, Types of geothermal station with schematic representation, Applications. Properties of wind, Availability of wind energy in India, wind velocity, Wind machine fundamentals; types of wind machines and their characteristics, Horizontal and Vertical axis wind mills, Elementary design principles, Coefficient of performance of a wind mill rotor, Aerodynamic considerations in wind mill design, Recent development and applications.

MODULE IV: OCEAN AND HYDROGEN ENERGY

Principle of ocean thermal energy conversion (OTEC), setting of OTEC plants, thermodynamic cycles. Tidal and wave energy: Fundamentals of tidal power, Potential and conversion techniques, mini-hydel power plants. Use of tidal energy, Limitations of tidal energy conversion systems. Properties of hydrogen in respect of it's use as source of renewable energy, Sources of hydrogen, Production of hydrogen; electrolysis of water, thermal decomposition of water, thermo chemical production bio-chemical production. Applications of hydrogen energy.

Examination Scheme:

INDUSTRIAL WASTE AND WATER TREATMENT

Course Code: CHY4313

Credit Units:03

Course Objectives: This course will give the basic understanding of the chemical principles involved in water and wastewater treatment. It presents the basic chemistry and treatment methodologies used in drinking water and wastewater operations. The students would be able to characteristics and treatment of industrial waste, advanced methods of treatment waste and disposal, reuse and recovery of waster from various industries. A brief introduction to environmental Impact assessment has also been added to create general awareness.

Course Contents:

MODULE I: AN INTRODUCTION TO SOURCE, CHARACTERISTICS AND TREATMENT OF INDUSTRIAL WASTE

Undesirable waste characteristics, sources and characteristics of waste water, industrial waste survey, waste characteristics - estimation of organic content, water reuse and in-plant waste control, idea of different technologies for the treatment of industrial waste water and the basis for the selection of treatment technology.

MODULE II: TREATMENT OF INDUSTRIAL WASTES

Different steps in the treatment of industrial waste (equalization, neutralization, sedimentation, oil separation, flotation, coagulation), sources and removal of heavy metals e.g. As, Ba, Cd, Cu, F, Fe, Rb, Mn, Hg, Ni, Se, Ag & Zn)

MODULE III: ADVANCE WATER TREATMENT OF INDUSTRIAL WASTE

Aeration, air stripping of volatile organics (VOC), biological oxidation - removal of organics (sorption, stripping, biodegradation), nitrification and de-nitrification. Lagoons and stabilization basins, membrane processes, trickling filtration, adsorption, ion exchange, chemical oxidation, sludge dewatering and disposal.

MODULE IV: WASTE WATER REUSE AND RECOVERY

Treatment, disposal, reuse and recovery of trade waste from (1) Textile Manufacture (2) Distilleries (3) Sugar (4) Paper and Pulp mills (4) Tanneries (5) Food Processing industries (6) Fertilizer Industry.

MODULE V: ENVIRONMENTAL IMPACT ASSESSMENT

Introduction to EIA, impact assessment methodologies, environmental inventory, environmental impact assessment (planning and management), environmental indices and indicators for describing the affected environment, EIA guidelines, introduction to environmental impact statement.

Examination Scheme:

Components	CT	HA	S/V/Q	A	EE
Weightage(%)	15	5	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, A: Attendance EE: End Semester Examination

NUCLEAR CHEMISTRY

Course Code: CHY4314

Credit Units: 03

Course Objective: This course is designed to provide basic information of Radiation and Nuclear chemistry; requirements, methods of preparation, uses of Radioelements. This should improve a student's knowledge of types of radioactive decay, natural decay series, nuclear models, nuclear properties, instrumentation and Introduction to health

Course Contents:

MODULE I: INTRODUCTION TO RADIOACTIVITY

Discovery of radioactivity, α , β and γ radiations, the radioactive series, radioactive decay, modes of decay, the n/p ratio, odd even rule, artificial radioactivity, transmutation of elements, the G.M counter

MODULE II: CHEMISTRY OF RADIOACTIVE ELEMENTS

Positions of radioactive elements in periodic table, trans-uranides and trans-actinides, super heavy elements; nomenclature & predicted chemistry, the Seaborg model, radiation dosimetry, radiolysis of aqueous solutions

MODULE III: USES OF NUCLEAR ISOTOPES

Introduction to nuclear medicine, positron emission tomography (PET), radiocarbon dating and its uses, nuclear reactors, uses of heavy water in nuclear reactors, Trace analysis of elements and compounds - neutron activation analysis, isotope dilution analysis. Nuclear waste and its environmental effect

MODULE IV: NUCLEAR MODELS

Liquid-drop model, electron shell model, nuclear reactions, fission and fusion, cold fusion, idea about nuclear spin and its application in NMR, nuclear splitting, Zeeman effect and Stark effect (only definition and qualitative explanation)

Examination Scheme:

Components	CT	HA	S/V/Q	A	EE
Weightage(%)	15	5	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, A: Attendance EE: End Semester Examination

Suggested Readings:

FOOD TECHNOLOGY

Course Code: CHY4315

Credit Units:03

Course objective: The contents have been drawn-up to accommodate the widening horizons of the discipline of Food Technology. They reflect the current changing needs of the students. This will create awareness among the students about the fundamentals of food and nutrition science involved in our everyday life

Course Contents:

MODULE I: INTRODUCTION TO FOOD

Carbohydrates: Structure and functional properties of mono- oligo-polysaccharides including starch, cellulose, pectic substances and dietary fibre; Proteins: Classification and structure of proteins in food; Lipids: Classification and structure of lipids, Rancidity of fats, Polymerization and polymorphism; Pigments: Carotenoids, chlorophylls, anthocyanins, tannins and myoglobin; Food flavours: Terpenes, esters, ketones and quinones; Enzymes: Specificity, Kinetics and inhibition, Coenzymes, Enzymatic and non-enzymatic browning; Nutrition: Balanced diet, Essential amino acids and fatty acids, PER, Water soluble and fat soluble vitamins, Role of minerals in nutrition, Antinutrients, Nutrition deficiency diseases.

MODULE II: FOOD MICROBIOLOGY

Characteristics of microorganisms; Microbial growth in food: Intrinsic and extrinsic factors, Growth and death kinetics, serial dilution method for quantification; Food spoilage: Contributing factors, Microbial spoilage of milk and milk products, meat and meat products; Foodborne disease: Toxins; Fermented food: Buttermilk, yoghurt, cheese, sausage, alcoholic beverage, vinegar, sauerkraut and soya sauce.

MODULE III: FOOD PRODUCTS TECHNOLOGY

Processing principles: Canning, chilling, freezing, dehydration, control of water activity, CA and MA storage, fermentation, hurdle technology, addition of preservatives and food additives, Food packaging, cleaning in place and food laws; Grain products processing: Milling of rice, wheat, and maize, production of bread, biscuits and breakfast cereals, Solvent extraction, refining and hydrogenation of oil; Milk and milk products processing: pasteurized and sterilized milk, cream, butter, ghee, ice-cream, cheese and milk powder; Animal products processing

MODULE IV: FOOD CHEMICAL ENGINEERING

Mass and energy balance; Momentum transfer: Flow rate and pressure drop relationships for Newtonian fluids flowing through pipe, Characteristics of non Newtonian fluids - generalized viscosity coefficient and Reynolds number, Flow of compressible fluid, Flow measurement, Pumps and compressors; Heat transfer: Heat transfer by conduction, convection, radiation, boiling and condensation, heat exchangers; Mass transfer: Molecular diffusion and Fick's Law, Steady state mass transfer, Convective mass transfer;

MODULE V: FOOD MECHANICAL ENGINEERING

Mechanical operations: size reduction of solids, high pressure homogenization, filtration, centrifugation, settling, sieving, flow through porous bed, agitation of liquid, solid-solid mixing, and single screw extrusion; Thermal operations: Energy requirement and rate of operations involved in process time evaluation in batch and continuous sterilization, evaporation of liquid foods, hot air drying of solids, spray and freeze-drying, freezing and crystallization.

RENEWABLE ENERGY CONVERSION SYSTEMS

Course Code: CHY4322

Credit Units: 03

Course Objective:

Course provides an introduction to different renewable energy sources. It analyses the full range of renewable energy supplies needed for modern economies. The course includes power from sun, wind, bio, tidal, ocean, geo and hydro.

Course Contents:

Module I: Introduction to Renewable Energy

Renewable and Non-Renewable Energy, World energy scenario; Fossil fuel resources - estimates and duration; India's energy scenario; Synergy between energy and environment, global environment issues, greenhouse gas emission, global warming, green energy solutions, technical and social implications of renewable energy

Module II: Solar Concepts

Introduction, Sun as the source of radiation, Earth and Solar constant, Extra-terrestrial solar radiation, components of radiation, effects of earth's atmosphere, Introduction to solar PV, Introduction to solar Thermal.

Module III: Biofuels, Wind Energy

Biofuels- Definition, generations and types

Wind-Characteristics, Sources of wind, components of wind turbines, advantages and environmental aspects of wind energy

Module IV: Hydro Energy, Tidal Energy

Hydro- Principles, hydro-turbines, social and environmental aspects

Tidal- The nature of the resource, physics, power generation, technical factors, environmental factors, tidal energy potential, tidal barrage, tidal stream, tidal current turbines.

Module V: Geothermal, OTEC

Geothermal- Principles, suitable sites and criteria, Advantages and disadvantages,

OTEC- Principles, Open and closed systems.

Examination Scheme:

Components	CT	Assignment	V/Q	Attendance	EE
Weightage (%)	15	5	5	5	70

Suggested Readings:

- Renewable energy resources – J. W. Twidell
- Renewable energy engineering and technology-edited by V. V.N. Kishore
- Wind Energy Comes of Age, Paul Gipe, John Wiley & Sons Inc.
- Directory, Indian Windpower 2004, CECL, Bhopal.
- Solar Energy: Fundamentals, design, modeling and applications, Authored by G. N. Tiwari

INORGANIC CHEMISTRY LAB

Course Code: CHY4324

Credit Units:02

(Minimum 10 experiments to be performed)

Quantitative and Qualitative Analysis of following:

1. Ores analysis (oxides and carbonate ores)
2. Nickel/Copper

Estimation of following:

3. Active CaO in lime
4. Chlorine in bleaching powder
5. Lead content in red lead

Preparation and Characterizations/study by spectral methods

6. Trialkoxyboanes.
7. Tin (IV) chloride
8. Sodium tetrathionate
9. Cr (III) complexes. $[\text{Cr}(\text{H}_2\text{O})_6]\text{NO}_3 \cdot 3\text{H}_2\text{O}$, $[\text{Cr}(\text{H}_2\text{O})_4\text{Cl}_2]\text{Cl} \cdot 2\text{H}_2\text{O}$, $[\text{Cr}(\text{en})_3]\text{Cl}_3$, $[\text{Cr}(\text{acac})_3]$.
10. Fe(II) chloride and its application as catalyst in Friedel-Craft reaction
11. Ferrocene
12. Kinetic study of Cr(III) with a multidentate ligand (EDTA)

Qualitative Inorganic Semi-micro Analysis

13. Detection of atleast four cations and anion in a mixture of salts.

*MSDS -Compilation of MSDS of chemicals used by students in each experiment is compulsory

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, A-Attendance, V – Viva.

Suggested Readings:

- G.H.Jeffery, J.Bassett, J.Mendham and R.C.Denney Vogel's Text book of quantitative chemical analysis, ELBS 5th Edn. Longman, Singapore Publishers, Singapore, 1996.

SUMMER INTERNSHIP / STUDY ABROAD PROGRAMME

Course Code: CHY4335

Credit Units: 6

Objectives

The objective of this course is to judge the understanding as well as application of the knowledge gained by the students. The aim of the internship is to provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking a significant practical unit of examining and analyzing various aspects of Chemistry & its application at a level commensurate with the learning outcomes of the various courses taken up them in the ongoing semester.

A summer internship is primarily a record of intelligent reading and research on a particular subject. The students will choose the topic at the beginning of the session in consultation with the faculty assigned.

Guidelines:

1. The internship will be related to the contemporary research issue and the topic will be given by the department.
2. The presentation of the term paper is scheduled to be held before the commencement of Semester examinations.
3. The paper will carry 100 marks that will be marked on the basis of understanding and organization of content based on the literature review. The Bibliography shall form an important part of the paper.
4. Examples of a few broad areas for term paper (List is indicative, not exhaustive)
 - Inorganic chemistry
 - Organic chemistry
 - Physical chemistry
 - Green chemistry
 - Agriculture chemistry

Marking Scheme:

Committee (50)			Supervisor's Assessment: Regularity and Quality of Work (50)	Total (100)
Presentation: Contents + Delivery (20)	Viva: (Q & A) (20)	Dissertation: Content + Formatting (10)		

Evaluation component of the Supervisor is 50% and the remaining 50% by committee

MAJOR PROJECT

Course Code: CHY4437

CreditUnits: 10

GUIDELINES FOR PROJECT FILE AND PROJECT REPORT

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critically analyzed by the faculty guide and corrected by the student at each stage.

PROJECT FILE

The Project File may be a very useful tool for undertaking an assignment along-with a normal semester, an exploratory study, sponsored projects, a project undertaken during summer period or any other period as per curriculae where the researcher is working with a company/organization. The project/ assignment may also be a part of the bigger research agenda being pursued by a faculty/ institution/ department. The Project File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation. This file may be considered in continuous assessment.

In general, the File should be comprehensive and include:

- A short account of the activities that were undertaken as part of the project;
- A statement about the extent to which the project has achieved its stated objectives;
- A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;
- Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;
- Any problems that have arisen and may be useful to document for future reference.

PROJECT REPORT

The Project Report is the final research report that the student prepares on the project assigned to him. In case of sponsored project the lay out of the project could be as prescribed by the sponsoring organization. However, in other cases the following components should be included in the project report:

➤ Title or Cover Page

The title page should contain Project Title; Student's Name; Programme; Year and Semester and Name of the Faculty Guide.

➤ Acknowledgement(s)

Acknowledgment to any advisory or financial assistance received in the course of work may be given. It is incomplete without student's signature.

➤ Abstract

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project. It should not exceed more than 1000 words.

➤ Table of Contents

Titles and subtitles are to correspond exactly with those in the text.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

➤ **Introduction**

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

➤ **Materials and Methods**

This section should aim at experimental designs, materials used (wherever applicable). Methodology should be mentioned in details including modifications undertaken, if any. It includes organization site(s), sample, instruments used with its validation, procedures followed and precautions.

➤ **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing this section, emphasis should be laid on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary, do not write in “point” form.

While presenting the results, write at length about the the various statistical tools used in the data interpretation. The result interpretation should be simple but full of data and statistical analysis. This data interpretation should be in congruence with the written objectives and the inferences should be drawn on data and not on impression. Avoid writing straight forward conclusion rather, it should lead to generalization of data on the chosen sample.

Results and its discussion should be supporting/contradicting with the previous research work in the given area. Usually one should not use more than two researches in either case of supporting or contradicting the present case of research.

➤ **Conclusion(s) & Recommendations**

A conclusion should be the final section in which the outcome of the work is mentioned briefly. Check that your work answers the following questions:

- Did the research project meet its aims (check back to introduction for stated aims)?
- What are the main findings of the research?
- Are there any recommendations?
- Do you have any conclusion on the research process itself?

➤ **Implications for Future Research**

This should bring out further prospects for the study either thrown open by the present work or with the purpose of making it more comprehensive.

➤ **Appendices**

The Appendices contain material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

➤ **Suggested Readings:**

Suggested Readings: should include papers, books etc. referred to in the body of the report. These should be written in the alphabetical order of the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised

Examples:

For research article:

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infect*, **8** (suppl 1): 116–117.

For book:

Kowalski, M. (1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63-67

The Layout Guidelines for the Project File & Project Report:

- A4 size Paper
- Font: Arial (10 points) or Times New Roman (12 points)
- Line spacing: 1.5
- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

ASSESSMENT OF THE PROJECT FILE AND THE PROJECT REPORT

Essentially, the assessment will be based on the quality of the report, the technical merit of the project and the project execution. Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project. Project execution is concerned with assessing how much work has been put in.

The Project should fulfill the following *assessment objectives*:

- Range of Research Methods used to obtain information
- Execution of Research
- Data Analysis (Analyze Quantitative/ Qualitative information)
- Quality Control
- Conclusions

Assessment Scheme:**Continuous Evaluation:**

40% (Based on punctuality, regularity of work, adherence to plan and methodology, refinements/mid-course corrections etc. as reflected in the Project File.)

Final Evaluation:

60% (Based on the Documentation in the file, Final report layout, analysis and results, achievement of objectives, presentation/ viva)

It is recommended that the Final evaluation should be carried out by a panel of evaluators.

GOOD LABORATORY PRACTICES SEMINAR

Course Code: CHY4408

Credit Units: 01

Objectives

The aim of the term paper is to provide the students with an opportunity to further enhance their knowledge of good laboratory practices. Undertaking this very significant practical unit of examining and analyzing various aspects of Chemistry. Good laboratory practice or GLP is a set of principles intended to assure the quality and integrity of non-clinical laboratory studies that are intended to support research or marketing permits for products regulated by government agencies. The term GLP is most commonly associated with the pharmaceutical industry and the required non-clinical animal testing that must be performed prior to approval of new drug products. However, GLP applies to many other non-pharmaceutical agents such as color additives, food additives, food contamination limits, food packaging, and medical devices.

GLP is a quality management system, not a scientific management system. Or, in other words, GLP defines a set of quality standards for study conduct, data collection, and results reporting. GLP does not define scientific standards. If a study follows GLP, then you can be reasonably sure that the reported results were collected as outlined in the study protocol; however, you cannot be sure that the study actually addresses the scientific hypothesis. In the world of cooking, GLP would ensure that someone follows the recipe exactly as written; however, it does not assure you that the recipe was good or that the resulting item will be tasty!

The student is expected to attend the Good Laboratory Practices Seminar's diligently. The student will be tested on the basis of understanding and organization of content based on the seminar.

Evaluation Scheme

Attendance	Active Participation/ Write up	Multiple Choice Questions/ Quiz	Solving the case/ Assignment	Total
10	30	35	25	100

CHEMISTRY OF NANOMATERIALS

Course Code: CHY4407

Credit Units: 02

Course objective: Material science plays a vital role in this modern age of science and technology. The rapid development in the field of nanomaterials and composite science has opened vast opportunities for better understanding and utilization of various materials. The course curriculum is designed to give students an idea of the detailed aspects of important topics of material science like composites, nanomaterials, their synthesis, characterization, and application.

Course Contents:

MODULE I: INTRODUCTION TO CHEMISTRY OF MATERIALS & NANOMATERIALS

Materials & their classification; Classifications of nanostructured materials; Fundamental differences between bulk materials and nanomaterials; Role of chemistry in material design, Nanoscale Science and Technology-Implications for Physics, Chemistry, Biology and Engineering; Length Scales involved and effect on properties: Mechanical, Electronic, Optical, Magnetic, and Thermal properties.

MODULE II: SYNTHESIS TECHNIQUES FOR NANOMATERIALS AND THEIR CHARACTERIZATION

Bottom-UP Approach: Self-Assembly, Sol-Gel Synthesis, Hydrothermal growth, Thin Film Growth – Physical Vapour Deposition, Chemical Vapour Deposition

Top-Down Approach: Emulsification-Diffusion Solvent Diffusion/Evaporation Method, Ball Milling, Microfabrication, Lithography

Characterization techniques: X-ray diffraction technique, Scanning Electron Microscopy, Transmission Electron Microscopy, Atomic Force Microscopy, particle size analyzer.

MODULE III: APPLICATION OF MATERIAL CHEMISTRY & NANO CHEMISTRY

Application of organic and inorganic nanoparticles; biomedical applications: design of nanoparticles for oral delivery of peptide drugs, development of nanoscaffolds for tissue engineering and regenerative medicine, bioimaging with quantum dots.

Industrial applications: Nanotechnology in packaging industries, textiles, solar cells, space exploration, computing and information technology; electrical conductive carbon nanotube (CNT) dispersed Si_3N_4 ceramics.

INTRODUCTION TO POLYMERIC MATERIALS

Course Code: CHY4405

Credit Units:03

Course Objective: The curriculum is developed to help the students to understand the importance of polymeric materials and their usefulness in day to day life. The Polymeric materials course aims to provide students with an understanding of the different kinds of polymers, their preparation, polymerization and chemical bonding between them. It also covers the applications of these polymeric materials in plastics, elastomers

Course Content:

MODULE I: INTRODUCTION TO POLYMER

History and Concept of macromolecules, monomers with specific example viz. acrylonitrile, vinyl, chloride, methyl methacrylate, isobutylene, isoprene, styrene, hexamethylene diamine and adipic acid, caprolactum, ethylene oxide and sebacic acid, ethylene glycol and terephthalic acid, functionality, Degree of polymerization, Classification of polymers depending on – (a) The origin (natural, Semisynthetic, synthetic etc. (b) The structure (linear, branched, network, hyperbranched, dendrimer (c) The formation (condensation, addition)(d) Homopolymers, copolymers(e) The behaviour on application of heat and pressure (thermoplastic and Thermosetting)(f) The form and application (plastics, fiber. elastomers and resin(g) Stereoisomers: Isotactic, Syndiotactic, Atactic, Organic and Inorganic polymers. Concept of molecular mass, polydispersity, number average and weight average, molecular weight distribution in linear polymers.

MODULE II- CHEMISTRY OF POLYMERIZATION (MECHANISM)

chain polymerization- Free radical, Ionic and coordination mechanism, Common features of two types of Mechanism of cationic polymerization and anionic polymerization, Mechanism of coordination polymerization – Ziegler-Natta catalysts, Ring opening polymerization-mechanism of polymerization of cyclic ethers, cyclic amides and cyclosiloxanes.

MODULE III- METHODS OF POLYMERISATION

Methods of polymerization. Bulk polymerization, Solution polymerization, Emulsion polymerization, Suspension polymerization, Melt polycondensation. Controlled polymerization methods, viz, Nitroxide mediated polymerization (NMP), Atom Transfer Radical Polymerization (ATRP), Reversible Addition Fragmentation Termination (RAFT).

MODULE IV-SPECIAL POLYMERS AND THEIR APPLICATIONS

Polyethylene (LLDP, HDP, LLDPE and HDPE), PVC, polyvinyl alcohol, polyvinylacetate, polybutadiene, polychloroprene, polystyrene, polyacrylate, PMMA, and acrylonitrile copolymers. polyamides (Nylon 6, Nylon 6,6, Nylon 6,10), polyesters (poly ethylene terephthalate (PET), polybutylene, terphthalate (PBT), aromatic polyesters), polycarbonate, polyurethanes – Flexible and rigid polyurethane, polyurethane elastomers, coatings, adhesives, sulphur, containing polymers, polyimides, polyethersulphones, polyetherketones. Thermosetting resins – phenolic resins, amino resins, epoxy resins, silicone polymers, and cyanate ester resins.

MODULE V- POLYMER DEGRADATION

Introduction, Types of degradation-Thermal, mechanical, Photodegradation, oxidative degradation, Hydrolytic degradation, Degradation by ultrasonic waves and high energy radiation.

FCH4103	FORENSIC PHYSICS	L	T	P	C
Version 1.1	Date of Approval: Dec, 2021	2	0	0	2
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

This course is intended to give insight of providing the basic knowledge about the physical evidence and its forensic applications. The students will be able to correlate the speed of vehicle in hit-n-run cases with skid marks analysis and paint examination. The course will help the students to differentiate between different fractures of glass.

Course Objective:

This course will cover:

1. Important physical evidences found at crime scene.
2. General characteristics and identification of physical evidences.
3. Examination and evidential value of important physical evidences.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Analyse the soil as evidence and to define the significance of its types, particle size and density in crime cases.
- CO2. Identify and differentiate between various types of glasses and fractures.
- CO3. Explain the importance of paint as evidence and its significance in hit-n-run cases.
- CO4. Analyse the types of Tool marks and restoration of erased/ obliterated marks and their lifting and comparison.
- CO5. Apply the analysis techniques like chromatography and spectroscopy for physical evidences.

Course Contents	Blooms level*	Number of hours
Module I: Soil Formation and types of soil, composition of soil, particle size distribution, composition and analysis of concrete, cement, and its types.	L1, L2	7
Module II: Glass Types of glass and their composition, Forensic examination of glass fractures, determination of direction of impact: cone fracture, rib marks, hackle marks, concentric and radial fractures.	L1, L2, L3, L4	7
Module III: Paint Types of paint and their composition, macroscopic and microscopic studies, pigment distribution, micro-chemical analysis. Importance of paint evidence in hit and run cases; Importance of fiber evidence; Forensic gemology	L1, L2, L3, L4	7
Module IV: Tool Marks & Restoration of Erased / Obliterated Marks Types of tool marks: compression marks, striated marks, combination of compression and striated marks, repeated marks, class characteristics and individual characteristics, tracing and lifting of marks.	L1, L2, L4	7

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module V: Analysis Techniques Soil: microscopic examination, density gradient analysis, interpretation of soil evidence Glass: colour and fluorescence, physical matching, refractive index, and interpretation of glass evidence. Paint: Pyrolysis Chromatographic techniques, IR spectroscopy and Raman spectroscopy, interpretation of paint evidence, solubility test, Thin layer chromatography Tool Marks: Photographic examination of tool marks. Method of making-cast, punch, engrave; methods of obliteration, method of restoration.	L1, L3, L4	8
--	------------	---

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

Modes of Evaluation: Quiz/Assignment/ Seminar/Written Examination

FCH4106	FORENSIC BALLISTICS	L	T	P	C
Version 1.1	Date of Approval: Dec, 2021	2	1	0	3
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

The course is designed to provide basic and analytical knowledge of the firearms, types, firing range and the analysis of the GSR components.

Course Objective: - The objectives of the course:

1. To understand the basics of the projectile motion, ballistics, and role of ballistics in Forensic Science
2. Classification of different types of firearms and explosives.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Explain the history and types of Firearms
- CO2. Describe various types of ammunition
- CO3. Explain about the Internal and External ballistics.
- CO4. Restate the concept of linkage of bullets and Cartridge Cases.
- CO5. Describe the Gun Shot Residue and determination of range of firing.

Course Contents	Blooms level*	Number of hours
Module I: Introduction to Ballistics: Definition and scope, Firearms, Indian Arms Act, Types of evidences associated, History and mechanism of Muzzleloaders (Match lock, Wheel lock, Flint lock firearms), Briefs of Pinfire, Rimfire and Centrefire systems of cartridge, Characteristic features of the firearms, various types of modern firearms, classification of firearms on different basis, bore characteristics Different parameters of classification of firearms, Introduction to Shotgun, Revolver, Pistol, Rifle and Country Made/ Improvised Firearms. Proof marks of weapons.	L1, L2	7
Module II: Firearm Ammunition: Ammunition Components of Shotgun and Rifled firearm cartridges, Headstamp markings on ammunition. Various types of bullets and their compositional aspects, latest trends in their manufacturing and design, smooth bore, and improvised ammunition.	L1, L2, L3, L4	7
Module III: Internal and external Ballistics: Internal Ballistics: Definition, shapes and manner of Propellant burning, Muzzle velocity and Factors affecting muzzle velocity, ballistic coefficient, phenomenon of ricochet External Ballistics: Definition- Bullet Trajectory and factors affecting bullet flight. Wound Ballistics: Definition of wound ballistics, Ballistic aspect of firearm injuries, significance of studying cavitations in body, Bullet Entry/Exit Hole Identification, Evaluation of accident, suicide, homicide	L1, L2, L3, L4	7

Prof. (Dr.) Anil Kumar

firearm injuries.		
Module IV: Bullet linkage: Different types of marks produced during firing process on bullet-number/direction of lands and grooves, width of lands and depth of grooves, angle and pitch of rifling, striation marks on lands and grooves, techniques for obtaining test material from various types of weapons and their linkage with fired ammunition, class, and individual characteristics.	L1, L2, L4	8
Module V: Range of Firing determination: Introduction and methods of estimation. Gunshot Residue: Introduction and methods of analysis. Bullet and Cartridges matching: Ejecta, burning, scorching, blackening, tattooing and metal fouling, shots dispersion and GSR distribution, time of firing – different methods employed, and their limitations, stereo & comparison microscopy, automatic bullet, and cartridge comparison.	L1, L3, L4	7

FCH4107	FORENSIC PHYSICS – LAB	L	T	P	C
Version 1.1	Date of Approval: Dec, 2021	0	0	4	2
Pre-requisites/Exposure					
Co-requisites					

Catalog Description:

The course includes the analytical techniques for physical evidences like soil, glass, paints etc. The course has practical of casting of tyre marks and shoeprints, comparison of bangles and fibres.

Course Objective: The students will understand & perform experiments relating to:
Examination of physical properties of physical evidences commonly encountered at the crime scene.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Examine physical evidences (soil) by different analytical methods
- CO2. Examine physical evidences (Glass) by different analytical methods
- CO3. Perform comparative analysis of paints by TLC
- CO4. Cast of different marks and analyse fibres and bangles.

Course Contents: Lab/ Practical	Blooms level	Number of hours
1. Examination of physical properties of Soil by microscopy 2. Solubility test for paints and soil 3. Size distribution analysis of soil particles. 4. Mineral test for soil	L1, L3, L4	12
5. Examination of physical properties of Glass by microscopy 6. Comparative analysis of Glass fragments/ examination of glass fractures	L1, L3, L4	8
7. Comparative analysis of paints by TLC	L1, L3, L4	6
8. Casting of tyre marks 9. Casting of shoeprints	L1, L3, L4	10

FCH4108	CRIME SCENE INVESTIGATION (CSI) – LAB	L	T	P	C
Version 1.1	Date of Approval: Dec, 2021	0	0	4	2
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

This course is intended to provide basic knowledge of practical aspects of analysis and reconstruction of crime scene to the students. The students will understand the basic requirements for the crime scene investigation. They will understand the significance of crime scene sketching and photography. The course will help the student to understand proper collection and preservation of the evidence and their presentation in court of law.

Course Objective: The course focuses on following objectives-

- Developing an understanding and application of Crime Scene Investigation.
- Develop an understanding on processing of crime scene (searching, sketching and photography of Crime scene (Indoor and Outdoor).
- Brief description on procedure adopted for collection, preservation, and packaging of Physical evidences.

Course Outcomes

On completion of this course, the students will be able to

CO1. Practically do the sketching and searching of all types of crime scenes.

CO2. Perform photography with efficiency in different types of crimes.

CO3. Analyze different types of evidence and their proper collection and preservation techniques.

CO4. Justify by proper Presentation of the evidences in the court of law and significance of chain of custody.

Course Contents: Lab/Practical	Blooms level	Number of hours
1. Camera and its parts	L1, L2	6
2. Sketching of the indoor crime scene 3. Sketching of the outdoor crime scene	L1, L3, L4	12
4. Photography of the indoor crime scene 5. Photography of the outdoor crime scene	L1, L3, L4	12
6. Collection, packaging and forwarding of trace evidences by Druggist fold method. 7. Collection and preservation of various physical evidences (Fingerprint, blood, saliva, fibre, hair etc.)	L1, L3, L4	12
8. Forwarding of physical evidences	L1, L2, L3	6

FCH4111	FORENSIC AND CRIMINAL INVESTIGATIONS	L	T	P	C
Version 1.1	Date of Approval: Dec, 2021	2	1	0	3
Pre-requisites/Expos					
Co-requisites					

Catalog Description

This course is intended to provide basic knowledge of the crime scene, type of evidence and their significance in forensic investigations. It will be helpful in providing the students a basic connection between crime and the sequence of events that will help them to reconstruct the crime scene. The course will help the student to understand the significance of evidence in expert testimony and presentation of the evidence in court.

Course Objective: The course focuses on following objectives-

- Developing an understanding and appreciation of the scope of Crime Scene Investigation and Management.
- Develop an understanding on handling of different physical evidences found at the crime scene
- Develop comprehensive knowledge on various investigative techniques used in processing the crime scene.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Communicate the concept of crime scene, its types and significance in forensic science.
- CO2. Investigate crime scene Investigation and do crime scene processing along with knowledge of various techniques used for recording of a crime scene
- CO3. Apply his/her comprehensive knowledge on Physical evidence, testimonial and real evidences and the crime scene reconstruction and significance of crime scene reconstruction along with their admissibility in court.
- CO4. Apply investigative and interrogative methods in order to obtain information from criminals and to familiarize students with Expert testimony, its role and acceptance of evidence in the court.

Course Contents:	Bloom s level	Number of hours
Module I: Introduction to Forensic Science Introduction and history of Forensic Science, Basic principles and significance, Utilization of Forensic Science, Forensic scientist at the scene of crime, Structure of Forensic labs, ethics in forensic science, Forensic Science in International perspectives, including set up of INTERPOL and FBI	L1,L2	7
Module II: Crime Scene Management Definition and causation of crime, Types of crime scene, Crime scene survey, protection of crime scene, searching of physical evidences, Recording, documentation and presentation in the court, processing, and reconstruction of the crime scene.	L1, L2, L3	8
Module III: Physical Evidences Physical evidences and its types (fingerprints, glass, fibre, blood, saliva,	L1,L2	11

FCH4112	INSTRUMENTATION (CHEMICAL)	L	T	P	C
Version 1.1	Date of Approval: Dec, 2021	2	1	0	3
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

Instrumental Analysis provides a sound knowledge of the various analytical techniques used to examine different kinds of evidence recovered from scene of crime in forensic cases. It develops the ability to analyze different kinds of physical evidence of forensic importance.

Course Objective The objective of the course is to provide student with practical understanding of working and applications of various instrumentation techniques used in the forensic science laboratory for the chemical analysis of evidences.

Course Outcomes

On completion of this course, the students will be able to

CO1: Communicate the concept, basic principle, and instrumentation of various chromatographic techniques.

CO2: Describe the concept, basic principle, and instrumentation of mass spectrometry.

CO3: Explain the potential utility of computers in instrumentation.

CO4: Analyse the signal and will be able to do measurement and data analysis.

Course Contents:	Blooms level	Number of hours
Module I: Chromatographic Techniques Basic principle, instrumentation, and forensic applications of Paper chromatography, Column chromatography, TLC, High pressure thin layer chromatography.	L1, L2, L3	9
Module II: Advanced Chromatographic Techniques Gas chromatography, Ion-exchange chromatography, Exclusion (permeation) chromatography, Affinity chromatography, HPLC, High pressure liquid chromatography, Interfacing GC with IR spectrometry	L1, L2, L3, L4	9
Module III: Mass Spectrometry Sample flow, Ionization methods, Mass analyzers, Vacuum systems, Signal processors, Detectors, Data handling, Correlation of mass spectra and molecular structure, Tandem mass spectrometry, GC-MS, LC-MS, Forensic applications of mass spectrometric methods.	L1, L2, L3, L4	9
Module IV: Measurements, Signals and Data Introduction, Noise, Signal-to-noise ratio, Sensitivity and detection limit, Sources of noise, Signal-to-noise enhancement, Evaluation and measurement, precision, Accuracy and instrument calibration, Data representation, The Automated Laboratory, Molarity, Molality, Mole fraction, Normality	L1, L2, L3, L4	9

FCH4110	RESEARCH SEMINAR	L	T	P	C
Version 1.1	Date of Approval: Dec, 2021	0	0	0	1
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

Seminar is a lecture series to acquaint new graduate students with departmental research (This one will be running through out first semesters on every Monday any Lecture, where normally Ph.D. students /internal Faculties /external speakers will give talks on their research or other topic of their specialization). The trainer must make sure that the aspects covered are practically practiced by the participants. The evaluation will be done by Board of examiners comprising of the faculties.

Course Objectives

A seminar is primarily an academic event that is organized to provide the students a one-to-one hands-on experience on any aspect of their learning for research-based activity. Prerequisite, graduate studying in Chemistry/ Biochemistry/ Forensic Sciences on consent of instructor. Seminar to acquaint new graduate students with departmental research (This one will be running through out first semesters on every Monday any Lecture, where normally Ph.D. students /internal Faculties /external speakers will give talk on their research or other topic of their specialization).

The trainer must make sure that the aspects covered are practically practiced by the participants. The evaluation will be done by Board of Examiners comprising of the faculties.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain significance of research and will get an idea of current research trends in Forensic and allied sciences.

CO2: Acquaint with departmental research.

CO3: Perform in the potential seminar-based evaluations.

Major Themes for Seminar

The seminar may be conducted on any of the following major themes:

- Forensic Science & its related laws
- Criminal Investigations & its proceedings
- Forensic Chemistry
- Forensic Physics
- Forensic Ballistics
- Forensic Fraud Investigations
- Forensic Document Examinations
- Investigative Techniques
- Forensic Analytical Techniques
- Forensic Medicine & Odontology
- Forensic Anthropology Examinations
- Cyber & Digital Forensics
- Any other relevant topics

These themes are merely indicative and other recent and relevant topics of study may be included.

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-*

Course Objective: This course is designed to:

- Provide foundation knowledge of photography
- Develop an understanding and application of Photography in Forensic Science and CSI

Course Outcomes

On completion of this course, the students will be able to

CO1. Understand the basic principles of photography.

CO2. Learn about the history and development of photography, developing techniques and methods of photography.

CO3. Learn about the indoor and outdoor crime scene photography and use of photography in the reconstruction of crime scene.

CO4 Understand about the I.R and U.V illumination in Photography.

CO5. Learn about the working principles of digital Photography and Videography

Course Contents	Blooms Level	Number of hours
Module I: Introduction Introduction to forensic photography; required equipments for photography – Camera, lens, shutter, depth of field, film; Importance of Forensic photography in a crime scene investigation	L1, L2	4
Module II: Types of Photography and Photo Prints History and development of photography. Basic principles and techniques of Black & white and colour photography. Developing techniques and methods of photography, Different kinds of developers and fixers, modern developments in photography, linkage of cameras and film negatives.	L1, L2,	5
Module III: Photography of various crime scenes Photography in indoor and outdoor scene of crime. Aerial photography. Surveillance photography – Cameras and accessories for surveillance photography, moving surveillance on foot, 2-person foot surveillance, surveillance with vehicles, fixed surveillance. Use of photography in reconstructing the scene of crime and its presentation in the court of law.	L1, L2, L3	5
Module IV: Guidance Documentation Image magnification, U.V. and I.R. illumination in Photography. Photography of Artefactual evidences (Bloodstain, fingerprint, imprints, and micro evidence).	L1, L2, L3	5
Module V: High-tech Photography for Crime Scene Digital photography, working principle of digital camera works and basics of digital imaging. videography/ high speed videography, High-speed photography, legal aspects of visual evidence.	L1, L2, L3	5

*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation

FCH4202	ELEMENTS OF FORENSIC MEDICINE AND ODONTOLOGY	L	T	P	C
Version 1.1	Date of Approval: Dec, 2021	2	1	0	3
Pre-requisites/Exposure					
Co-requisites					

Course Objectives:

During the course the student will

- Understand and appreciate the scope of forensic medicine.
- Know about different types of injuries, causes and manner of death and their medico legal significance
- Learn about the utility of the odontological studies in identification and other medico legal purposes like age, sex, and population Determinations.

Course Outcomes

On completion of this course, the students will be able to

CO1. Describe various physiological and chemical changes after death and will be able to estimate time since death

CO2. Identify the type of wound and its causes, also they can estimate the age of injury.

CO3. Identify type of dentition and can estimate the age, sex, and race of individual by analyzing the given teeth.

CO4. Analyse the types of bite marks and their significance in identification of culprit and type of crime.

CO5. Explain different types of injuries and their causes and medico-legal significance.

Course Contents	Blooms level	Number of hours
Module I: Introduction to Forensic Medicine Definition of forensic medicine, cause, manner and characteristics of death. Autopsy, Post- mortem changes, Importance of canvass form; Handling buried body cases	L1, L2, L3	6
Module II: Wounds and its medico legal significance Basic injury production and healing mechanisms, Mechanical injuries (Abrasions, Bruises, Lacerations, Incised and stab wounds) and their medico legal significance, Importance of hesitation marks.	L1, L2, L3	8
Module III: Causes and manner of death Deaths due to Asphyxia, Fire, Electrocution. Various sexual offences.	L1, L2, L3	8
Module IV: Forensic Odontology - I Introduction to Forensic Odontology, Types of dentitions, Basic structure of human teeth, types of teeth & their morphology, Determination of age from teeth using various methods, Dental anomalies and their role in personal identification.	L1, L2, L3, L4	9
Module V: Forensic Odontology - II Bite marks: Types & forensic importance, Collection, preservation and examination of Bite marks, Admissibility of bite mark evidences in Court of Law. Role of Forensic odontology in mass disaster victim identification.	L1, L2, L3, L6	5

FCH4205	QUESTIONED DOCUMENTS	L	T	P	C
Version 1.1	Date of Approval: Dec, 2021	2	1	0	3
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

Questioned Documents deals with the examination of different kinds of questioned documents encountered in forensic cases. It provides a sound knowledge of the various aspects of questioned document examination. It develops the ability to analyze and resolve the crime mysteries involving forensic documents.

Course Objective: The course focuses on following objectives-

- Developing an understanding and appreciation for the scope of Questioned Documents.
- Develop an understanding on different types of questioned documents, the types of forgeries and disguise generally encountered.
- Give brief description on various methods of their detection and examination.

Course Outcomes

On completion of this course, the students will be able to

CO1: Understand the concept of questioned documents and its examination.

CO2: Learn various types of forgeries and examination of charred documents, sequence of strokes.

CO3: Learn different methods to determine age of questioned documents and examination of printed and photocopy documents.

CO4: Learn different instruments used to examine questioned documents.

CO5: Understand the concept of forensic report including its format and preparation.

Course Contents:	Blooms level	Number of hours
Module I: Questioned Documents Definition, Importance, Classification and preliminary examination of questioned documents. Handwriting: definition, development, Instruments and Appliances of handwriting expert. Handwriting Characteristics: General Characteristics, Individual Characteristics, Development of Individuality in Handwriting, digital questioned documents and their examination.	L1, L2	9
Module II: Forgeries Forgery and its types and characteristics, identification, and examination of forgeries. Decipherment of secret indented and charred documents, Preservation of documents, Examination of seal and other mechanical impressions, examination of sequence of intersecting of strokes, Standards for Comparison and Disguise etc. Advantages and disadvantages of exemplar and non-exemplar samples	L1, L2, L3	7
Module III: Age of Document & Alterations Determination of Age of Document- Absolute/relative age, Alterations in the document: erasures, additions, overwriting and obliterations. Classification and working of typewriters alterations in typed text, , Comparison of Printed matter- Various printing processes.	L1, L2, L3, L4	10
Module IV : Instrumentation and Photography of Documents Basic principles and techniques Visible and Florescence (UV and IR),	L1, L3, L4	6

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Photomicrography & Microphotography, Stereo-zoom microscopy, Video Spectral Comparator (VSC) and Electrostatic Detection Apparatus (ESDA).		
Module V: Security Documents Brief description of security documents, security and verification features of passports, credit cards, cheques etc. Types of security documents, Salient features for identifications, Instrumentation used for their examination.	L1, L2, L3	4

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

FCH4206	FORENSIC MEDICINE AND ODONTOLOGY -LAB	L	T	P	C
Version 1.1	Date of Approval: Dec, 2021	0	0	4	2
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

This course is intended to provide basic knowledge of practical aspects of Forensic medicine to the students. It will be helpful in providing the students a practical knowledge of dentition, bite marks and their investigations and the basic connection between forensic science and law. The course will help the student to understand the physiological and chemical changes in various types of death and will be able in solving the crime.

Course Objective:

- Identification of individual teeth, dental charting.
- To identify individual by using dentition.
- Age estimation by dental evidences.

Course Outcomes

On completion of this course, the students will be able to

CO1. Describe the types of dentitions, characteristics of individual teeth that will help in criminal investigations and species identification.

CO2. Estimate age of person by teeth and x rays.

CO3. Correlate bite marks with species and individuals and type of crime and present in court of law.

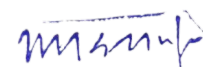

CO4. Interpret the results of autopsy and its correlation with type of crime and type of evidences.

Course Contents: - Lab/Practical	Blooms level	Number of hours
1. Types of Dentitions a. Temporary b. Mixed c. Permanent	L1, L3, L4	16
2. Identification of individual teeth based on the morphological features.	L1, L3, L4	12
3. Estimation of age from the teeth. a. Living subject b. Maxilla & mandible c. From X-Rays	L1, L3, L4	10
4. Comparison and Identification of Individuals from bite marks a. Direct comparison b. By casting c. By photography	L1, L3, L4	8
5. Autopsy observation through visits and recording the files		2

FCH4208	QUESTIONED DOCUMENTS AND FINGERPRINTS – LAB	L	T	P	C
Version 1.1	Date of Approval: Dec, 2021	0	0	4	2
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

This course is intended to provide the basic knowledge about the instruments which can be used for the analysis of biological samples. The students will understand the basic principle of the instruments and will be able to apply different techniques as per the requirement of the investigations in medicolegal cases.

Course Objective: - The course focuses on following objectives-

- Developing an understanding and application on practical aspects of Questioned Documents and Fingerprints.
- Develop an understanding on procedure adopted for examination of different types of questioned documents, the types of forgeries, disguise and their examination along with giving appropriate conclusion on the basis of findings.
- Brief description on identification, analysis and examinations of various kinds of fingerprints and other impressions that are encountered on crime scenes.

Course Outcomes

On completion of this course, the students will be able to

CO1. Examine and comparison of security documents, fake currency and stamp papers.

CO2. Explain the procedure adopted for examination of different types of questioned documents, the types of forgeries, disguise and their examination along with giving appropriate conclusion on the basis of findings.

CO3. Develop different types of fingerprints and interpret the results.

CO4. Perform fingerprint development by different methods for the forensic investigations.

Course Contents: - Lab/Practical		Blooms level	Number of hours
1. Examination and comparison of security documents, fake currency and stamp papers.	2. Examination and comparison of disputed anonymous letter with specimen of suspect/suspects. 3. Identification of altered/added/obliterated/erased/handwriting on cheques and deeds.	L1, L2, L3, L4	12
4. Comparison of forged (disputed) signature with the specimen signatures.			
5. Comparison of disguised (disputed) signature with specimen signatures			
6. Development of latent fingerprints by chemical methods and photography.	7. Development of latent fingerprints by physical methods and photography. 8. Comparison of fingerprints, palm prints based on ridge	L1, L2, L3, L4	14

FCH4209	INSTRUMENTATION (BIOLOGICAL)	L	T	P	C
Version 1.1	Date of Approval: Dec, 2021	2	1	0	3
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

This course is intended to provide the basic knowledge about the instruments which can be used for the analysis of biological samples. The students will understand the basic principle of the instruments and will be able to apply different techniques as per the requirement of the investigations in medicolegal cases.

Course Objective: The objective of the course is to provide student with practical understanding of working and applications of various instrumentation techniques used in the forensic science laboratory for the analysis of biological evidences.

Course Outcomes

On completion of this course, the students will be able to

CO1. Explain various biological phenomena associated with Forensic Science and the utility of various biological changes in forensic science.

CO2. Describe the principle, types, and applications of the centrifugation in forensic science.

CO3. To understand the various types of electrophoresis for the analysis of biological and toxicological samples

CO4. Analyse the biological samples by immuno-electrophoresis.

CO5. Apply various types of microscopes for the forensic investigations

Course Contents:	Blooms level	Number of hours
Module I: General Principles of Biological/ Bio-chemical Analysis pH and buffers, Physiological solution, Cell fractionation. Genetic Manipulations, Enzymes used in genetic manipulation, Cloning procedures, Isolation of specific nucleic acid sequences – complementary DNA, Gene libraries, Colony hybridisation, Expression of genes	L1, L2, L3	11
Module II: Centrifugation Techniques Basic principles of sedimentation, Various types of centrifuges, Density gradient centrifugation, Preparative centrifugation, Analysis of sub-cellular fractions, Ultra-centrifuge- Refrigerated Centrifuges.	L1, L2, L3, L4	10
Module III: Electrophoretic Technique General principles, Factors affecting electrophoresis, Types of Electrophoresis- Agarose gel electrophoresis, Polyacrylamide gel electrophoresis, its types, Isoelectric focusing (IEF), Iso-electrophoresis.	L1, L2, L3, L4	9
Module IV: Immuno-chemical Techniques General principles, Production of antibodies, Precipitin reaction, Gel immuno-diffusion, Immuno-electrophoresis, Radio Immuno-assay (RIA), ELISA, Fluorescence Immuno-assay.	L1, L2, L3, L4	8

Prof. (Dr.) Anil Kumar

FCH4210	FINGERPRINT SCIENCE	L	T	P	C
Version 1.2	Date of Approval: Dec, 2021	2	1	0	3
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

This course will help the students to understand basic of fingerprint science and their systematic classification.

Course Objective: The course focuses on following objectives-

- Developing an understanding and appreciation for the scope of Fingerprints Examination.
- Develop an understanding on various methods of development of Fingerprints.
- Develop comprehensive knowledge on fingerprint patterns, fingerprint classification, the various methods of fingerprint development- physical and chemical.

Course Outcomes

On completion of this course, the students will be able to

CO1. Identify and outline various types of fingerprints patterns

CO2. Distinguish and categorise characteristics of fingerprints for proper collection and preservation.

CO3. Classify fingerprints for case solving and matching of suspect prints with crime scene evidences.

CO4. Apply advanced knowledge of Automated fingerprints identification for forensic examination in court of law.

Course content:	Blooms level	Number of hours
Module I: Introduction to Fingerprints Dactylography, Dermatoglyphics and Dactyloscopy, Basis concepts of Fingerprint Science, Friction ridge skin, Morphogenesis of friction ridge skin, Primary dermal ridge development, Definition of fingerprint, History of fingerprint identification, Fingerprint as forensic evidence, Visible finger-marks, Latent finger-marks.	L1, L2	7
Module II: Classification of Fingerprints for Comparison purposes Pattern area, Core, Delta, Type lines, ridge characteristics, Fingerprint Pattern types: Essentials and its types: Loop, Arch, Whorl, Composites, Accidental patterns etc., Ten Digit and Single Digit fingerprint classification.	L1, L2, L3	8
Module III: Methods of Taking Fingerprints From living and dead persons, preserving and lifting of fingerprints. Comparison protocols: Class and individual characteristics (Galton's details), different ridge characteristics, Standards of proof, Automatic Fingerprint Identification System (AFIS), Poroscopy and Edgescopy. Multimetal deposition technique; Physical developer technique; Importance of light sources in fingerprint science	L1, L2, L3, L4	7
Module IV: Fingerprint Developing Methods Chemistry of latent fingerprint residue, factor contributing to latent fingerprints, Methods of development of latent fingerprints using conventional methods-	L1, L2, L3, L4	7

Powder (Black and grey, fluorescent, and magnetic), Fuming method, Vacuum metal deposition (VMD) method, Chemical method, Reagent chemistry and formulations, Photography of fingerprints.		
Module V: Report Writing and Court Room Testimony Evidence and testimony in court, Information required by the Forensic expert, Components of forensic reports, Preparation of report, Presenting findings in a report, Expert and the rules of evidences, Daubert's challenges to fingerprints.	L1, L2, L3	7

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

Examination Scheme:

FCH4231	TERM PAPER	L	T	P	C
Version 1.1	Date of Approval: Dec, 2021	0	0	0	1
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

Seminar is a lecture series to acquaint new graduate students with departmental research (This one will be running through out first semesters on every Monday any Lecture, where normally Ph.D. students /internal Faculties /external speakers will give talks on their research or other topic of their specialization). The trainer must make sure that the aspects covered are practically practiced by the participants. The evaluation will be done by Board of examiners comprising of the faculties.

Course Objectives

A seminar is primarily an activity based academic event that is organized to provide the students a one-to-one hands-on experience on any aspect of their learning for research-based activity. Prerequisite, graduate studying in Chemistry/ Biochemistry/ Forensic Sciences on consent of instructor. Seminar to acquaint new graduate students with departmental research (This one was for second semester students to attained and fourth semester students had to present on one selected topic of their choice or Ph.D. students/internal faculties /external speaker will give talk).

The trainer must make sure that the aspects covered are practically practiced by the participants. The evaluation will be done by Board of examiners comprising of the faculties. This one will be one time event in one semester.

On completion of this course, the students will be able to

CO1: Explain significance of research and will get an idea of current research trends in Forensic and allied sciences.

CO2: Acquaint with departmental research

CO3: Discuss the potential seminar-based evaluations

Major Themes for Seminar

The seminar may be conducted on any of the following major themes:

- Forensic Science & its related laws
- Criminal Investigations & its proceedings
- Forensic Chemistry
- Forensic Physics
- Forensic Ballistics
- Forensic Fraud Investigations
- Forensic Document Examinations
- Investigative Techniques
- Forensic Analytical Techniques
- Forensic Medicine & Odontology
- Forensic Anthropology Examinations
- Cyber & Digital Forensics
- Any other relevant topics

These themes are merely indicative and other recent and relevant topics of study may be included.

*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation

Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

FCH4301	FORENSIC CHEMISTRY, TOXICOLOGY AND PHARMACOLOGY	L	T	P	C
Version 1.1	Date of Approval: Dec, 2021	2	1	0	3
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

This course is intended for students to understand about Forensic chemistry and its various aspects in related field. The syllabus contains the various analytical methods to examine alcoholic beverages along with its toxicity. It also contains the drug abuse in sports and doping, classification and routes of administration of poisons and extraction and isolation techniques of various drugs from biological viscera.

Course Objectives:

During the course the student will:

- Understand the scope of forensic chemistry, toxicology, and pharmacology
- Understand and appreciate the scope, diversity, and utility of a variety of chemical analysis
- Learn the principles of primary techniques used for forensic identification of various chemicals, drugs, and poisons

Course outcome

On completion of this course, the students will be able to

CO1. Explain the need and scope of Forensic chemistry & Toxicology.

CO2. Apply the analytical procedure of alcohol & their examination.

CO3. Differentiate between use and abuse of drugs and their laboratory analytical methods.

CO4. Classify the poison and identify them in forensic science laboratory.

Course Contents	Blooms level	Number of hours
Module I: Introduction to Forensic Chemistry Forensic Chemistry: Introduction, types of cases/exhibits, preliminary screening, presumptive test (colour and spot test), inorganic analysis, micro – chemical methods of analysis, Analysis of petroleum products.	L1, L2, L3	6
Module II: Toxicology of alcohol and Examination of Alcoholic Beverages Fate of alcohol in body, alcohol in the circulatory system, Breath test instruments, Field Sobriety testing, Examination of alcoholic beverages; Country made liquor, Illicit liquor. Analysis of blood for alcohol.	L1, L2, L3, L4	6
Module III: Drugs of Abuse Introduction, classification of drugs of abuse, drugs of abuse in sports and doping, narcotics drugs and psychotropic substances, designer drugs and their forensic examination, Drugs and Cosmetic Act, Excise Act, NDPS Act. Dose-response relationship; Importance of Lethal dose 50	L1, L2, L3, L4	6
Module IV: Introduction to Toxicology Definition, Law relating to poison, Classification of poisons. Action of poisons and factors modifying its action, routes of administration of poisons, Role of Toxicologist	L1, L2, L3, L4	6

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Module V: Forensic Pharmacology Pharmacology and Toxicology of Psychotropic Drugs: Sedatives, Stimulants, Opiates. Extraction, Isolation of drugs from viscera, tissues and body fluids.	L1, L2, L3, L4	6
--	----------------	---

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

FCH4302	FORENSIC BIOLOGY AND SEROLOGY	L	T	P	C
Version 1.1	Date of Approval: Dec, 2021	2	1	0	3
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

This course is intended to give insight of providing the basic knowledge about the anatomy and physiological changes in odontology. The students will be able to correlate the bite marks with type of crime. The course will help the students to differentiate between wound and their medicolegal studies.

Course Objective: This course will cover:

- The important biological evidences commonly found at crime scene
- Significance of forensic anthropology, and forensic botany.
- Importance of serology and DNA analysis in interpretation of crime.

Course Outcomes

On completion of this course, the students will be able to

CO1. Explain the significance of biological evidences in the forensic science.

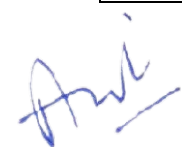

CO2. Identify and differentiate different types of fibres and racial difference in the fibres.

CO3. Demonstrate features of skeleton system, explain peculiar features of the human skeleton and its significance in age, sex and race determination

CO4. Utilize various biological fluids for the crime investigation and individual identification.

CO5. Summarize significance and applicability of DNA fingerprinting in the forensic investigations

Course Contents	Blooms level	Number of hours
Module I: Hair and Fibre Structure of hair and its biochemical properties, Phases of hair growth, types of hair. Differences between animal and human hair, Forensic examination of different types of hair. Different types of fibres and their identification.	L1, L2, L3	7
Module II: Botanical Evidences and Diatoms Different botanical evidences of forensic significance: seeds, pollens etc. Diatoms: Classification, basic structure and morphology, forensic significance of diatoms, extraction methods, examination of wood	L1, L2, L3,	6
Module III: Forensic Anthropology Definition and scope of forensic anthropology, Human skeletal system, and types of bones. Estimation of age from skull and long bones, site, and side determination. Estimation of stature from skeletal remains. Determination of sex from skull, mandible, and pelvis.	L1, L2, L3, L4	7

Prof. (Dr.) Anil Kumar
Deputy Dean Academics

Manesar Gurgaon-122413

Module IV: Forensic Serology Definition and scope of forensic serology. Nature, composition and functions of blood and other fluids. Collection, preservation and packing of biological fluids. Introduction to ABO, Rh, MN systems, Lectins – their forensic significance, Determination of secretor/ non secretor status.	L1, L2, L3, L4	8
Module V: DNA Profiling DNA Profiling: Introduction, molecular biology of DNA, polymorphism, DNA Extraction methods (Organic and Inorganic extraction, FTA cards), DNA typing systems- RFLP analysis, sequence polymorphism. Evaluation of results, analysis of STR, SNP and Mitochondrial DNA markers, Y-STRs, PCR amplifications, Forensic applications of DNA profiling, limitations of DNA profiling	L1, L2, L3	8

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

FCH4304	FORENSIC BIOLOGY AND SEROLOGY-LAB	L	T	P	C
Version 1.2	Date of Approval: Dec, 2021	0	0	4	2
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

This course is intended to provide basic knowledge of practical aspects of Forensic serology, anthropology, and botany to the students. It will be helpful in providing the students a practical knowledge of various biological and botanical evidence and their analysis and significance in forensic investigations to establish connection between crime and suspect.

Course Objective: This course will cover:

- The practical aspects of forensic biology, anthropology, and serology
- To collect, pack and analyse biological, anthropological, & serological evidences
- To document chain of custody, write laboratory reports pertaining to the examinations conduct presumptive and confirmatory tests for evidence

Course Outcomes

On completion of this course, the students will be able to

- CO1.** Perform various tests for the species and personal identification that can help criminal investigations.
- CO2.** Estimate age of person by anthropological examination.
- CO3.** Correlate the time, site and cause of the crime by the identification of the diatoms and its presentation in court of law.
- CO4.** Understand the types of fibres, their identification and utility in forensic identification of the person.

Course Contents: Lab/ Practical	Blooms level	Number of hours
1. Determination of species of origin from blood and other biological evidences using precipitin test 2. Presumptive and confirmatory tests for blood 3. Examination and identification body fluids 4. Gel Immuno-diffusion tests for species origin 5. Blood grouping from dried stains by Absorption Inhibition or Absorption Elution	L1,L2,L3,L4	12
6. Microscopic examination of hair for the determination of different types of medulla and scale 7. Microscopic examination of hair for the determination of species	L1, L2, L3, L4	12
8. Extraction /Isolation of Diatoms from water/soil and tissues	L1, L2, L3, L4	6

FCH4305	FORENSIC CHEMISTRY AND TOXICOLOGY - LAB	L	T	P	C
Version 1.1	Date of Approval: July, 2019	2	0	0	2
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

This course is intended for students to perform various practical in the field of Forensic Chemistry & Toxicology, to isolate different toxic substance, perform thin layer chromatography of several drugs and cations and anions analyses.

Course Objective:

The students will understand & perform experiments related to:-

- Isolation techniques for different poisons
- Analysis of different poisons
- Spot tests for different cations and Anions

Course Outcome

On completion of this course, the students will be able to

CO1. Demonstrate the isolation techniques of different toxic substances.

CO2. Perform the TLC and analysis of various drugs and poisons.

CO3. Perform various tests to analyze cations and anions.

Course Contents: - Lab/Practical		Blooms level	Number of hours
1.	Isolation techniques of different toxic substances	L1, L2, L3, L4	16
2.	TLC of insecticides, Barbiturates and other drugs		
3.	Spot test of mercury, iron, copper, aluminium, cadmium, zinc and other metallic poisons		
4.	Analysis of volatile and non-volatile poisons	L1, L2,	16
5.	Analysis of vegetable poisons		
6.	Spot test of nitrates, nitrites, carbonates, sulphates, sulphites, chlorates	L1, L2, L3, L4	16

FCH4315	STATISTICS AND RESEARCH METHODOLOGY	L	T	P	C
Version 1.1	Date of Approval: Dec, 2021	2	1	0	3
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

Research Methodology and Statistics provide the detailed knowledge about the concept of research methods and its utility in forensic science. It develops the ability to carry research in different fields of forensic science.

Course Objective: This course is designed to:

- Provide foundation knowledge of quantitative and qualitative research methods used in Forensic Sciences.
- Provide understanding of the use of survey, field, and qualitative research techniques to develop practice knowledge.
- Describe distributions in terms of shape, centre, and spread including the ability to construct visual displays of data (charting, graphing).
- Provide an understanding of and ability to use the basic principles of statistical inference.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the types of research, methods of sampling used in statistics.

CO2: Apply different methods of data collection and statistical methods useful in forensic science.

CO3: Define the concept and types of parametric and non-parametric tests.

Course Contents:	Blooms level	Number of hours
Module I: Introduction to Research Research: Definition, motives and objectives, Types of Research, Research process, Defining the research problem, Research design.	L1, L2	7
Module II: Sampling Principles, methods: census and sample survey, sample design. Types of sampling, rationale for using a particular sampling procedure.	L1, L2, L3	7
Module III: Tools of Data Collection Observation, interview schedule, questionnaire, survey, case study methods	L1, L2, L3	5
Module IV: Statistics Introduction, Frequency distribution, class intervals, graphical presentation: Line graphs, bar diagram, histogram, pie chart; Measures of Central Tendency: mean, median, mode; Measures of dispersion: Range, Mean deviation, Quartiles, Percentiles, Variance and standard deviation. Skewness and Kurtosis, Pearson and Spearman correlation methods, Regression equations.	L1, L2, L3	10
Module V: Statistics II Tests of Significance, Normal distribution, Confidence level. Level of Significance, Parametric and non-parametric tests, F-test, t-test, Z-test, Chi square test, ANOVA.	L1, L2, L3, L4	7

FCH4316	INSTRUMENTATION (PHYSICAL)	L	T	P	C
Version 1.1	Date of Approval: Dec, 2021	2	1	0	3
Pre-requisites/Exposure					
Co-requisites					

Course Objective: The objective of the course is to provide student with practical understanding of working and applications of various instrumentation techniques used in the forensic science laboratory for the analysis of evidences.

Course Outcome

On completion of this course, the students will be able to

CO1: Explain the principle and application of Spectroscopy.

CO2: Describe types of Molecular spectroscopy, their principle and instrumentation and application in forensic science.

CO3: Describe types of Atomic spectroscopy, their principle and instrumentation and application in forensic science

Course Contents:	Blooms level	Number of hours
Module I: Basic Concepts - Atomic & Molecular Spectroscopy Introduction to Atomic orbitals, spectra, Bohr Model. Quantum Theory, molecular orbital, types of molecular energies, vibrational and electronic spectra. Classification of spectroscopic methods.	L1, L2, L3	10
Module II: Molecular Spectroscopy Ultra-violet and visible spectrophotometry: Types of sources and stability, wavelength selection, filters, reference cells and sampling devices, detectors, resolution, qualitative and quantitative methods for detection (Single beam and double beam). Infrared spectrophotometry: Basic principle, Dispersive and non-dispersive instruments, FTIR, instrumentation, Forensic applications, correlation of infra-red spectra with molecular structure. Raman spectrophotometry: Basic principle, theory, instrumentation, forensic applications. Fluorescence spectrophotometry: Types of sources, structural factors, instrumentation, comparison of luminescence and UV-visible absorption methods.	L1, L2, L3, L4	13
Module III: Atomic Spectroscopy Atomic absorption spectrometry: Instrumentation and techniques, interference in AAS, background correction methods, quantitative analysis, Applications in Forensic Science. Atomic emission spectrometry: Instrumentation and techniques, arc/spark emission, comparison of ICP vs AAS methods, quantitative analysis, applications in forensic science. X-ray spectroscopy: X-ray absorption and fluorescence methods, X-ray diffraction, Applications in Forensic Science. Neutron Activation Analysis: Introduction, principle, theory, instrumentation, and forensic applications.	L1, L2, L3, L4	13

FCH4318	INSTRUMENTATION WORKSHOP	L	T	P	C
Version 1.1	Date of Approval: Dec, 2021	0	0	0	1
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

Instrumentation Workshop is a lecture series along with instrumental demo to acquaint new graduate students with departmental research (This one will be running through out first semesters on every Monday any Lecture, where normally Ph.D. students /internal Faculties /external speakers will give talks on their research or other topic of their specialization). The trainer must make sure that the aspects covered are practically practiced by the participants. The evaluation will be done by Board of examiners comprising of the faculties.

Course Objectives

A workshop/seminar is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop must be necessarily two ways. The trainer must make sure that the aspect covered is practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the principle and application of instruments in forensic research and will get an idea of application of the recent instruments in Forensic and allied sciences.

CO2: Acquaint with departmental research.

CO3: Learn the potential seminar-based evaluations.

Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

- Crime Scene Investigation
- Forensic Toxicology
- Forensic Anthropology
- Handwriting & Typewriting Analysis
- Crime Scene Investigation
- Criminology, Criminal Law & Police Administration
- Fingerprint Science
- Forensic Serology
- DNA Fingerprinting
- Wounds & its Medico-Legal Aspects

These themes are merely indicative and other recent and relevant topics of study may be included.

Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

- i. Relevant study material and references will be provided by the trainer in advance.
- ii. The participants are expected to explore the topic in advance and take active part in the discussions held
- iii. Attending and Participating in all activities of the workshop

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- iv. Group Activities must be undertaken by students as guided by the trainer.
- v. Evaluation of workshop activities would be done through test and quiz at the end of the workshop.
- vi. Submitting a write up of at least 500 words about the learning outcome from the workshop.

Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

- i. Case Study
- ii. Simulation
- iii. Quiz
- iv. Quality analysis & characterization
- v. Identification and preparation of materials

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

Evaluation Scheme:

FCH4306	ADVANCED FORENSIC BIOLOGY AND ANTHROPOLOGY	L	T	P	C
Version 1.1	Date of Approval: Dec, 2021	2	1	0	3
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

This course is intended to provide advanced of the forensic biology and anthropology. The students will understand the advanced analytical techniques. It will be helpful in providing knowledge of the various branches of biology and their direct applications in the criminal investigation.

Course Outcomes

On completion of this course, the students will be able to

CO1. Explain wildlife forensics, Wildlife life protection Act and significance of wildlife evidences for criminal investigations and species identification.

CO2. Describe various concepts of entomology and its forensic relevance

CO3. Apply various instruments for individual identification from skeletal remains and presentation of these evidence in court of law.

CO4. Develop comprehensive knowledge of Superimposition techniques, Facial reconstruction for Personal Identification

Course Objectives:

During the course the student will

- Understand and appreciate the scope of forensic biology and Forensic Anthropology
- Understand and appreciate the scope, diversity, and utility of a variety of Human, Animal and plant evidences and their examination
- Learn the primary technique used for identification of various biological evidences
- Acquire the knowledge on techniques presently being used in the forensic examination of biological evidences and skeletal remains

Course Contents	Blooms level	Number of hours
Module I: Introduction to Wildlife Forensics Introduction to wildlife forensics, Examination of pug marks, horn, skin, fur, hair, nail, and teeth. Identification of some endangered species of plants and animals. Wildlife life protection Act.	L1, L2	6
Module II: Forensic Entomology and Forensic Microbiology Collection of insects, Shipment of collected insects, Identification of insect and its stage of growth. Determination of the post-mortem interval or "time since death" in homicide investigations, Forensic Entomotoxicology. Introduction to Forensic microbiology	L1, L2, L3	8
Module III: Forensic Anthropology Somatometry, Osteometry and Craniometry. Identification of individuals from skeletal remains, Collection, Handling, preservation of skeletal remains of forensic science and report writing.	L1, L2	7

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana

FCH4319	FORENSIC GENETICS	L	T	P	C
Version 1.1	Date of Approval: Dec, 2021	2	1	0	3
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

This course is intended to give insight of providing the basic knowledge about the DNA, genes, and chromosomes. The students will be able to identify the genic origin of the sample and will be able to match the samples with relatives. The course will help the students to understand the concept of allele transfer and its forensic application.

Course Objective: This course is designed to:

- Provide foundation knowledge of genetics
- Provide understanding of the inheritance laws and gene interactions
- Provide understanding of mutation and genetic diseases

Course Outcomes

On completion of this course, the students will be able to

CO1. Explain the significance of biological evidences in the forensic science.

CO2. Describe concept of gene and chromosome and how these are transferred to next generation.

CO3. Describe concept of mutation and genetic variations and their utility in crime investigation.

CO4. Utilize their knowledge of DNA for establishing identity, species differentiation and Forensic genetic research.

Course Contents:	Blooms level	Number of hours
Module I: Introduction to Genetics Mendel's work and Laws of heredity, Test cross, Backcross, Incomplete dominance and simple problems, Structure of DNA and RNA, Structural organization of chromosome, Special types of chromosomes (Salivary gland and Lamp-brush chromosomes)	L1, L2	6
Module II: Cell Division and Linkage Cell cycle, Mitosis and Meiosis, Coupling and repulsion hypothesis, Mechanism of linkage and its importance, Linkage in Maize and Drosophila, Mechanism of crossing over and its importance	L1, L2	8
Module III: Interaction of Genes Supplementary genes, Complementary genes, Pleiotrophy, Lethal genes, Epistasis, Multiple Allelism	L1, L2	7
Module IV: Mutations Mutagens and their types (Physical, chemical, biological), Mutation: Definition and types, Spontaneous and induced mutation, Chromosomal and Gene Mutation, Mutations in plants, animals, and microbes for economic benefit of man	L1, L2, L3	7

FCH4317	CYBER FORENSIC AND COMPUTER APPLICATIONS	L	T	P	C
Version 1.1	Date of Approval: Dec, 2021	2	1	0	3
Pre-requisites/Exposure					
Co-requisites					

Course Objective: The objectives of the course are to:

- Provide students with a technical skills and competencies in the field of forensic computing thus producing competent and confident graduates.
- Produce students who will have a hands-on knowledge and able to perform technical role in forensic computing field.
- Equip students with the right skills thus enabling them to adapt real working environment, while contributing positively to the society at large.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Describe the basis concept of computer.
CO2. Explain about the fundamentals of programming language and internet concept
CO3. Describe the basics of operating system and data storage devices.
CO4. Illustrate the biometric system and their pattern recognition.
CO5. Explain the cybercrime and their tools for analysis.

Course Contents:	Blooms level	Number of hours
Module I: Computer Fundamentals - I Computer characteristics and classifications, Concept of Computer Hardware, Concept of Computer Software	L1, L2	8
Module II: Computer Fundamentals - II Fundamentals of programming languages, Concept of Algorithm and Flow Chart, Networking, and Internet Concepts	L1, L2	6
Module III: Data Storage Fundamentals Data storage devices, Storage fundamentals (Sector, Cluster, FAT etc.), File System Concepts, Data Storage and recovery, Basics of Operating System Software, Understanding Storage Formats for Digital Evidences – Raw Format, Proprietary Formats, Advanced Forensic Formats. Data Acquisition of live system, Shutdown Systems and Remote systems. Digital Forensics Standard Operating Procedures. Software and Hardware Tools used in Forensic Analysis – Open Source and Proprietary tools.	L1, L2, L3	7
Module IV: Pattern Recognition and Biometrics Pattern Recognition and Biometrics – Face, Iris and retinal imaging, Speech recognition, finger and palm print, gait pattern, signatures, Pattern comparison, Image processing – Proactive Forensic science	L1, L2, L3, L4	7
Module V: Cyber Crimes, Search and Seizures of Evidence Cyber Crimes – definition, Types, IT laws – introduction, internet, hacking, virus, obscenity, pornography, programme manipulation, software piracy, intellectual property, and computer security etc., Encryption and Decryption methods, Investigation of cyber-crimes and tools for analysis Types of evidence present in mobile phones and SIM cards, Evidence collection from Mobile	L1, L2, L3, L4	7

FCH4310	ADVANCED QUESTIONED DOCUMENTS AND FINGERPRINTS EXAMINATION	L	T	P	C
Version 1.1	Date of Approval: Dec, 2021	2	1	0	3
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

Advanced Questioned Document Examination deals with the examination of different kinds of questioned documents encountered in forensic cases. It provides a sound knowledge of the various aspects of questioned document examination. It develops the ability to analyze and resolve the crime mysteries involving forensic documents

Course Objective: The course focuses on following objectives-

- Developing an understanding and appreciation for the scope of Questioned Documents Examination.
- Develop an understanding on different types of cases in questioned documents and different writing conditions.
- Brief description on case presentation and report writing.
- Develop comprehensive knowledge on advanced Instrumentation techniques used for examination.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the concept of poroscopy and edgescopy.

CO2: Explain advanced Methods of Development of Latent Fingerprints

CO3: Perform evaluation and development of handwriting including forensic report including its format and preparation.

CO4: Explain different types of security documents and different instruments used to examine questioned documents.

Course Contents:	Blooms level	Number of hours
Module I: Introduction to Poroscopy and Edgescopy Introduction: Poroscopy and edgescopy, Fingerprints examination on the basis of poroscopy and its significance, evaluation of fingerprints on the basis of edgescopy and its significance in fingerprint field.	L1, L2	8
Module II: Advanced Methods of Development of Latent Fingerprints Automatic fingerprint identification system, application of radiations to examine latent fingerprints on various surfaces including skin, SPR, Phase transfer catalyst, DFO, Indanedione, Oil RedO, Factors affecting fingerprints.	L1, L2, L3	10
Module III: Personality assessment and Different Writing Condition Evaluation of personality and psychological traits from handwriting, Evolutionary phases in handwriting, effect of age factor in handwriting and variations in handwriting characteristics, effect of alcohol and drugs on handwriting characteristics/ signatures.	L1, L2, L3	8

Prof. (Dr.) Amit Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Module IV: Report Writing and Case Representation Expert's opinion, Examination in chief, Cross examination, Re-examination, Oath taking, Summons for evidences, Report writing and Case representation in Court of Law as Moot court.	L1, L2, L3	10
--	------------	----

FCH4320	ADVANCED FORENSIC CHEMISTRY AND TOXICOLOGY	L	T	P	C
Version 1.1	Date of Approval: Dec, 2021	2	1	0	3
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

This course is intended for students to understand about Forensic chemistry and its various aspects in related field. The syllabus contains the various analytical methods to examine alcoholic beverages along with its toxicity. It also contains the drug abuse in sports and doping, classification and routes of administration of poisons and extraction and isolation techniques of various drugs from biological viscera.

Course Objective: - The objectives of the course:

- The student understands the basic pharmacodynamics, pharmacokinetic and toxicological principles underlying the actions of the various poisons encountered in forensic toxicology.
- To ensure that the student understand nature of the toxicological investigations undertaken in forensic laboratories.

Course outcome

On completion of this course, the students will be able to

- CO1. Describe the mechanism of drug action and interactions in body.
CO2. Explain the drug movement and distribution in body & their examination.
CO3. Discuss the difference between use and abuse of drugs and their laboratory analytical methods.
CO4. Classify the poison and identify them in forensic science laboratory.

Course Contents:	Blooms level	Number of hours
Module I: Pharmacology-I Sites and mechanisms of action of drugs, Dose-effect relationships; agonists, partial agonists, and antagonists. Factor modifying drug actions; side effects, overdose, idiosyncratic and allergic reactions; teratogenesis and foetal toxicity. Drug interactions.	L1, L2	6
Module II: Pharmacology-II Movement of drug molecules across cell membranes, Blood-brain barrier and Placental filter. Routes of administration and drug adsorption. Binding to plasma proteins. Drug distribution, metabolism and elimination. Drug bioavailability and half-life.	L1, L2, L3	7
Module III: Toxicology and Isolation techniques of toxins Definition of Toxicology, Principle of toxicology, Isolation of toxic substances from viscera and other relevant materials. Role of drug recognition expert.	L1, L2, L3	8
Module IV: Different Toxins-I Nature, administration, sign and symptoms, Fatal dose, post-mortem findings, Detection, and medicolegal aspects of- a) Metallic poisons Arsenic, Mercury b) Vegetable poisons Abrus Precatorius, Calotropis Gigantia, Castor, Oleander, Aconite	L1, L2, L3	7

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Module V: Different Toxins-II a) Insecticides Organo-phosphorous compounds, Organo-chloro Compounds and Carbamates b) Volatile Poisons Methyl alcohol, Chloroform, c) Asphyxiants Cyanide, Carbon monoxide d) Animal Poisons Snake venom, Cantharide, Insect bite.	L1, L2, L3	8
---	------------	---

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

FCH4321	FORENSIC WILDLIFE AND ENTOMOLOGY	L	T	P	C
Version 1.1	Date of Approval: Dec, 2021	2	1	0	3
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

This course is intended to provide advanced knowledge of the forensic wildlife and entomology. The students will understand the advanced analytical techniques to detect poaching. It will be helpful in providing knowledge of the various branches of biology and their direct applications in the criminal investigation.

Course Objective: During the course the students will be able to

- Understand the scope of wildlife forensics
- Understand and appreciate the diversity and utility of variety of animal evidences
- Elaborate concepts of entomology
- Estimate the time since death by life cycle of different insects

Course Outcomes

On completion of this course, the students will be able to

- CO1. Describe entomology, time since death by insects, collection and preservation of the evidences
- CO2. Explain role of insects in toxicological analysis
- CO3. Explain significance of botanical evidences such as wood, leaves, pollens etc in forensic investigations
- CO4. Analyse diatoms for forensic examination of drowning deaths and role of microbes in these investigations
- CO5. Explain and analyse wildlife forensics, Wildlife life protection Act and significance of wildlife evidences for criminal investigations and species identification.

Course Contents	Blooms level	Number of hours
Module I: Forensic Entomology History, significance, determination of time since death- Dipterans larval development- life cycle of blowfly, housefly. Succession colonization of body, determining whether the body has been moved, body disturbance, presence and position wounds, linking suspect to the scene, collection and preservation of entomological evidence.	L1, L2	7
Module II: Entomo-toxicology Insects as toxicological indicators, Impact of drugs & toxins on insect development and Identification of drugs and toxins from the insects and larvae feeding on the body, entomology as an evidentiary tool in abuse cases.	L1, L2, L3	8
Module III: Botanical evidences Introduction, types, location, collection evaluation and forensic significance. Wood: Type of wood and their identification and comparison. Leaves: Identification of various types of leaves and their anatomy, methods of comparison. Pollens: Structure, function, methods of identification and comparison.	L1, L2, L3	6

Prof. (Dr.) Amit Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Module IV: Diatoms and Microbes Diatoms: Nature, location, structure, extraction from various body tissues, including bone marrow, preparation of slides, methods of identification and comparison, forensic significance. Microbes: Types and identification of microbial organisms of forensic significance.	L1, L2, L3	7
Module V: Wildlife Forensics Introduction, importance, protected and endangered species of Animals and Plants. Identification of wildlife materials such as skin, fur, bones, nails, horn, teeth, flowers, and plants, by conventional and modern methods, Identification of Pug marks of various animals. Different methods of poaching of wildlife animals. Types of wildlife crimes. Wildlife (Protection) Act, 1972.	L1, L2, L3	8

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

FCH4409	GOOD LABORATORY PRACTICES SEMINAR	L	T	P	C
Version 1.1	Date of Approval: Dec, 2021	0	0	0	1
Pre-requisites/Exposure					
Co-requisites					

Course Objective:

Students will be introducing to learning the written and oral communication of technical information. Assignments include writing and presenting proposals, reports, and documentation. Emphasis on use of rhetorical analysis, computer applications, collaborative writing, and usability testing to complete technical communication tasks in the workplace.

Course outcome:

The students will be able to

CO1. Explain the technical requirements for lab setup

CO2. Summarize the protocols for the lab setups and procedures.

CO3. Describe the significance of GLP in accreditations of laboratories

Course Contents:	Blooms level	Number of hours
Module I: Technical Writing Process Technical Writing: Scientific and technical subjects; formal and informal writings; formal writings/reports, handbooks, manuals, letters, memorandum, notices, agenda, minutes; common errors to be avoided.	L1, L2	
Module II: Journal Paper Writing Journal paper writing: Abstract for paper and poster, different kind of journal for forensic Sciences, impact factors of journals, ISBN number, Citation, H-index.	L1, L3	
Module III: Documentation Process Writing Skills, Selection of topic, thesis statement, developing the thesis; introductory, developmental, transitional and concluding paragraphs, linguistic unity, coherence and cohesion, descriptive, narrative, expository and argumentative writing. Analytical report, Project management in technical communication, Project writing, project proposal writing.	L1, L3

FCH4405	QUALITY MANAGEMENT AND ACCREDITATION IN FORENSIC SCIENCE LABORATORIES	L	T	P	C
Version 1.1	Date of Approval: Dec, 2021	2	0	0	2
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

This course is intended for the students who have never learned about the quality management and technical requirement in forensic laboratories. A knowledge of the process of accreditation and basic requirements for a testing and calibration laboratory to be accredited is must for the student of forensic science.

Course Objective: The objective of this course is to introduce the students with the Quality management system and requirements for the competence of testing and calibration, the technical requirements needed in a laboratory.

Course Outcomes

On completion of this course, the students will be able to

CO1. Apply the quality management in forensic laboratories.

CO2. Summarize the technical requirements for a forensic laboratory to be accredited.

CO3. Perform sampling, handling of test and calibration items, as well as assuring the quality of test and calibration results and reporting the results in forensic cases.

CO4. Setup the forensic laboratory information management system.

Course Contents:	Blooms level	Number of hours
Module I: Management requirements I General requirements for the competence of testing and calibration laboratories – Introduction, scope, management requirements: Organization, Quality system, Document control, Review of requests	L1, L2	5
Module II: Management requirements II Internal Audits; Control of records, Corrective and preventive actions, Tenders and contracts, Sub-contracting of tests and calibration, Purchasing services and supplies, Service to the clients, Complaints	L1, L2, L3	5
Module III: Technical requirements I Technical requirements: General, Personnel, Accommodation and Environmental conditions, Test and Calibration methods	L1, L2, L3	5
Module IV: Technical requirements II Equipment, measurement traceability, sampling, handling of test and calibration items, assuring the quality of test and calibration results and reporting the results	L1, L2, L3	4
Module V: Laboratory Management Laboratory information management system, Validation and safety equipments	L1, L2, L3, L4	5

*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;
A: Attendance

Suggested Readings:

- International standard on General requirements for the competence of testing and calibration laboratories, First Edn., 1999-12-15, ISO/IEC 17025:1999(E)
- Mario Deva RGAS, The Total Quality Management, NCC Blackwell Publication, (1995).
- Willard Merritt, Dean & settle; Instrumental Methods of Analysis, CBS Publishers & Distributors, 7thEdn. New Delhi, (1986)

FCH4408	FORENSIC PSYCHOLOGY	L	T	P	C
Version 1.1	Date of Approval: Dec, 2021	2	1	0	3
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

This course is intended to give insight of providing the basic knowledge about the human behavior, and its impact on social environment. The students will be able to explain cognitive neuroscience and associated disorders. The course will help the students to understand the concept of intelligence and forensic psychological impact.

Course Objectives:

1. To facilitate the learning of traditional and emergent fields of cognitive neuropsychology.
2. To understand-brain-behaviour relationship in day-to-day life
3. To explore the practical implications of cognitive processes in human performance.

Course Outcomes

On completion of this course, the students will be able to

CO1. Explain the concepts of emergent fields of cognitive neuropsychology.

CO2. Describe brain-behaviour relationship in day to day life

CO3. Apply practical implications of cognitive processes in human performance.

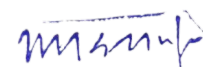

CO4. Analyse impact of intelligence and decision making and language on personal behaviour

Course Contents:	Blooms level	Number of hours
Module-I: Cognitive Neuroscience Introduction, Philosophical antecedents, Emergence of Cognitive psychology, Approaches and key issues, Organization of Nervous system: Cognition in the Brain, Sensation to representation, Theoretical approaches to perception, Deficits in perception. Attention and consciousness	L1, L2	8
Module-II: Memory Models, Processes, Practical Applications of Cognitive Psychology in improving memory processes, Representations and manipulation of knowledge in: Images and Propositions, Spatial cognition and Cognitive map	L1, L2, L3	7
Module-III: Language Nature and Acquisition: Bilingualism and Multilingualism Reading, Bottom-up and Top-down processes, Comprehension, Neuropsychology of Language. Problem-solving and Creativity, Practical applications of cognitive psychology. Decision-making and reasoning: Deductive reasoning and inductive reasoning	L1, L2, L3, L4	9
Module-IV: Intelligence Information possessing and intelligence, alternative approaches to intelligence. Computer simulation, improving intelligence	L1, L2, L3	8

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

FCH4437	MAJOR PROJECT	L	T	P	C
Version 1.1	Date of Approval: Dec, 2021	0	0	0	10
Pre-requisites/Exposure					
Co-requisites					

Course outcome

On completion of this course, the students will be able to

CO1. Explain the recent techniques in the forensic field

CO2. Analyse the samples and compile the data for the research publications

CO3. Apply practical and theoretical knowledge of the Research methodology and the relevant subjects for new findings

CO4. Explain the result in the seminar/ research presentations.

GUIDELINES FOR PROJECT FILE AND PROJECT REPORT

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, considering that initial drafts should be critically analyzed by the faculty guide and corrected by the student at each stage.

PROJECT FILE

The Project File may be a very useful tool for undertaking an assignment along-with a normal semester, an exploratory study, sponsored projects, a project undertaken during summer period or any other period as per curricula where the researcher is working with a company/organization. The project/ assignment may also be a part of the bigger research agenda being pursued by a faculty/ institution/ department

The Project File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation. This file may be considered in continuous assessment.

In general, the File should be comprehensive and include:

- A short account of the activities that were undertaken as part of the project.
- A statement about the extent to which the project has achieved its stated objectives.
- A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project.
- Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project.
- Any problems that have arisen and may be useful to document for future reference.

PROJECT REPORT

The Project Report is the final research report that the student prepares on the project assigned to him. In case of sponsored project, the lay out of the project could be as prescribed by the sponsoring organization. However, in other cases the following components should be included in the project report:

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Title or Cover Page

The title page should contain Project Title; Student's Name; Programme; Year and Semester and Name of the Faculty Guide.

Acknowledgement(s)

Acknowledgment to any advisory or financial assistance received in the course of work may be given. It is incomplete without student's signature.

Abstract

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project. It should not exceed more than 1000 words.

Table of Contents

Titles and subtitles are to correspond exactly with those in the text.

Introduction

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

Materials and Methods

This section should aim at experimental designs, materials used (wherever applicable). Methodology should be mentioned in details including modifications undertaken, if any. It includes organization site(s), sample, instruments used with its validation, procedures followed and precautions.

Results and Discussion

Present results, discuss and compare these with those from other workers, etc. In writing this section, emphasis should be laid on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in textbooks. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow. Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is necessary, do not write in "point" form.

While presenting the results, write at length about the various statistical tools used in the data interpretation. The result interpretation should be simple but full of data and statistical analysis. This data interpretation should be in congruence with the written objectives and the inferences should be drawn on data and not on impression. Avoid writing straight forward conclusion rather; it should lead to generalization of data on the chosen sample.

Results and its discussion should be supporting/contradicting with the previous research work in the given area. Usually, one should not use more than two researches in either case of supporting or contradicting the present case of research.

Conclusion(s) & Recommendations

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

Check that your work answers the following questions:

1. Did the research project meet its aims (check back to introduction for stated aims)?
2. What are the main findings of the research?
3. Are there any recommendations?
4. Do you have any conclusion on the research process itself?

Implications for Future Research

This should bring out further prospects for the study either thrown open by the present work or with the purpose of making it more comprehensive.

Appendices

The Appendices contain material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

References

References should include papers, books etc. referred to in the body of the report. These should be written in the alphabetical order of the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

Examples:

For research article:

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichiacoli*O157: H7. *Clin Microbiol Infect* ,8(suppl 1): 116–117.

For book:

Kowalski, M. (1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), 7: 63-67

The Layout Guidelines for the Project File & Project Report:

1. A4 size Paper
2. Font: Arial (10 points) or Times New Roman (12 points)
3. Line spacing: 1.5
4. Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

ASSESSMENT OF THE PROJECT FILE AND THE PROJECT REPORT

Essentially, the assessment will be based on the quality of the report, the technical merit of the project and the project execution. Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project. Project execution is concerned with assessing how much work has been put in.

The Project should fulfill the following *assessment objectives*:

1. Range of Research Methods used to obtain information
2. Execution of Research
3. Data Analysis (Analyze Quantitative/ Qualitative information)
4. Quality Control
5. Conclusions

Assessment Scheme:

Continuous Evaluation:

40% (Based on punctuality, regularity of work, adherence to plan and methodology, refinements/ mid-course corrections etc. as reflected in the Project File.)

Final Evaluation:

60% (Based on the Documentation in the file, Final report layout, analysis and results, achievement of objectives, presentation/ viva)

It is recommended that the Final evaluation should be carried out by a panel of evaluators.

COMPUTING AND C PROGRAMMING

Course Code: MTH4105

Credit Units: 03

Course Objectives:

The objectives of this course are to acquaint the students with the mathematics involved in basics of computers system, its components, data representation inside computer and to get them familiar with various important features of a procedure-oriented programming language i.e. C.

Course Contents:

Module-I: Data representation: number systems, character representation codes, binary, octal, hexadecimal and their inter conversions, binary arithmetic, floating point arithmetic, header files, static variables, register variables, declaration of variable names, data types and sizes, constants, format specifier, storage class, scope.

Module-II: Arithmetic operators, relational and logical operators, type conversions, increment and decrement operators, bit-wise operators, assignment operators and expressions, conditional expressions; precedence and order of evaluation. if else, nested if.

Module-III: Loops- switch, while and for, do-while. break and continue, go to and labels, Character Input Output Arrays, Character Arrays. Multi-Dimensional Arrays, Basics of Structures, Arrays of Structures, Unions.

Module-IV: Basics of functions, functions arguments block structures, recursion, pointers, function arguments, call by value, call by reference pointers and arrays functions, pointer arrays, pointers to pointers, command line arguments, strings operation.

C PROGRAMMING LAB

Course Code: MTH4106

Credit Units: 01

Software Required: Turbo C

Course Contents:

1. Some basic programs to understand the working of C language.
2. Programs involving conditional operator like if-end, elseif-end
3. Programs involving nested if-else-end
4. Programs involving multiple selections using switch statement
5. Programs involving loops like while and do while.
6. Programs involving for loops.
7. Programs involving user defined function calls.
8. Programs involving arrays and matrices
9. Programs involving strings
10. Programs involving structures
11. Programs involving Unions
12. Programs involving pointers, and solving various problems with the help of those.
13. Programs involving file handling

OPERATIONS RESEARCH

Course Code: MTH4217

Credit Units: 04

Course Objectives:

The problems in optimization are the most common applications of mathematics. The main aim of this course is to present different methods of solving optimization problems in the areas of linear programming, nonlinear programming, and integer linear programming. In addition to theoretical treatments, there will be some introduction to numerical methods for optimization problems.

Course Contents:

Module-I: Review Introduction to Operation Research, Linear programming problem and its formulation, convex sets and their properties, graphical method, basic feasible solution, simplex method, big-M and two phase methods; infeasible and unbounded LPPs, alternate optima; Dual problem and duality theorems, dual simplex method and its application in post optimality analysis; Sensitivity Analysis, Balanced and unbalanced transportation problems, Vogel's approximation method for solving transportation problems; Hungarian method for solving assignment problems.

Module-II: Dynamic Programming Bellman's Principle of optimality of Dynamic Programming, Multi- stage decision problem and its solution by Dynamic Programming with finite number of stages, Solution of linear programming problems as a Dynamic Programming problem.

Module-III: Integer Linear Programming Problems: Integer Linear Programming Problems, Mixed Integer Linear Programming Problems, Cutting Plane Method, Branch and Bound method.

Module-IV: PERT and CPM: Basic idea of PERT & CPM, Difference between PERT & CPM, PERT/CPM network components and precedence, Relationship critical path analysis, Project Scheduling, Project Time Cost, Trade Off, Resource allocation.

TOPOLOGY

Course Code: MTH4205

Credit Units: 04

Course Objectives:

Topology is a modern branch of geometry. It serves to lay the strong foundations of concepts for study in analysis and in geometry. It is also a prerequisite for many concepts related to Analysis. The course is designed to develop an understanding of topological ideas & techniques and their role in analysis.

Course Contents:

Module-I: Introduction: Finite, countable, uncountable sets, functions, relations, axiom of choice, Zorn's Lemma. Schroder Bernstein theorem.

Module-II: Topological Spaces and Continuous Functions: Open sets, closed sets, basis for a topology, sub basis, T1 and T2 spaces, order topology, product topology, subspace topology, limit point, continuous function, general product topology, metric space and its topology, quotient topology.

Module-III: Connectedness and Compactness: Connected spaces, connected subspaces, local connectedness, compact subspace, limit point compactness, local compactness.

Module-IV: Countability and Separation Axioms: Countability axioms, separation axioms, regular and normal spaces, Urysohn's Lemma, Urysohn Metrization Theorem, Tietze Extension Theorem, Tychonoff Theorem.

STATISTICS BASED LAB-I

Course Code: MTH4206

Credit Units:01

MTH4206		L	T	P	C
Version		0	0	2	1
Pre-requisites/Exposure	Basics knowledge of Statistics				
Co-requisites					

Course Objectives:

The objective of this Lab work is to acquaint students to use statistical software in computation and interpretation of various statistical results.

1. To plot the histogram, pi-chart, scatter plot and bar-chart etc.
2. To find the measure of arithmetic mean, geometric mean, and harmonic mean of the given data.
3. To find the measure of median and mode of the given data.
4. To find the measure of Range, Quartile deviation, Mean deviation.
5. To find the measure of standard deviation and variance of the given data.
6. To measurement of moments.
7. To measurement Skewness & Kurtosis.
8. To check the linear relationship between two variables using correlation coefficient.
9. To check the non-linear relationship between two variables using correlation coefficient.
10. To find the lines of best fit used for predictions by using the regression analysis.

INTRODUCTION TO MATLAB

Course Code: MTH4215

Credit Units: 03

Course Objectives:

The objectives of the course are to familiarize the students with the main features of the MATLAB integrated design environment. Students will learn concepts related to programming in MATLAB and they will also get to the exposure to use few built-in functions to solve many practical problems.

Course Contents:

Module-I: Introduction to MATLAB and Plotting: vector and matrix generation, subscripting and the colon notation, matrix and array operations and their manipulations, introduction to some inbuilt functions. Two & three-dimensional graphics: basic plots, change in axes and annotation in a figure, multiple plots in a figure, saving and printing figures, mesh plots, surface plots and their variants.

Module-II: m-Files: scripts and user defined functions, calling functions into a script file, sub-functions, and nested functions, concept of local and global variable, few examples of in-built functions, editing, saving m-files.

Module-III: Loops and Conditional statements: Flow control using various statements and loops including For-End and While-End loops with Break commands. Conditional Statements: If-End statement, If-Else-End statement, nested If-Else-End statements.

Module-IV: Applications of MATLAB: Solving a linear system of equations including over determined and system with infinitely many solutions. Calculus of polynomials using inbuilt functions, Solving equations in one variable, Solving IVPs using inbuilt functions.

MATLAB PROGRAMMING LAB

Course Code: MTH4216

Credit Units: 01

Course Objectives:

MATLAB is a scientific computing tool which covers almost all area of science and engineering. Students will be using MATLAB environment to solve various types of mathematical problems.

Course Contents:

Fundamentals of Linear Algebra, Numerical Analysis, Differential Equations and their application using MATLAB :

1. Generating arrays and matrices and their manipulations
2. Eigenvalues & Eigenvectors of various type of matrices
3. Using built-in functions to solve system of equations
4. Functions related to plotting 2D and 3Dplots
5. Introducing built-in functions for numerical approximations
6. Annotation of Plots
7. Writing m files including script and function files
8. Introducing notion of sub-functions and nested functions
9. Solving IVPs using ode45 and other solvers
10. Solving system of equations of IVPs

NUMERICAL ANALYSIS

Course Code: MTH4325

Credit Units: 03

Course Objectives:

The objectives of this course are to introduce some advanced numerical methods, commonly used in research to the post graduate students. Student will be introduced to numerical techniques for solving algebraic and transcendental equation, Interpolation of polynomial, Differentiation, Integration and ordinary differential equations.

Course Contents:

Module-I: Solution of Algebraic and Transcendental Equations: Bisection method, Regula-Falsi method, Iteration method, Newton Raphson method, Newton Raphson method for multiple roots, Secant method as an improvement on Newton Raphson method, and Muller's method, Graeffe's Root Square Method. Convergence and error analysis of these methods.

Module-II: Finite differences, interpolation and approximation: Finite difference operators, their properties and their interrelations, problems based on finite difference tables, Newton's forward and Newton's backward interpolation formula, various central difference formulae including Stirling's formula, Bessel's formula and Cubic -Spline interpolation. Divided differences: Operators and difference table, Newton's divided difference formula, Lagrange's interpolation formula.

Module-III: Solution of system of linear equations:

Direct methods: Cramer's rule, Matrix inverse method, Gauss elimination and Gauss-Jordan method, LU decomposition method. Iterative methods: Jacobi's method, Gauss-Seidel method and their convergence criterion. Concept of ill-conditioning, and condition number for system of equations.

Module-IV: Numerical Differentiation and Integration: Numerical differentiation using Newton's forward and backward formula, order of leading error terms. Newton-Cotes quadrature formula - derivations & comparison of Trapezoidal rule, Simpsons 1/3 and 3/8 rules. Error analysis of these methods. Numerical solution of first order differential equations: Euler's method, modified Euler's method, Predictor-Corrector Method, Runge-Kutta second order and fourth order methods, their derivations and their extension to solve system of IVPs.

NUMERICAL ANALYSIS LAB

Course Code: MTH4327

Credit Units: 01

Softwares required: Turbo C and MATLAB

Course Objective:

The objective of the course is to explain the most common numerical methods used in engineering analysis, when to use each method, and how to implement basic methods in a structured manner using MATLAB's programming language.

Course Contents:

Module-I: Roots of Transcendental Equations: Programs for Initial approximation for roots, Bisection method, Regula-Falsi method, Iterative method, Newton Raphson method, Secant method. Comparison of these methods. How to use built-in functions to find the roots of Transcendental Equations.

Module-II: System of Linear Equations: Programs for Jacobi method, Gauss-Seidal method, their comparative study using various stopping criterion. Programs for forward and back substitution, LU decomposition method, and using built in functions for system of equations.

Module-III: Programs for Numerical Differentiation, Programs for trapezoidal rule, Simpson's 1/3 and 3/8 rule and their comparison. Using built-in functions for both numerical differentiation and numerical integration.

Module-IV: Programs for solving IVPs for Euler's method and its variants. How to use built in functions for solving IVPs and how to extend the code for solving system of IVPs.

Summer Workshop

Course Code: MTH4335

Credit Units: 03

Workshop will be conducted for one-week (six hours per day). The content of the course will be intended to give an exposure to

- Technical softwares /tools related to scientific computing and statistics.
- Report writing, Presentation etc.

The students will have to appear for class-test(s) during the workshop.

- During summer break, students have to work on the assignment(s) given to them.
- The assignment(s) will have to be submitted within two weeks of commencement of new semester followed by viva-voce.
- The evaluation will be done by the committee comprising of faculty members who served as resource persons in the workshop.

Evaluation scheme:

Components	Attendance	Assignment(s)	Class test(s)	Viva-voce

NUMBER THEORY & CRYPTOGRAPHY

Course Code: MTH4329

Credit Units: 04

Course Objectives:

The course provides an introduction to basic number theory, where the focus is on computational aspects with applications in cryptography. Moreover, the course provides an introduction to some basic cryptographic techniques to understand fundamental mathematical concepts underlying digital signatures, public key encryption, and key establishment protocols.

Course Contents:

Module-I: Euclid's division lemma, Divisibility, The Linear Diophantine Equation, the fundamental theorem of Arithmetic, Fermat's Little theorem, Wilson's Theorem, Generating functions. Congruences, Residue Systems, The Theorems of Fermat and Wilson Revisited, The Chinese Remainder Theorem.

Module-II: Combinatorial Study of $\phi(n)$, Formulae for $d(n)$ and $\sigma(n)$, Multiplicative Arithmetic Functions, The Mobius Inversion Formula, Primitive Roots Modulo p , Tchebychev's Theorem. Euler's Criterion, the Legendre Symbol, The Quadratic Reciprocity Law, Consecutive Residues and Non-residues.

Module-III: Cryptographic Hash Functions Hash functions and data integrity, security of Hash functions, The random oracle model, algorithms in random oracle model, comparison of security criteria, Compression functions from encryption functions, Hash functions from compression functions.

Module-IV: Public Key Cryptography and Discrete Logarithms Finite fields, construction, The Elgamal crypto system, RSA public key crypto system, algorithms for discrete logarithm problems, Shanks Baby step Giant step algorithms, The pollard algorithm, factoring algorithms, attacks on RSA, security of Elgamal system, The Deffe Hellman key exchange problems, Digital signature algorithms using RSA, secrete key sharing principles, The Shamir Secret sharing protocol.

FLUID DYNAMICS

Course Code: MTH4409

Credit Units: 04

Course Objectives:

Almost everything on this planet is either in a state of fluid or moves within or near a fluid. Fluids have the ability to transport matter and its properties as well as transmit force. The main objectives of the course are to develop fundamental knowledge and understanding of the mechanics of fluid both at rest and in motion.

Course Contents:

Module 1: Introduction

Definition: Fluid, Fluid Dynamics, Stress (shear stress and normal stress), strain, viscosity (dynamic and kinematic). Variation of viscosity with temperature for liquids and gases. Continuum hypothesis, No-slip boundary condition, application areas of fluid dynamics.

Kinematics: Different types of forces: Viscous and inertial forces

Some common non-dimensional parameters and their physical significance: Reynolds number, Froude number and Mach number. (12 lectures)

Module 2: Newton's law of viscosity, Classification of fluids: Newtonian and Non-Newtonian fluid, compressible and incompressible fluid. Inviscid, ideal and real fluid. Different types of flow: Uniform and non-uniform, steady and unsteady, rotational and irrotational flow, Laminar, Turbulent and Transient flow. Flow description: Eulerian and Lagrangian description of fluid motion. Fluid element trajectories: Streamline, pathline, streakline, timeline. (12 lectures)

Module 3: Introduction to Tensors: Definition, rank of tensor, Einstein notation or indicial notation, free and dummy indices. Vector operations and calculus operations using index notation (Einstein notation).

Cauchy stress tensor, deviatoric stress tensor, volumetric stress tensor.

Deformation of fluid-elements: derivation of rate of translation vector, rate of rotation, vorticity vector, linear strain rate, strain rate tensor, deformation tensor. (12 lectures)

Module 4: Bernoulli's equation - assumptions and applications.

Differential Analysis: Differential equations of mass and momentum for incompressible flows: inviscid - Euler equation and viscous flows - Navier-Stokes equations, concept of fluid rotation, vorticity, stream function, Exact solutions of Navier-Stokes equation for Couette Flow and Poiseuille flow. (12 lectures)

PROJECT

Course Code: MTH4437

Credit Units: 06

GUIDELINES FOR PROJECT REPORT: The Project Report is the final research report that the student prepares on the project assigned to him/her. The following components should be included in the project report:

- 1) **Title or Cover Page:** The title page should contain Project Title; Student's Name; Programme; Year and Semester and Name of the Faculty Guide.
- 2) **Acknowledgement(s):** Acknowledgment to any advisory or financial assistance received in the course of work may be given. It is incomplete without student's signature.
- 3) **Abstract:** A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project.
- 4) **Table of Contents:** Titles and subtitles are to correspond exactly with those in the text.
- 5) **Introduction:** Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.
- 6) **Results and Discussion:** Present results, discuss and compare these with those from other workers, etc. In writing this section, emphasis should be laid on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books.
- 7) **Conclusion(s) & Recommendations:** A conclusion should be the final section in which the outcome of the work is mentioned briefly. Check that your work answers the following questions: Did the research project meet its aims (check back to introduction for stated aims)? What are the main findings of the research? Are there any recommendations?
- 8) **References:** References should include papers, books etc. referred to in the body of the report. These should be written in the alphabetical order of the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system

The Layout Guidelines for Project Report:

- 1) A4 size Paper
- 2) Font: Arial (10 points) or Times New Roman (12 points)
- 3) Line spacing: 1.5
- 4) Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3cm

Assessment Scheme: Continuous Evaluation: 40% (Based on punctuality, regularity of work, adherence to plan and methodology, refinements/ mid-course corrections etc. as reflected in the Project File.)

Final Evaluation: 60% (Based on the Documentation in the file, Final report layout, analysis and results, achievement of objectives, presentation/ viva)

It is recommended that the Final evaluation should be carried out by a panel of evaluators.

CLASSICAL MECHANICS

Course Code: MTH4410

Credit Units: 04

Course Objectives:

A detailed exposition of classical mechanics for the student, opting for physics is so vitally important for a clear understanding of recent intricate theories of quantum mechanics, modern physics and research for they are built on a well developed and conceptualized foundation.

Course Contents:

Module-I: Lagrangian Formulation Mechanics of a system of particles, constraints, D'Alembert's principle, Variational calculus and its applications, Lagrangian equations, conservation theorems and symmetry properties, applications of Lagrangian formulation.

Module-II: Central Force Problem Reduction to one body problem, equation of motion and first integral, one dimensional problem and classification of orbits, Differential equation for the orbit, Kepler problem and planetary motion, Rutherford formula, scattering in central force field, transformation to laboratory frames.

Module-III: Rigid Body and Vibrating System Euler angles, tensor of inertia, kinetic energy of a rotating body, symmetric top and applications. Vibrating string, solution wave equation, normal vibrations, dispersion, coupled vibrating system. Non linear Dynamics, phase trajectories.

Module-IV: Hamiltonian Formulation Hamiltonian equation of motion, Hamilton's equation in different co-ordinate systems example in Hamiltonian dynamics, two dimensional harmonic oscillator the equations of canonical transformations, cyclic coordinates, phase space and Liouville's theorem, Poisson bracket. Lagrange brackets, general Poisson bracket under canonical transformation.

BIOMECHANICS

Course Code: MTH4412

Credit Units: 04

Course Objectives:

The objectives of this course are to study the mechanics of flow of blood in human beings and movement of insects, spread of viruses etc by using mathematical tools like ordinary differential equation, partial differential equation, Calculus of variation, Laplace Transforms etc.

Course Contents:

Module-I: Mathematical Aspects of population biology; Some fundamental aspects, Models and their mathematical formulations, Single species models, Stability and classification of equilibrium points, Relationship between eigen values and critical points.

Module-II: Introduction to Biological Fluid Mechanics: Basic concepts of Fluid Dynamics, Fluid Parameters, Viscosity, Navier- Stokes Equations of viscous fluid motion, Poiseuille's flow, Model for blood flow, Properties of blood, Pulsatile Flow of blood sedimentation.

Module-III: Modeling through partial differential equations: simple models, mass balance equations, Variational principles, probability generating function, traffic flow problems, initial & boundary conditions.

Module-IV: Study of alcohol in the blood stream; Volume of blood in human body; Stochastic epidemic model; Genetic graphs; Food webs: Linear programming in forest management; Mathematics in fisheries; Case studies on anchovy wipe out.

STOCHASTIC PROCESSES

Course Code: MTH4414

Credit Units: 04

Course Objectives:

To introduce the basic concepts of stochastic processes.

Course Contents:

Module-I: Poisson Process: Inter-arrival and waiting time distributions, conditional distributions of the arrival times, non-homogeneous Poisson process, compound Poisson random variables and Poisson processes, conditional Poisson processes.

Module-II: Markov Chains: Introduction and examples, Chapman-Kolmogorov equations and classification of states, limit theorems, transitions among classes, the Gamblers ruin problem, mean time in transient states, branching processes, applications of Markov chain, time reversible Markov chains, semi Markov processes.

Module-III: Continuous-Time Markov Chains: Introduction, continuous time Markov chains, birth and death processes, The Kolmogorov differential equations, limiting probabilities, time reversibility, applications of reversed chain to queueing theory.

Module-IV: Brownian Motion and other Markov Processes: Introduction, hitting time, maximum variable, Arc sine laws, variations on Brownian motion, Brownian motion with drift, backward and forward diffusion equations.

STATISTICAL INFERENCE

Course Code: MTH4415

Credit Units: 04

Course Objectives:

To introduce the concepts of statistical inference.

Course Contents:

Module-I: Point estimation. Characteristics of a good estimator: Unbiasedness, consistency, sufficiency and efficiency. Method of maximum likelihood and properties of maximum likelihood estimators (without proof). Method of minimum Chi-square. Method of Least squares and method of moments for estimation of parameters. Problems and examples.

Module-II: Sufficient Statistics, Cramer-Rao inequality and its use in finding MVU estimators. Statistical Hypothesis (simple and composite). Testing of hypothesis. Type I and Type II errors, significance level, p-values, power of a test. Definitions of Most Powerful (MP), Uniformly Most Powerful (UMP) and Uniformly Most Powerful Unbiased (UMPU) tests.

Module-III: Neyman-Pearsons lemma and its applications for finding most powerful tests for simple hypothesis against simple alternative. Tests based on t, F and X^2 distributions.

Module-IV: Likelihood ratio tests and their reduction to standard tests. Large sample tests. Interval estimation, Pivotal quantity and its use in finding confidence intervals, concept of best confidence intervals.

NUMERICAL SOLUTIONS TO ODE AND PDES

Course Code: MTH4416

Credit Units: 04

Course Objectives:

The course covers few classical and contemporary methods for solving initial and boundary value problems. Finite difference operators and their application to solve various types of PDEs shall be introduced in the course.

Course Contents:

Module-I: Iterative solvers for nonlinear equations and system of linear equations: Iterative method and Newton's method for system of nonlinear equations; Iterative methods to solve system of linear equations including Gauss-Seidel and Jacobi's method with pivoting; Concept of norms and condition number; Application of these methods for test problems using MATLAB codes.

Module-II: Initial value Problems Single-step methods: General definitions and Lipschitz condition, Derivations and stability analysis for Taylor series method, Euler's method and its variants, Runge-Kutta second order and fourth order methods; Implementation of these methods for various test problems using MATLAB.

Module-III: Initial value Problems Multi-step methods: General definitions and derivations of Adams Bashforth, Adams Moulton methods, Predictor-corrector method; stability analysis of these methods and application of these methods for some test problems using MATLAB.

Module-IV: Introduction to Finite difference methods General concepts of truncation error and stability for a finite difference scheme; Numerical solution of one-dimensional heat equation, including Explicit Euler, Backward Euler, Crank-Nicolson schemes with various type of boundary and initial conditions; Laplace Equations and Poisson's equations with different type of boundary and initial conditions.

MATERIALS SCIENCE & TECHNOLOGY

Syllabus - Semester First

FUNDAMENTALS OF MATERIALS SCIENCE

Course Code: PHY2151

Credit Units: 03

Course Objective:

The objective of this course is to introduce the students with the basics of the materials science and physical phenomenon.

Course Contents:

Module-I: Basics of Crystal Structure

Space lattice and unit cells, Crystal system, Symmetry operation, Structures of common metallic and ceramic materials, Packing fraction, coordination number, Crystallographic points, directions and planes, Linear and planar densities, Structure determination using X-ray diffraction and Braggs law, single crystal and polycrystalline materials, non-crystalline materials and glass transition temperature,

Module-II: Bonding in Solids and Imperfections

Forces between Atoms: Mechanism of Bond Formation and Bond Energy, Primary bonding in solids viz. ionic, covalent and metallic bonds, Secondary bonding, Perfect and imperfect crystal, Point defects in metals and ceramics, Frenkel and Schottky defects, Color centres, Dislocations: edge and screw dislocation, Interfacial defects, Volume defects,

Module-III: Diffusion and Alloy Systems

Diffusion and its types, Diffusion mechanisms, Diffusion Coefficient: Fick's Laws of Diffusion, Factors affecting diffusion, Applications of diffusion, Alloy systems, Solid solutions: Substitutional and Interstitial, The families of engineering alloys, Hume-Rothery's Rules, Intermediate solid solutions.

Module-IV: Phase diagrams and phase transformation

Phase, Phase equilibrium, Phase rule, Unary and binary phase diagrams, Interpretation of phase diagrams, Phase diagrams of some important metals and ceramics, microstructure changes during cooling, lever rule, invariant reactions, iron-iron carbide phase diagram. Phase transformation, Nucleation and growth of phases, Introduction to TTT curves, heat treatment processes

Syllabus - Semester Second

CLASSIFICATION & SELECTION OF MATERIALS

Course Code: PHY2251

Credit Units: 03

Course Objective:

The objective of the course is to introduce and familiarize the students with the different classes of engineering and advanced materials to the students.

Course Contents:

Module-I: Metals and Alloys

Metals, Alloys (ferrous and non-ferrous), types of steel, cast iron, High temperature steels, properties and applications.

Aluminum and its alloys- physical, chemical and mechanical properties, magnesium, titanium alloys - microstructural features, properties and applications.

Copper and its alloys: classification, physical, chemical and mechanical properties; lead, tin, zinc, silver, gold alloys - microstructural features - properties and applications.

Module-II: Ceramics and glasses

Ceramics: bonding, crystal structure and defects; structure of silicates; polymorphic transformations.

Non crystalline materials - structure, requirement for glass formation, Zachariasen rules, viscosity based transition points, devitrification; glass forming methods; Unary; binary and ternary systems.

Module-III: Composites and Polymers

Composites: Introduction, classification, bonding and failure criteria. Reinforcing materials, different processing methods, novel applications.

Polymers: Introduction, comparison with metals and ceramics - classification, Polymerization, molecular weight determination, Properties, processing and applications.

Module-IV: Advanced materials

Biomaterials: Introduction, need for biomaterials; Property requirements; Metallic, ceramic and polymeric implants, composites as biomaterials; applications.

Superalloys, Iron, nickel and cobalt based superalloys, Shape memory alloys, low temperature materials.

Nano materials – Concept, scale /dimensional aspects, materials and coatings for wear resistance.

PROPERTIES OF MATERIALS

Course Code: PHY2351

Credit Units: 03

Course Objective:

The objective of the course is to study the properties of the materials to be used in the different applications and to introduce the students to the basics of the structure property correlation in the materials

Course Contents:

Module-I: Mechanical behavior

Concept of stress and strain, tensile strength, compressive strength, yield point phenomenon, Elastic behavior of materials, elastic modulus, Anelastic and Viscoelastic behaviour, strengthening mechanism, work hardening, solid solution hardening, precipitation hardening, hardness, Failure mechanisms: fracture, creep and fatigue.

Module-II: Electrical and dielectric properties

Electricity conductivity, density of states, Fermi energy, Band theory of solids, metals, Semiconductors, Insulators, Semiconductors: Intrinsic and Extrinsic semiconductors, Factors affecting carrier mobility, hall-effect, carrier concentration of semiconductors

Dielectric Behavior: Capacitance, Types of Polarization, Frequency Dependence of the Dielectric Constant, Dielectric Strength, Ferroelectricity, Piezoelectricity, pyro-electricity Applications

Module-III: Magnetic and Optical properties

Introduction, Dia, Para Ferro, Antiferro and Ferrimagnetic materials. Effect of temperature on magnetic behavior, Domains and hysteresis, Soft and Hard magnetic materials. Application.

Optical properties: Light Interactions with Solids, Atomic and Electronic, Interactions, Optical properties of nonmetals, Opacity and translucency in insulators, Luminescence, LEDs, lasers, Light propagation in optical fibers

Module-IV: Thermal Properties and corrosion resistance

Introduction, Heat capacity, thermal expansion, Materials of Importance: Invar and Other Low-Expansion Alloys, Thermal Conductivity, Thermal Stresses

Introduction, Corrosion rates, Passivity, Environmental effects, Cause and Types of corrosion, Corrosion of ceramics and polymers, Corrosion Prevention.

Syllabus - Semester Fourth

MANUFACTURING PROCESSES FOR MATERIALS

Course Code: PHY2451

Credit Units: 03

Course Objective:

The different industrial processes used for the fabrication and preparation of the materials is introduced in this course.

Course Contents:

Module-I: Introduction to manufacturing processes

different approaches – technical and economic considerations – significance of material properties with respect to selection of manufacturing process

Module-II: Processing techniques

Conventional casting processes – advantages and limitations – melting practices – design of castings – special casting processes

Powder processing: pre-consolidation-shape forming processes; Fundamental Sintering mechanisms, various advanced sintering techniques.

Module-III: Fabrication of materials

Fabrication of materials by Rolling; forging; extrusion; drawing - sheet metal forming. Classification of rolling, extrusion, drawing, advantages and limitations of different fabrication processes.

Module-IV: Conventional material joining processes

Conventional material joining processes – concept of weldability – need for dissimilar joints- machining processes – concept of machinability – material examples – developments in machining processes

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Exam; A: Attendance

Syllabus - Semester Fifth

MATERIALS TESTING & CHARACTERIZATION

Course Code: PHY2551

Credit Units: 03

Course Objective:

The objective of the course is to introduce different materials testing and characterization techniques to the students.

Course Contents:

Module-I: Introduction and Spectroscopic methods

Introduction: Comparison of major techniques, Advantages and disadvantages; Spectroscopic methods: Atomic absorption spectrometry, Atomic fluorescence spectrometry, UV-Visible spectroscopy; Raman spectroscopy, Fourier transform infrared spectroscopy, XPS, UPS, Auger electron spectroscopy.

Module-II: X-ray techniques and Optical Microscopy

X-ray techniques: XRD, X-ray fluorescence spectroscopy, Wavelength dispersive spectroscopy (WDS); Energy dispersive spectroscopy (EDS),
Optical Microscopy: Image formation, Resolution, Aberrations, Imaging modes, Specimen preparation, Confocal microscopy

Module-III: Electron microscopy and Thermal analysis

Electron microscopy: Scanning electron microscopy; Transmission electron microscopy, Electron diffraction, Scanning tunneling microscope, Atomic force microscope
Thermal analysis: Thermo gravimetric analysis, Differential thermal analysis, Differential scanning calorimetry, Dynamic mechanical analysis, Thermo-mechanical analysis

Module-IV: Electrical, magnetic and non-destructive testing

Electrical and magnetic properties: Two probe and four probe methods for electrical characterization, Vibrating sample magnetometer (VSM),
Non-destructive testing: Radiography, Ultrasonic, Acoustic emission, Thermography, Holography, Basic principles, Applications in airframe and rock.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Exam; A: Attendance.

Syllabus - Semester Sixth

MATERIALS AT NANOSCALE

Course Code: PHY2651

Credit Units: 03

Course Objective:

The main objective of the course is familiarize the students to the exciting area of the nanotechnology and preparation, characterization of change in the materials properties at the nanoscale.

Course Contents:

Module-I: Introduction to Nano world:

Introduction to Nanostructures: Carbon Nanotubes (CNT), Graphenes, Fullerenes, Nano Peapods, Quantum Dots and Semiconductor Nanoparticles Metal-based Nanostructures (Iron Oxide Nanoparticles) Nanowires, Polymer based nanostructures including dendrimers, Introduction to metal based nanostructures, Protein-based Nanostructures: Nanomotors etc.

Module-II: Structure, properties and Bonding in Nanomaterials:

Chemical Bonds (types and strength) Intermolecular Forces Molecular and Crystalline Structures, Hierarchical Structures, Bulk to Surface transition, surface reconstruction, Mechanical, Electronic, Optical, Magnetic and Thermal properties.

Module-III: Synthesis & Methods of preparation of nanomaterials:

Bottom -up Synthesis, Top-down Approach: Precipitation, Mechanical Milling, Colloidal routes, Self-assembly, Vapour phase deposition, MOCVD Sputtering, Evaporation, Bio-inspired synthesis, Nanocomposite fabrication, Nanolithography, Molecular Beam Epitaxy, Atomic Layer Epitaxy, MOMBE etc.

Module-IV: Applications

Nano-electronics, Nano optics, Nanoscale chemical-and bio-sensing Biological/biomedical applications, Photovoltaic, fuel cells, batteries and energy-related applications, High strength nanocomposites, Nanoenergetic materials

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE

PHARMACEUTICALS

Syllabus - Semester First

COSMETIC FORMULATION

Course Code: CHY2152

Credit Units: 03

Course Objective:

This course is intended to provide a comprehensive survey of ingredients fundamental to the cosmetic industry. The course will emphasize current trends in the selection of cosmetic ingredients. The chemistry and technology of cosmetic raw materials will be related to their behavioral properties as utilized in the construction of stable functional systems. In this way, it is intended to generate a better understanding of the contributions of ingredients to the performance of finished product formulations. Emphasis will be placed on recognizing and dealing with problem areas associated with the use of various ingredients. Safety considerations and other pertinent matters which can influence ingredient selection will be included in these discussions.

Course Content:

Module I:

Classification of raw materials and raw materials used in the cosmetic industry for the manufacture of finished products. Method of sampling, Indian Standard specification laid down for sampling and testing of various cosmetics in finished form by the bureau of Indian standards. Factors affecting stability of a formulation, ICH guidelines, Methods of stabilizations and Methods of stability testing. Concept of development of stability indicating analytical methods.

Module II:

Determination of Physical and chemical constants such as extractive values, moisture content, alcohol content, volatile oil content, ash values, bitterness values, foreign matters, and physical constants applicable to the lipid containing drugs. Microbial counts, bioburden and Pharmacopoeial microbial assays.

Module III:

Brief introduction of the following cosmetic preparation and a detailed study on their quality control: Shampoo, Tooth paste, skin powder, skin creams, hair creams, nail polish, after shave lotion, bath and toiletries, lipstick and hair dyes, perfumes, depilatories.

Module IV:

Packaging of cosmetics –Filling of solids, semisolids & liquids. Materials used for cosmetic packaging Rules & regulations and legal provisions for packaging & labeling.

Syllabus - Semester Second

INDUSTRIAL MANAGEMENT AND SAFETY PROCESSES

Course Code: CHY2252

Credit Units: 03

Course Objective:

The curriculum is developed to help the students understand the basic functions & responsibilities of a manager, provide him tools and techniques of managing different activities of the business concerned and to understand & interpret the provisions of some of the important provisions related to patent, trademark etc. It also aims at minimizing the chances of risks, injuries and accidents by implementing risk management techniques and safety management operations, monitoring the operating systems and bolstering the safety measures of an industry in general. With the rise of natural disasters in and around our world, the importance of the safety of human capital, protection of the environment and conservation of existing assets of an industry is increasing, leading to growing relevance of these skills.

Course Contents:

Module I:

Basic Concepts of Management Function of Management

Planning, Organizing, Directing, Control, Decision-making, Budgeting, Inventory Management (IM) & Quality Control (QC), Meaning & Importance of Inventory management, Inventory models, Cost consideration, Economic order quantity model.

Quality Management

Meaning & definition of Quality-Quality control systems-quality assurance-planning for quality- total quality management (TQM) philosophy-implementation of TQM in service and manufacturing industries-national & international standards.

Module II:

Manufacturing Management

Production planning & control, dynamics of material flow-inventory-bottlenecks and process variability, planning levels and time scales, forecasting-aggregate planning, synchronized manufacturing and theory of constraints-just in time production-shop floor performance monitoring.

Module III:

Safety in Chemical Process Industries

Safety in industries; need for development; importance safety consciousness in Indian chemical industry; safety programmes, elements of safety programme; effective realization, economic and social benefits. Industrial safety- Chemical process industries; potential hazard; chemical and physical job safety analysis; high pressure; high temperature operation; dangerous and toxic chemicals; highly radioactive materials; safe handling and operation of materials and machineries; planning and layout.

Syllabus - Semester Third

DRUG DESIGN

Course Code: CHY2352

Credit Units: 03

Course Objective

The Principles of Drug Design course aims to provide students with an understanding of the process of drug discovery and development from the identification of novel drug targets to the introduction of new drugs into clinical practice. It covers the basic principles of how new drugs are discovered with emphasis on lead identification, lead optimization, classification and kinetics of molecules targeting enzymes and receptors, prodrug design and applications, as well as structure-based drug design methods. Recent advances in the use of computational and combinatorial chemistry in drug design will also be presented. The course is further enhanced with invited lectures on recent developments and applications of drug design principles in the pharmaceutical industry.

Course Content:

Module I:

Introduction- Definition of drug (WHO), classification of drugs, nomenclature of drugs, stereochemical aspects of drugs, definitions of terms commonly used in the chemistry of drugs, routes of drug administration and different dosage forms and applications. Introduction to phase trials in drug development.

Module II:

Structure Activity Relationships in drug design-Structure based drug design, ligand based drug design. Some case studies e.g. development of ciprofloxacin, antidiabetics and recent cephalosporins. Target selection and lead identification, Natural product sources, Fermentation / Microbial sources, Synthetic, Introduction to Pharmacogenomics. Methods of conformational search used in pharmacophore mapping; catalyst/, etc. with practical examples, ADME databases.

Module III:

Molecular Modeling- Energy minimization, geometry optimization, conformational analysis, Approaches and problems; Bioactive vs. global minimum conformations; Mechanism based Drug Design including Quantum Mechanics Automated methods of conformational search; Molecular graphics.

Module IV:

QSAR-Electronic effects; Hammett equation, Lipophilicity effects; Hansch equation, Steric Effects; Taft Equation; Experimental and theoretical approaches for the determination of physico-chemical parameters, parameter inter-dependence; Case studies; Regression analysis, extrapolation versus interpolation, linearity versus non-linearity; Free Wilson Analysis; The importance of biological data in the correct form; 2D – QSAR; 3D-QSAR-examples CoMFA and CoMSIA.

Module V:

Molecular docking and dynamics-Rigid docking, flexible docking, manual docking; Advantages and disadvantages of flex-X, flex-S, autodock and dock softwares with successful examples; Monte Carlo simulations and molecular dynamics in performing conformational search, docking etc. De novo drug design techniques.

APPLICATION OF NANOTECHNOLOGY IN MEDICINE

Course Code: CHY2452

Credit Units: 03

Course Objective:

This course will focus on developing students' understanding of the fundamental properties, as well as synthesis and characterization of nanomaterials, coupled with their applications in nanomedicine. This course also provides a realistic approach and covers the basic concepts of chemistry, physics and biology in the behavior of molecules and molecular interaction. It also includes various experimental techniques used to characterize bio-nano systems, the nano scientific principle involved in the processing, fabrication and manipulation of nanostructures and nanoparticles.

Course Content:

Module I:

Introduction to nanomedicine-Overview of nanotechnology from medical perspective, different types of nanobiomaterials and their biomedical applications, and cell nanostructure interactions, Synthesis, characterization, and properties of smart nanomaterials, Surface modification/bio functionalization of nanomaterials

Module II:

Nanocarriers (e.g. liposomes, polymer capsules, polymer nanoparticles, porous materials, nanogels, dendrimers, microemulsions, inorganic nanoparticles, carbon nanotubes, lipoproteins, solid lipid nanoparticles) for drug delivery applications, Stimuli-responsive smart nanomaterials, Nanomaterials in different imaging (e.g.fluorescence and MRI) applications

Module III:

BioMEMS, Lab-on-a-Chip, nano/microfluidics, biosensors, Regenerative medicine, including tissue engineering, cell and gene therapy, DNA-based nanostructures, Cellular nanomachines, Toxicology of nanomaterials

Examination Scheme:

Components	CT	HA	S/V/Q	ATTD	EE

Syllabus - Semester Fifth

INTELLECTUAL PROPERTY RIGHTS AND QUALITY ASSURANCE

Course Code: CHY2552

Credit Units: 03

Course Objective:

This course will focus on intellectual property rights and patenting & Indian patent law for pharmaceutical industry.

Course Content:

Module I:

Requirements of GMP, cGMP, GLP, USFDA, WHO Guidelines and ISO 9000 Series, Drugs and Cosmetics Acts and rules, Drug Regulatory Affairs, Documentation- Protocols, Forms and Maintenance of records in Pharmaceutical industry, Preparation of documents for New Drug Approval and Export Registration, Processing and its application, Intellectual Property Rights (Patent, Copyright and Trademarks), Standard Operating Procedure (SOP) for different dosage forms.

Module II:

Concepts in Validation, Validation of manufacturing, Analytical and Process Validation and its Application, Basic concepts of Quality Control and Quality Assurance Systems, Source and Control of Quality Variation of Raw Materials: Containers, Closures, Personnel, Environmental, Etc., In-process quality tests, IPQC problems in Pharmaceutical industries. ICH Guidelines, Sampling Plans, Sampling and Characteristic Curves, Master Formula generation and Maintenance.

Module III:

Patenting, Indian patent law and pharmaceutical industry

Introduction of (IPR) Intellectual Property Rights, Patents, Design, Trademarks, Copyrights, Geographical Indications etc

Patent System: Definition of Patent, Criteria for obtaining patent (Novel, Non-obvious Applications)

Filing and Processing of Patents: General procedure for securing patents in India. Case studies Opposition to Grant of Patent, Patent infringement: Silent features of Indian Patents Act 1970 with latest amendments with special reference to- Product & Process Patents, Provision of compulsory license, Exclusive Marketing Right, The Term of Patent, Patent offices in India; International convention relating to Intellectual Property - Establishment of WIPO - Mission and Activities -History - General Agreement on Trade and Tariff (GATT).

Case Studies on - Patents (Basmati rice, turmeric, neem, etc.) - Copyright and related rights - Trade Marks.

Examination Scheme:

PHARMACEUTICAL & COSMETICS SCIENCES LAB

Course Code: CHY2652

Credit Units: 03

List of Experiments (Any 15 Experiments are to be performed)

Polymers

- Caprolactum from cyclohexanone
- Synthesis of Nylon-6,10
- Preparation of Polystyrene.
- Study the morphology of polymers through optical microscopy.
- Preparation of Epoxy resin using Bisphenol-A and Epichlorohydrin.
- Determination of molecular weight of high polymer using viscosity method.
- Determination of melt flow index of polymers and Compare their Melt Flow Characteristics

Dyes

- Preparation of Methyl Orange- An azodye.
- Preparation of Indigo

Food Industry

- Separation of artificial colorants in confectionary using TLC.
- Determination of protein content of wheat flour.

Cosmetic Products

- Shampoo
- Detergent
- Talc
- Lipstick
- Perfumes

Drugs Analysis

- Preparation of Paracetamol and Aspirin
- Analysis of Drugs:
 - Novalgin
 - Sulfa-drugs
 - Paracetamol

POLYMER TECHNOLOGY

OBJECTIVES OF PROGRAM

The term polymer refers to two different classes of materials – Plastic and Rubber. Polymer engineering uses the theory and knowledge of chemistry in order to handle production and use of polymers. The primary aim of this program is to train students to fulfill the constantly growing requirements of the polymer- based industry. The course provides an in-depth understanding of traditional commodities, such as plastics and specialty polymers, which have wide applications in the biomedical research and pharmaceutical fields. In India, the demand for polymer engineers has increased. After successful completion of the course, one can take up a career in sectors such as automotive, aerospace, packaging, power transmission, and other related manufacturing sectors. Industries based on manufacturing, processing and design of generic polymer (plastics, rubber, composites) also employ such students.

POLYMER TECHNOLOGY

Syllabus - Semester First

POLYMERIZATION

Course Code: PTE2151

Credit Units: 03

Course Objective:

This course provide principles, mechanism and techniques of polymerization. They will also learn about kinetic of polymerization and copolymerization.

Course Contents:

Module-I: General Characteristics of Chain Growth Polymerization, Alkene Polymerization by Free radical, anionic and cationic initiators. Kinetics of Vinyl radical polymerization

Module-II: General Characteristics of Step Growth Polymerization. Chemistry of Step Growth. Polymerization, Kinetics and Statistics of Linear Stepwise Polymerization, Absolute reaction rates.

Module-III: Chemistry of Non-radical chain Polymerization, Anionic and Cationic Polymerization Co-ordination Polymerization, Ring Opening Polymerization

Module-IV: Copolymers, Types of copolymers, copolymerization, Kinetics of Copolymerization, Block and Graft Copolymerization, Cyclopolymerization.

Module-V: Polymerizations in homogenous & heterogenous systems, Diene and divinyl Polymerization Bulk, suspension, solution and emulsion polymerization

Examination Scheme:

WASTE PLASTIC RECYCLING

Course Code: PTE2251

Credit Units: 03

Course Objective:

This course is beneficial to deal with different types of plastics waste, identification of plastics, segregation of plastic wastes, different types of recycling techniques, recycling of commingled plastic waste as well as various rules and regulation regarding plastic manufacturing, disposal and recycling.

Course Contents:

Module I: Introduction, Thermoplastics & thermo sets, Terminology used in recycling, coding & labeling of plastic products for sorting and identification.

Module-II: Organizations involved in plastic recycling. Types of recycling- Primary recycling, secondary recycling, tertiary recycling and quaternary recycling, recycling of mixed waste, recycling of nonwoven sacks

Module-III: Residential recycling: collection containers, education and production, recovery of resins, collection vehicles, role of material recovery facilities (MRF), role of MRF.

Module-IV: Plastic separation, working MRF, case studies, collection and separation systems.

Module-V: Recycling of PET, polyethylene, polystyrene, Polyvinyl chloride, Engineering Thermoplastics, Acrylics, Thermo sets.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

Syllabus - Semester Third

POLYMER TECHNOLOGY

Course Code: PTE2351

Credit Units: 03

Course Objective:

In this course students will learn about preparation, properties and applications of different types of plastics, especially thermoplastics and thermosetting plastics.

Course Contents:

Module-I: Preparation, properties and applications of Polyolefins- Polyethylene, Polypropylene, Polyisobutylene, Vinyl Polymers: Polystyrene, Polyvinylchloride, Polyvinylacetate, Poly(methylmethacrylate), Polyacrylonitrile, Poly(acrylic acid)

Module-II: Preparation, properties and applications of Diene Polymers- Polybutadiene, Styrene-Butadiene Rubber, Nitrile Rubber, Polyisoprene, Polychloroprene.

Module-III: Preparation, properties and applications of Polyesters -Poly(ethylene terephthalate), Polycarbonates, Polyester resins.

Module-IV: Preparation, properties and applications of Polyamides- Nylons, Polyimides, Polyurethanes, Raw Materials, PU elastomers, PU Foams, PU coatings, adhesives and sealants.

Module-V: Preparation, properties and applications of Epoxy Polymers - Types of epoxies, Taffy Process, Hardness, Phenolics - Novolacs & Resoles.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

Readings:

- Polymer Synthesis: Theory & Practice, Braun, Springer International
- An Introduction to Plastics, Elias, Wiley Interscience
- Principles of Polymerization, G. Odion, Wiley Interscience
- Synthetic Polymers, Feldman & Barbalate, Chapman & Hall
- Synthesis of Polymers, D. Schluter, Wiley VCH

Syllabus - Semester Fourth

RUBBER & TYRE TECHNOLOGY

Course Code: PTE2451

Credit Units: 03

Course Objective:

At the end of the course students should be able to understand different types of rubbers, different additives used in rubber industries, compounding of rubber, manufacturing of tyres and design of tyres

Course Contents:

Module-I: Rubber Technology: Introduction, natural and synthetic rubbers, filler systems, stabilizer systems, vulcanization system, compounding ingredients, environmental requirements in 4 compounding.

Module-II: Manufacture of nitrilerubber, chloroprene rubber, diene rubber, SBR rubbers.

Module-III: Tyre Technology- Introduction, development of tyres, classification and types of tyres, tyre components, pneumatic tyres.

Module-IV: Tyre & tread design, tread pattern, carcass design, bead design, Unit V: Tyre testing techniques, tubeless tyres, coloured tyres.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

Suggested Readings:

- Handbook of Plastics Testing & Failure Analysis, Vishu Shah, Wiley Interscience
- Polymer Testing & Evaluation of Plastics, Mathur & Bhardwaj, Allied Publishers
- Encyclopedia of Polymer Science & Technology, Herman F. Mark, Wiley Interscience
- Fatigue, Testing & Analysis, Lee, Elsevier
- Introduction to Plastics & Composites, E. Miller, Marcel Dekker

Syllabus - Semester Fifth

POLYMERIC NANO COMPOSITES

Course Code: PTE2551

Credit Units: 03

Course Objective:

This module deals with introduction, classification, preparation, properties, characterization and applications of polymer nanocomposites.

Course Contents:

Module-I: PREPARATION OF SYNTHESIS: Polymer Nanocomposites, Nanocomposites Preparation and Synthesis, Polymer Matrices: Thermoplastics, Thermosets, Elastomers, Natural and Biodegradable Polymers

Module-II: RHEOLOGY OF NANOCOMPOSITES : Rheology of Multiphase Systems, Rheology of Polymer / clay nanocomposite, Recent studies on Rheology, Measure Techniques, Steady shear Rheology, Dynamic Rheology, Non Linear Viscoelastic properties, Extensional Rheology, Rheological modeling of Nanocomposites.

Module-III: PROCESSING OF NANOCOMPOSITES : Extrusion, Injection Moulding, Blow Moulding, Foaming, Rotational Moulding

Module-IV: STRUCTURE AND PROPERTIES CHARACTERIZATION: Scattering Techniques, Microscopic Techniques, Spectroscopic Techniques, Spectroscopic Techniques, Chromatography, Solid-state characterization: Mechanical Testing, Thermal Characterization

Module-V: APPLICATION OF POLYMER NANOCOMPOSITES: Different applications of Thermoplastics, Thermosets, Biodegradable Polymers nanocomposites.

Examination Scheme:

	IA				EE	
Components	CT	Assignment	LR	Attendance	Theory	Practical
Weightage (%)	10	5	10	5	40	30

Note: IA –Internal Assessment, EE- External Exam, CT- Class Test, LR – Lab Record.

Suggested Readings:

Syllabus - Semester Sixth

BIO-MEDICAL PLASTICS

Course Code: PTE2651

Credit Units: 03

Course Objective:

In this module student will learn about introduction, properties, processing and applications of different polymeric materials used in biomedical and tissue engineering.

Course Contents:

Module-I:

Synthetic and Natural biomaterials used in Biomedical applications

- i) Polyolefin's, Polyamides, Acrylic Polymers, Fluorocarbons, Polyesters, Engg. Plastics.
- ii) Collagen, Polysaccharides, Proteins etc.

Module-II:

Human applications of Plastics : Cardiovascular iMTPLants, Dental IMTPLants, Role of plastics in Ophthalmology, Hydro gels, Drug Delivery Systems, Sutures, Burn Dressings and Artificial Skin. Hernia Mesh, adhesives and Sealants, Artificial organs and devices, Blood bags, Condoms etc.

Module-III:

Blood – polymer interactions and blood compatibility, Chemical and biochemical degradation of polymers, Tissue engineering and polymers.

Module-IV:

Testing and evaluation: in-vitro/-vivo; Standards in product development and regulations; Ethical and sociological issues.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

Suggested Readings:

Course: EARTH SURFACE FEATURES & PROCESSES
Semester: I

Credit : 3
Course code : ESC2102

Course objective: The objective of the course is to make the students acquainted with the various processes operating on the earth and how the interactions leads to the evolution of different geomorphological features and landscape. This course gives an idea of natural process in line with human approach of growth and development and how a mutual balance caters the human need in best possible ways.

Module I:

Introduction to earth surface processes; Basic concepts of geomorphology and its historical development; Terrestrial relief and scales in geomorphology; nature and scope;; Normal cycle of Erosion; Overview of landscape evolution models.

Module II:

Weathering and erosional processes; Geological work by Geological Agents; Fluvial, Glacial, Aeolian, Coastal and Karst landforms with special reference to Indian context
Hill Slope Stability and Mass movements; Classification, causes and prevention; Tectonics, climate and drainage network development.

Module III:

Overview of Indian geomorphology; Aeolian, Coastal, River valley etc. and their significance.
Extraterrestrial landforms and their formational processes.

Examination Scheme:

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

Suggested Readings

1. Bloom, A.L. 1998. Geomorphology: A systematic Analysis of Late Cenozoic Landforms (3rd Edition), Pearson Education, Inc.
2. Singh, S. 1998. Geomorphology. Prayag Pustak Bhavan, Allahabad.
3. Kale, V.S. and Gupta, A. 2001. Introduction to Geomorphology. Orient Longman Ltd.
4. Easterbrook, D.J. 1992. Surface processes and landforms. McMillan Publ.
5. Thornbury

Course: CHEMISTRY LABORATORY
Semester: I

Credit : 1
Course code : ESC2107

Course Content:

1. Titrimetric Analysis

- (i) Calibration and use of apparatus
- (ii) Preparation of solutions of different Molarity/Normality of titrants

2. Acid- Base Titrations

- (i) Estimation of carbonate and hydroxide present together in mixture.
- (ii) Estimation of carbonate and bicarbonate present together in a mixture.
- (iii) Estimation of free alkali present in different soaps/detergents

3. Oxidation- Reduction Titrimetry

- (i) Estimation of Fe(II) and oxalic acid using standardized KMnO_4 solution.
- (ii) Estimation of oxalic acid and sodium oxalate in a given mixture.
- (iii) Estimation of Fe (II) with $\text{K}_2\text{Cr}_2\text{O}_7$ using internal (diphenylamine, anthranilic acid) and external indicator.

Course: CRYSTALLOGRAPHY & MINERALOGY
Semester: II

Credit :3
Course code : ESC2201

Course objective: The course will develop an understanding of the science behind the fundamental chemical, geometrical and physical relationship of matter. This course highlights the chemical and optical fundamentals to decipher structural symmetry of minerals and their optical properties.

Module I:

Crystallography: Brief idea of space lattice; Definition and morphology of crystal and crystal notation; Symmetry elements; Parameter, indices and symbols, Laws of Crystallography; Stereographic Projection; Derivation of 32 classes of crystal; Study of following crystal systems: Isometric System, Tetragonal System, Hexagonal System, Orthogonal System, Monoclinic System, Triclinic System.

Module II:

Mineralogy: Definition and physical properties of Minerals; ions, bonds and their types, coordination number, Isomorphism, Polymorphism and Pseudomorphism; Structure of silicates; A detailed study of important rock forming mineral groups with reference to their composition, structure, physical and optical properties.

Module III:

Optical Mineralogy: Elementary concepts of light; Propagation of light through minerals, Principles of optical mineralogy; Introduction to Nicol Prism, Petrological Microscope and its functions; Crystal habits and twinning, laws of twinning, polarization, double refraction; Isotropism and Anisotropism; Important optical properties: Relief, Pleochroism, Pleochroic, Haloes, Extinction and Extinction angle, Birefringence, Interference colours; Behaviour of convergent polarized light in Uniaxial and Biaxial Minerals.

Examination Scheme:

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

Course: STRUCTURAL GEOLOGY
Semester: II

Credit : 3
Course code : ESC2210

Course objective: This course deals with the study of the three dimensional distribution of rock Modules with respect to their deformational history. The study will make the students understand the structural evolution of a particular region and the important events which occurred in the regional geological past.

Module I:

Definition and objectives; Effects of topography on structural features; Topographic and structural maps; Scale of the map; Survey methods; Contouring and Plotting, Measurement of slope heights, aspects and gradients; Global Position System. Exercise of localization of points, estimation of slope and real distance in the map, Isolines, elevation points; Landform identification and construction of elevation profiles from maps

Module II:

Stresses in rocks, factors controlling rock deformations; Stratification and bedding; Attitude of beds; Outcrops and outcrop patterns, Outliers and inliers; Dip & strike: Significance of top-bottom criteria in structural geology;

Module III:

Definition, Classification, Causes, Recognition, Economic importance and Geologic significance of Folds and Faults; Unconformities, Joints; Lineation, Foliation, Rock cleavage: Definition and types.

Examination Scheme:

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

Suggested Readings

1. Davis, GR. 1984. Structural Geology of Rocks and Region. John Wiley
2. Weijermars, R. 1997. Structural Geology and Map Interpretation, Alboran Science Publishing.
3. Billings, M.P. 1987. Structural Geology, 4th edition, Prentice-Hall.
4. Hatcher, Jr., R.D. 1995. Structural Geology - Principles, Concepts and Problems, Merrill Publishing Company.
5. Ghosh, SK. 1993. Structural geology: fundamentals and modern developments, Pergamon Press, London

Course: EARTH SCIENCES LABORATORY I
Semester: II

Credit : 2
Course code :ESC2208

Course Content:

Crystallography:

1. Study of elements of symmetry of normal classes of six crystal systems.
2. Study of Clinographic Projection
3. Stereographic projection of face poles of crystals.

Mineralogy:

4. Study of physical properties of various common and important minerals in hand specimen –i.e. Silicates, Sulfides, Oxides, Hydroxides, Halides, Carbonates, Phosphates etc.

Optical Mineralogy:

5. Optical identification of common rock forming minerals - Quartz, Plagioclase, Microcline, Muscovite, Biotite, Fluorite, Olivine, Garnet. Tourmaline, Staurolite, Kyanite, Sillimanite, Hypersthene, Augite, Diopside, Hornblende, Tremolite-Actinolite. Corundum, Beryl, Calcite, Barite.

Structural Geology

6. Drawing profile sections and interpretation of geological maps of different complexities.
7. Exercises of stereographic projections of mesoscopic structural data (planar, linear, folded etc.).

Examination Scheme:

Course: IGNEOUS PETROLOGY
Semester: III

Credit : 3
Course code : ESC2301

Course objective: A basic course in earth sciences which deals with the origin, composition, distribution and structure of the rocks that have an origin from magma. The study of igneous rocks is important because they make up the bulk of the earth's crust in the geological time period.

Module I

Introduction to petrology; its significance, distinguishing features of three types of rocks; concept of intrusion and extrusion; Magma: Definition, generation and crystallization and diversification of magma, Tectonic setting and igneous activities; Bowen's reaction principle and its petrological significance.

Module II

Structure, textures and classification of igneous rocks; Concept of mode and norm; Phase rule and phase diagrams – binary and ternary systems.

Module III

Petrogenesis of granite, alkaline rocks; Basalt, Anorthosite and Ultramafic rocks; Petrographic description of the following rock types: Granite, Rhyolite, Syenite, Nepheline-syenite, Monzonite, Granodiorite, Diorite, Pegmatite, Anorthosite, Gabbro, Dolerite, Basalt, Peridotite, Pyroxenite, Norite, Dunite, Trachyte and Andesite.

Examination Scheme:

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

Suggested Readings:

1. John D. Winter 2001. An Introduction to Igneous and Metamorphic Petrology. Prentice Hall Inc
2. Loren A. Raymond 2002. Petrology: The study of Igneous, Sedimentary and Metamorphic rocks. McGraw Hill .New York
3. Bose M.K. 1997. Igneous Petrology. World Press
4. Cox, K.G. Bel, J.D. and Pankthrust, R.J. 2002. The interpretation of Igneous rocks. Allen and Unwin, London
5. Pankthrust, 2000. Igneous and Metamorphic rocks. Prentice Hall.
6. Phillpots, A.R., and Ague, S.J., 2009. Principles of igneous and metamorphic petrology (2ndEdn.) Cambridge.

Course: SEDIMENTOLOGY
Semester: III

Credit : 2
Course code : ESC2302

Course objective: This course is a branch of petrology, dealing with the study of modern sediments and the processes resulting in their deposition. Sedimentary rocks are particularly significant because of the vast extent on the earth's surface and their close linkages to the geological past.

Module I

Basic concepts of Sedimentary Petrology and Sedimentology; Description and classification of Sedimentary rocks, Sedimentary Environments and facies, Weathering and sedimentary flux; Fluid flow and its types, Sediment transport and deposition; Submarine weathering, soils and paleosols; Application of Sedimentary Petrology.

Module II

Textures of clastic and non-clastic sedimentary rocks; Structures of sedimentary rocks; Lithification and Diagenesis; Provenance; Texture, composition, classification, origin and occurrence of Siliciclastic rocks: Conglomerates, Sandstones, Mudrocks; Introduction to coal and petroleum.

Module III

Non-siliciclastic rocks: Carbonate rocks, controls of carbonate deposition, limestone, dolomite and Dolomitisation; Chert and siliceous sediments; Phosphorites, carbonaceous sediments, iron rich sediments and evaporates; Petrographic description of the major rock types: Conglomerate, Breccia, Sandstones, Arkose, Greywacke, Limestone, Dolomite, Shale.

Examination Scheme:

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

Suggested Readings:

1. Prothoreo and Schwab, 2004, Sedimentary Geology, Freeman and Co. New York, 557p
2. Sam Boggs, 1995, Principles of Sedimentology and Stratigraphy, Printice Hall, New Jersey, 765p .
3. Maurice E. Tucker, 2006, Sedimentary Petrology, Blackwell Publishing, 262p.

Course: METAMORPHIC PETROLOGY
Semester: III

Credit : 2
Course code : ESC2303

Course objective: This course would highlight the relationship of rocks with the field relations and local tectonic environment, especially how the impact of heat and pressure causes profound physical and chemical change in a rock to change their form.

Module I

Introduction to Metamorphic Petrology; Factors controlling metamorphism; Types of metamorphism: contact, regional, fault zone metamorphism, impact metamorphism; Limitations of metamorphism; Diagenesis, Anataxis, Palingenesis

Module II

Concept of Zones, Facies, Grades and Isograds; Metamorphic differentiation, prograde, retrograde, and poly-metamorphism; Metamorphic fluids and Metasomatism; Paired metamorphic belts, Index minerals; Thermal and Regional metamorphism of argillaceous, calcareous and basic igneous rocks.

Module III

Origin of Migmatites; Petrographic notes on the following metamorphic rocks: Slate, Phyllite, Schists, Gneisses, Amphibolites, Marble, Quartzites, Hornfels, Charnockite, Khondalite, Eclogite, Kodurite and Skarns.

Examination Scheme:

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

Suggested Readings:

1. Yardley, B W D. 1990. An introduction to metamorphic petrology. ELBS publication.

Course: ATMOSPHERIC SCIENCE
Semester: III

Credit : 2
Course code : ESC2304

Course objective: The purpose of the course is to give a holistic understanding of the various processes and effects of the atmosphere on the other systems and vice versa. This will make the students aware with the fundamental concepts of the climate system and the changes taking place therein.

Module I

Atmosphere: Structure and composition, vertical profile of temperature and pressure, microphysical processes in the atmosphere; Atmospheric physics: Earth's heat budget and radiative forcing; Fundamental forces: Pressure gradient force, centrifugal force, gravity force, Coriolis force; Buys Ballot law; Aurora Borealis and Aurora Australis.

Module II

Introduction to components of climate science; Feedback mechanisms; Atmospheric thermodynamics, greenhouse gases and climate forcing; Heat transfer in ocean.

Module III

Paleoclimatology: Introduction and Measurement techniques; Aerosol in atmosphere, properties; carbonaceous aerosols; radioactive effects of Atmospheric aerosols; Direct and Indirect effects of aerosol particles. Indian monsoon and its variability, western disturbances, Indian Ocean Dipole; El Niño-Southern Oscillation.

Examination Scheme:

Course: MARINE SCIENCE
Semester: II

Credit : 2
Course code : ESC2309

Course objective: The aim of this course is to make the students aware of the various factors that play an important role in determining the physical and chemical characteristics of the marine water and the associated marine biota.

Module I

Introduction to Hydrological cycle; Origin and chemical composition of sea water; geomorphology and Relief of ocean floor; Vertical and horizontal distribution of temperature and salinity

Module II

Concepts of Eustasy; Ekman rule; Land-Air-Sea interactions; Oceanic current system and effect of Coriolis forces; waves and tides; Ocean currents, Global distribution of major ocean currents; Climate change and ocean; Sea level changes and its impact on coastal areas

Module III

Coastal erosion and stabilization; Delta and estuaries; Coastal zone regulation and management; Concept of Ocean Ecosystem.

Examination Scheme:

Course: EARTH SCIENCES LABORATORY II
Semester: III

Credit : 2
Course code :ESC2307

Course Content:

Igneous Petrology:

1. Megascopic and microscopic (textural and mineralogical) study of major Extrusive and Intrusive igneous rocks.

Metamorphic Petrology:

1. Megascopic and microscopic study (textural and mineralogical) of low and medium to high grade metamorphic rocks:

Sedimentology:

1. Exercises on sedimentary structures and their palaeo-environmental significance,
2. Petrography of clastic and non-clastic rocks through hand specimens and thin sections.

Course: ECONOMIC GEOLOGY
Semester: IV

Credit : 2
Course code : ESC2405

Course objective: This course will emphasize on the earth materials primarily used for economic and/or industrial purposes. This branch of earth sciences is extremely significant as it used in geochemistry, mineralogy, geophysics, petrology, structural geology etc. Economic geology is of utmost concern for environmentalists, engineers and conservationists

Module I

Definition and types of ore and minerals and their origin; Bateman's classification; Principles and processes of ore genesis; Endogenous processes: magmatic concentration, contact metasomatic, hydrothermal, skarns, greisens and pegmatites deposits; Exogenous processes: sedimentary ore deposits, Chemical and bacterial precipitation, Colloidal deposition.

Module II

Weathering products and Residual Deposits: Oxidation and Supergene Enrichment; Evaporite deposits, Metamorphism as ore forming processes; Metallic ores: origin, geological occurrences, geographical distribution and uses of the mineral deposits of –Fe, Cr, W, Sn, Zn Pb, Au, Al, Mg and Co and atomic minerals; Nonmetallic and industrial rocks and minerals, their nature and distribution in space and time in India: refractory, chemical, fertilizer, cement and gemstone industry including building stones.

Module III

Economic importance of the following geological formations of India: Precambrians of Dharwars and Singhbhum, Cuddapah, Vindhyan, Gondwana, Jurassic of Kutch, Cretaceous of South India, Siwaliks and Tertiary of Assam.

Examination Scheme:

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

Suggested Reading:

1. Jensen and Bateman: Economic Mineral Deposits.
2. Sen and Guha: A Handbook of Economic Geology.
3. Banerjee: Mineral Resources of India.
4. Sharma and Ram: Introduction to India's Economic Minerals.
5. Deb: Industrial Minerals and Rocks of India.

Course: REMOTE SENSING AND GIS
Semester: IV

Credit : 3
Course code :ESC2410

Course objective: This course will develop the skills of students in the field of GIS and remote sensing. It will also give the basic concepts of remote sensing and principles associated with image acquisition and image processing. The role of GIS as a tool in environmental management and knowledge of GPS will be facilitated. This course will also look into the application of remote sensing/GIS in database generation and environmental management.

Module I

Remote sensing: Introduction, scope and components; Electromagnetic spectrum, its characteristics and interaction with environment; Platforms & Sensors, Albedo, Atmospheric Windows; Aerial photography, Elements of Visual Image Interpretation, Spectral Signature, Digital image processing; Optical remote sensing, microwave remote sensing; Photogrammetry: Introduction, stereoscopic vision; Concept of Digital Elevation Model.

Module II

Map: definition, types, scale and projection; coordinate systems, survey of India (SOI) topographical maps; Geographic Information System: Introduction, definition and terminologies; Components and fundamental operations of GIS; Data structure, raster and vector data structures; Data input methods; Accuracy, precision and resolution, Global positioning systems (GPS):Basics, satellite generation, positioning services, GPS details and integration, GIS and image processing software.

Module III

Techniques and applications of remote sensing in water resource management, Land Use land cover mapping, forest cover/ type mapping, habitat analysis, biodiversity characterization; Use of GIS and remote sensing in environmental monitoring and early warning system.

Examination Scheme:

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

Suggested Readings:

1. Lillisand, Thomas, Ralph W. Kiefer and Jonathan Chipman. 2007. Remote Sensing and Image Interpretation. Wiley India.
2. Jensen, John R. 2004. Introductory Digital Image Processing: A Remote Sensing Perspective. Prentice Hall.
3. Burrough, P.A. and McDonnell, R.A. (1998) Principles of geographical information systems. Oxford University Press, Oxford, 327 pp.
4. Jensen J.R. (2000) Remote Sensing of the Environment: An Earth Resource Perspective, Prentice Hall, ISBN 0-13-489733-1.

Course: GEOPHYSICS
Semester: IV

Credit : 2
Course code :ESC2412

Course objective: The course is developed to give an insight about the physics of earth and the study of earth using quantitative physical methods.

Module I

Interrelationship between geology and geophysics; General and Exploration geophysics; Basic principles of geophysical exploration; Different types of geophysical methods. Role of geological and geophysical data in explaining geodynamical features of the earth.:

Module II

Geophysical Methods: Gravity, magnetic, Electrical, Seismic- their principles and applications; Concepts and Usage of corrections in geophysical data; Geophysical field operations - Different types of surveys, grid and route surveys, profiling and sounding techniques, scales of survey, presentation of geophysical data.

Module III

Application of Geophysical methods - Regional geophysics, oil and gas geophysics, ore geophysics, groundwater geophysics, engineering geophysics; Geophysical anomalies: correction to measured quantities, geophysical, anomaly, regional and residual (local) anomalies, factors controlling anomaly, depth of exploration; Integrated geophysical methods - Ambiguities in geophysical interpretation; Planning and execution of geophysical surveys.

Examination Scheme:

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

Suggested Readings:

1. The Solid Earth: An Introduction to Global Geophysics (2nd ed. 2005) by CMR Fowler, Cambridge University Press.
2. Applied Geophysics by Telford W.M., Geldart L.P. and Sheriff R.E., Cambridge University Press.
3. Milton B. Dobrin (1988): Introduction to Geophysical Prospecting 3rd Ed. McGraw Hill, 630p. ISBN: 0070171955.
4. William Lowrie (1997): Fundamentals of Geophysics. Cambridge University Press, 354p. ISBN-0 521 63454 7.
5. Edwin S. Robinson (1988): Basic Exploration Geophysics. John Wiley & Sons, 562p. ISBN-0-471-87941-x.

Course: PALAEOLOGY
Semester: V

Credit : 2
Course code : ESC2413

Course objective: The students would develop an understanding of the origin and evolution of the past life which is a vital in giving information about Earth's organic and inorganic past.

Module I

Introduction to Fossils and Index Fossils, Fossilization Processes (Taphonomy) and Modes of Preservation; Concept of Species, Species problem in palaeontology, Fossil nomenclature and methods of description, code of systematic nomenclature; Theory of organic evolution and the fossil record; Palaeoecology: Principles and methods; Palaeobiogeography and palaeoclimate.

Module II

Invertebrate Palaeontology: Morphology, classification and geological history of the following groups: Gastropoda, Lamellibranchia, Brachiopoda, Cephalopoda, Trilobita and Echinoidea; Classification of trace fossils and their utility in palaeo-environmental reconstructions; Vertebrate Palaeontology: Origin of vertebrates; Vertebrate fossil record from Gondwana formations, Deccan volcanic province, Palaeogene and Neogene sequences of India and their evolutionary and palaeobiogeographic significance.

Module III

Palaeobotany: Early plant life; Colonization of land; Carboniferous coal forests; Gondwana flora and role of climate in its evolution; Micropaleontology: Microfossils and their importance.

Examination Scheme:

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

Suggested Readings:

1. Clarkson, E.N.K. 1998. Invertebrate Palaeontology and Evolution, George Allen & Unwin.
2. Raup, D.M. and Stanley, S. M. 1971. Principles of Palaeontology, W.H. Freeman and Company.
3. Benton, M. 1997. Basic Palaeontology: An introductory text, D. Harker, Addison Wesley Longman.
4. Prothero, D.R. 1998. Bringing fossils to life – An introduction to Palaeobiology, McGraw Hill.
5. Willis, K.J. & McElwain, J.C. 2002. The evolution of plants, Oxford University Press.
6. Brenchley, P. J., and Harper, D. A. T. 1998. Palaeoecology: Ecosystems, Environments and Evolution. By Chapman and Hall.

Course: EARTH SCIENCE LABORATORY III
Semester: IV

Credit : 2
Course code :ESC2408

Course Content:

1. Study of Topographic Sheets, map sheets, thematic maps,
2. Study of aerial photographs delineating geomorphic features, rock types and structural features
3. Processing of satellite data and delineation of rock types and mapping of soil, vegetation, water and geologic structure.
4. Element of Image Interpretation, Image enhancement, Image registration and Geo-referencing.
5. Image classifications for land use/ land cover using ERDAS, PCI Geomatica and ENVI.
6. GIS Software, introduction to open source GIS
7. Preparation and interpretation of water table contour maps and depth to water level contour maps.
8. Study, preparation and analysis of hydrographs for differing groundwater conditions.
9. Water potential zones of India (map study) including saline water zones.

Examination Scheme:

Course: EXPLORATION GEOLOGY
Semester: V

Credit : 2
Course code :ESC2503

Course objective: Basic knowledge of the occurrence of the resources along with the techniques and statistical analysis associated with for mineral exploration.

Module I:

Resource reserve definitions and classification; Mineral resources in industries: Historical and present perspective; A brief overview of classification of mineral deposits with respect to processes of formation in relation to exploration strategies.

Module II:

Principles of mineral exploration; Prospecting and exploration- conceptualization; Methodology and stages; Sampling, subsurface sampling including pitting, trenching and drilling, core and non-core drilling, planning of bore holes and location of boreholes on ground; Core-logging; Geochemical exploration: Principles; Nature of samples; Anomaly, strength of anomaly and controlling factors; primary and secondary dispersion; Coefficient of aqueous migration. Geobotanical survey: Indicators and survey techniques.

Module III:

Introduction to geophysical methods of exploration: Principles of reserve estimation, density and bulk density, factors affecting reliability of reserve estimation, reserve estimation based on geometrical models (square, rectangular, triangular and polygon blocks); Regular and irregular grid patterns; Stage of mineral exploration; Statistics and error estimation.

Suggested Readings:

1. McKinsty, H.E. 1962. Mining Geology (2nd Ed.) Asia Publishing House.
2. Clark, G.B. 1967. Elements of Mining. 3rd Ed. John Wiley & Sons.
3. Arogyaswami, R.P.N. 1996 Courses in Mining Geology. 4th Ed. Oxford-IBH.

Course: HYDROGEOLOGY
Semester: IV

Credit : 2
Course code :ESC2511

Course objective: The course is designed to make the students aware about the peculiarities of the availability and movement of sub-surface and surface water. The various geological characteristics of ground water and surface water will be dealt with.

Module I:

Scope and significance of hydrogeology Hydrological cycle (Precipitation, Evapo-transpiration, Runoff, and infiltration); Sub-surface movement of water, flow in saturated and unsaturated zones; Vertical distribution of sub-surface water; Origin and age of groundwater.

Module II:

Sub surface hydrogeology: Types, characteristics, classification of aquifers, Porous and Fractured aquifers; Groundwater occurrence in igneous, metamorphic and sedimentary rocks; Darcy's law and its application; Theory and dynamics of groundwater flow, Phreatic and Piezometric level, Analysis of Piezometric surface, Groundwater level fluctuations; Aquifer's hydraulic parameters; Groundwater provinces of India.

Module III:

Elementary well hydraulics, surface and sub-surface exploration of groundwater, drilling and construction of wells, pumping tests and analysis of test data for evaluation of aquifer parameters; Physical and chemical properties of water and water quality; Water balance studies: basic concept, development and management of groundwater resources; Surface and subsurface water interaction; Sea water intrusion in coastal aquifers.

Examination Scheme:

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

Suggested Readings

1. Todd, D.K. 2006. Groundwater hydrology, 2nd Ed., John Wiley & Sons, N.Y.
2. Davis, S.N. and De Weist, R.J.M. 1966. Hydrogeology, John Wiley & Sons Inc., N.Y.
3. Karanth K.R., 1987, Groundwater: Assessment, Development and management, Tata McGraw-Hill Pub. Co. Ltd.

Course: ENGINEERING GEOLOGY
Semester: V

Credit : 2
Course code :ESC2510

Course objective: The course deals with the study of geological structures and their role in engineering structures and projects. Students are expected to develop an insight about the role of a geologist in such engineering projects.

Module I

Introduction to the concept of geology vis-à-vis engineering; Role of geology in planning, design and construction of major man-made structural features; Elementary concepts of rock and soil mechanics.

Module II

Site selection and investigation; Types of structures, classification and their effect on civil engineering projects and Geological mapping; Geological and geotechnical investigations for dams, reservoirs and spillways, tunnels, underground caverns, bridges, highways, shorelines.

Module III

Environmental considerations related to civil engineering projects; Construction materials; Geological hazards (landslides and earthquakes), their significance, causes and preventive/remedial measures; Recent trends in engineering geology.

Examination Scheme:

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

Suggested Readings:

1. Krynin, D.P. and Judd W.R. 1957. Principles of Engineering Geology and Geotechnique, McGrawHill (CBS Publ).
2. Johnson, R.B. and DeGraf, J.V. 1988. Principles of Engineering Geology, John Wiley & Sons, N.Y.
3. Goodman, R.E., 1993. Engineering Geology: Rock in Engineering constructions. Jonh Wiley & Sons, N.Y.

Course: COAL AND PETROLEUM GEOLOGY
Semester: VI

Credit : 3
Course code :ESC2603

Course objective: This course will deal with the geological aspects related to coal and petroleum. This is of utmost significance keeping in view the high employability opportunities associated with this branch of earth science.

Module I:

Coal; Origin, types, ranks and uses; Coalification process; Coal Petrology: Lithotypes, Microlithotypes and macerals: Physical, chemical and optical properties; Maceral analysis: Mineral and organic matter in coal;; Coal exploration and estimation of coal reserves; Applications of coal geology in hydrocarbon exploration; coal petrography of different coalfields of India.

Coalbed methane: Elementary idea about generation of methane in coal bed sand exploration

Module II:

Natural occurrence, Chemical composition and physical properties of crudes in nature; Origin of petroleum, maturation of kerogen; Biogenic and thermal effect; Reservoir rocks: General attributes and petrophysical properties; Migration of oil and gas: Geologic framework and factors controlling hydrocarbon migration; migration routes and barriers.

Module III:

Hydrocarbon traps: Definition, theory and classification of hydrocarbon traps - structural, stratigraphic and combination; Time of trap formation and hydrocarbon accumulation; Cap rocks: Definition and general properties; Formation water characteristics as oil exploration leads; Plate tectonics and global distribution of hydrocarbon reserves; Classification of Indian basins and petroleum geology of oilfields of India: Assam, Bengal, Cauvery, Krishna-Godavari, Cambay and Bombay offshore basins.

Examination Scheme:

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

Suggested Readings:

1. Coal Geology: Larry Thomas, 2002, Wiley and Sons.
2. Coal: it's composition, analysis, utilisation and valuation.: E.E.Somermier 2008, McGrawHill
3. Petroleum Geology: F.K.North, 1986, Allen and Unwin
4. Petroleum Formation and Occurrence: B.P.Tissot and D.H.Welte 1978, Publisher: Springer-Verlag
5. Elements of petroleum Geology: R.C.Shelley 1998, Academic press.

WORKSHOP/ CONFERENCE/ TRAINING PROGRAMME

Course: Workshop/Conference/Training
Semester: VI

Credit : 01
Course Code :ESC2633

Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two ways. The trainer has to make sure that the aspects covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

1. Relevant study material and references will be provided by the trainer in advance.
2. The participants are expected to explore the topic in advance and take active part in the discussions held
3. Attending and participating in all activities of the workshop
4. Group Activities have to be undertaken by students as guided by the trainer.
5. Evaluation of workshop activities would be done through test and quiz at the end of the workshop.
6. Submitting a write up of at least 500 words about the learning outcome from the workshop.

Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

DISSERTATION

Course: Dissertation
Semester: VI

Credit : 09
Course Code : ESC2637

GUIDELINES FOR PROJECT FILE AND PROJECT REPORT

Research experience is a professional problem-solving activity and is equally significant as any other aspect of the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critically analyzed by the faculty guide and corrected by the student at each stage.

PROJECT FILE

The Project File may be a very useful tool for undertaking an assignment along-with a normal semester, an exploratory study, sponsored projects, a project undertaken during summer period or any other period as per curricula where the researcher is working with a company/organization. The project/ assignment may also be a part of the bigger research agenda being pursued by a faculty/ institution/ department.

The Project File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation. This file may be considered in continuous assessment

The Layout Guidelines for the Project File & Project Report:

- A4 size Paper
- Font: Arial (10 points) or Times New Roman (12 points)
- Line spacing: 1.5
- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

Assessment Scheme:

Continuous Evaluation:

40% (Based on punctuality, regularity of work, adherence to plan and methodology, refinements/mid-course corrections etc. as reflected in the Project File.)

Final Evaluation:

60% (Based on the Documentation in the file, Final report layout, analysis and results, achievement of objectives, presentation/ viva)

It is recommended that the Final evaluation should be carried out by a panel of evaluators.

CLIMATE SCIENCE

Syllabus - Semester First

BASICS OF CLIMATE SCIENCE

Course Code: AST2151

Credit Units: 03

Course Objectives:

The aim of this course is to provide the students a basic understanding about the climate system: its attributes, underlying processes, and the drivers of climate change. Knowledge of various components of climatic system, and their interactions with atmosphere/hydrosphere/lithosphere would further create interest amongst the students about the climate system modelling and climatic vulnerability. This course emphasizes the scientific basis for anthropogenic climate change. Students will learn the physics behind the climate system, how climate has changed in the past and reasons why contemporary climate change is different, the scientific basis for anthropogenic climate change theory and how scientists use models to predict future climate. The course will also provide an overview of the physical, ecological, biological, social and economic impacts of climate change. Finally, students will examine various mitigation and adaptation strategies which society can employ in a warmer world.

Course Contents:

Module I: Introduction to Climate Science and its Components

Fundamentals of meteorology; Vertical profiles of temperature, wind, pressure, water vapor, and microphysical processes in the atmosphere; Climate system and interaction among components (atmosphere, oceans, sea, ice and land surface) of climate system and feedback mechanisms; Atmospheric thermodynamics, radiation in the atmosphere, Greenhouse gases and climate forcing; Overview of weather systems: Extreme weather events and Western disturbance.

Module II: Remote Sensing Techniques

Types of remote sensing; Different remote sensing platforms; Principles of Remote Sensing; Radiometer, Lidar, Radar, Sodar, Sonar, Land-atmosphere-ocean satellites; Calibration and validation methods.

Module III: Climatology and Meteorology

Radiation budget and balance; Solar constant; Lapse rate and stability; Water cycle and role in weather; Mechanism of wind development; Fundamental forces (pressure gradient, centrifugal, gravity, Coriolis); Surface winds and upper air circulations; Jet streams; Planetary circulations.

Examination Scheme:

Syllabus - Semester Second

INTRODUCTION TO EARTH SYSTEM SCIENCE

Course Code: AST2251

Credit Units: 03

Course Objectives:

This course embraces chemistry, biology, mathematics and applied sciences in transcending disciplinary boundaries to treat the Earth as an integrated system. Thus, it imparts knowledge to the students with basic understanding of the physico-chemical, biological and human interactions that determine the past, current and future states of the Earth. Earth system science seeks to integrate various fields of academic study to understand the Earth as a system. It considers interaction between the atmosphere, hydrosphere, lithosphere, biosphere and heliosphere.

Further, the Earth System Science program provides students with a fundamental understanding of the oceanographic, atmospheric, and terrestrial sciences. This program of study prepares students for careers in science, research, or technical fields. Students learn to apply basic sciences (physics, chemistry, mathematics, and biology) to understand the major processes and systems governing the Earth's climate, biogeochemical cycles, and global change. Central to the B.S. program is an understanding of relevant scientific literature, methods to collect/analyze data, and interpret results in the context of scientific theory. Students will learn to work collaboratively to understand and address complex problems and communicate scientific knowledge. Through the core course work, students will learn to explain the current and projected future state of the Earth system in the context of past climate change and current human activities.

Course Contents:

Module I: Fundamental Processes in Earth and Environmental Studies

An introduction to the physical environment, biological systems, and human-environmental interactions, Physical principles such as fluid transport and reaction rates using environmental examples as well as principles of populations, ecosystems, carrying capacity, and sustainable use of resources.

Module II: Hurricanes, Tsunamis and other Catastrophes

Introduction to the basic science and state of predictability of various natural catastrophic events such as hurricanes, tsunamis and volcanoes, future climate catastrophes including severe droughts, abrupt climate change, thermohaline circulation collapse and sea level rise.

Module III: Remote Sensing and Geographic Information System (GIS) for Earth System Science

Principles behind remote sensing, and the types of satellite data available for study of the oceans, land, and atmosphere, GIS Brief History, Techniques and Technology, Uncertainties, Spatial Analysis.

Syllabus - Semester Third

CLOUD MICROPHYSICS AND CHEMISTRY

Course Code: AST2351

Credit Units: 03

Course Objectives:

This course focuses on understanding how transformation of aerosol particles to droplets or ice crystals, heterogeneous chemistry and acid rain, physics of aerosol and cloud element motion, the interaction of particles with water vapor, chemical composition of particles and the effect on cloud formation processes, and the effect of cloud processing on aerosol chemistry, geo-engineering, weather modification and volcanic effects. Thus, it provides the students an insight into one of the important complex drivers of the local/regional/continental/hemispheric/global climate system.

Course Contents

Module I: Basic Cloud Physics

Water vapour and its thermodynamic effects, mixing and convection, formation of cloud droplets, formation and growth of ice crystals, aerosol sources and sizes, condensation and growth of cloud droplets: curvature, Kelvin, solute effects, cloud growth and precipitation, rain, snow and hail processes.

Module II: Microphysical Processes in warm and cold clouds

Cloud condensation nuclei, microstructures of warm clouds, growth of cloud droplets in warm clouds, growth by condensation and collision-coalescence, microphysics of cold clouds, growth by collection, modification of warm and cold clouds, lightning and thunder.

Module III: Cloud and Precipitation Chemistry

Transport of particles and gases, nucleation scavenging, dissolution of gases in clouds droplets, precipitation scavenging, chemical composition of rain, production of aerosols by clouds.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

A-Attendance; CT-Class Test; S/V/Q-Seminar/Quiz/Viva; HA-Home Assignment; EE-End Semester Examination

Syllabus - Semester Fourth

CLIMATE CHANGE: IMPACT, VULNERABILITY AND ADAPTATION

Course Code: AST2451

Credit Units: 03

Course Objectives:

This course provides the students with an introduction to the vulnerability of climate change and potential adaptation options of natural as well as social systems. A critical view will be laid on the 'attribution problem', the prioritization of adaptation means, mal-adaptations, the implementation problem, ethical views and conflicts with development goals. Win-win-situations and trade-offs between the latter and climate change adaptation is part of this course too.

Course Contents

Module I: Introduction to the Impacts of Climate Change

Fundamentals of climate system and climate change, brief summary of Inter-Governmental Panel of Climate and Climate Change (IPCC) reports, future directions for mitigation processes.

Module II: Vulnerability

Introduction to the concept, ecological and social systems, coastal vulnerability, methods of evaluation of vulnerability and impacts.

Module III: Adaptation

Introduction to the concept, indicators of adaptation, options and limits of adaptation, food and energy security, autonomous versus planned adaptation, adaptation capacity.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

A-Attendance; CT-Class Test; S/V/Q-Seminar/Quiz/Viva; HA-Home Assignment; EE-End Semester Examination

Syllabus - Semester Fifth

PRIMER OF OCEANOGRAPHY

Course Code: AST2551

Credit Units: 03

Course Objectives:

Ocean-related science is relevant to many contemporary environmental issues and problems and central to understanding earth-system evolution, dynamics, climate and sustainability. This course offers a very flexible curriculum that serves students with a broad range of educational and career interests including environmental management and regulation, environmental law. The topics selected for this course, are expected to provide the students with a broad conception of the world's oceans; evaluation of its potential contributions to solution of problems presently confronting mankind.

Course Contents

Module I: Ocean Properties

Introduction to Oceans, physical and chemical properties of ocean water, composition of sea water, salinity and density.

Module II: Physical Oceanography

Thermal expansion of sea water, viscosity, surface tension, heat conduction, adiabatic temperature changes, optical properties, temperature-salinity relationship,

Module III: Bathymetry, Eco Systems and Pollution

Basic definition, oceanic life and ecosystems, measurement techniques, bathymetric chart, fish-zone detection, marine pollution.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

A-Attendance; CT-Class Test; S/V/Q-Seminar/Quiz/Viva; HA-Home Assignment; EE-End Semester Examination

FUNDAMENTALS OF CLIMATE VARIABILITY AND MODELLING

Course Code: AST2651

Credit Units: 03

Course Objectives:

This course essentially deals with fundamentals of climate variability and its modelling. This knowledge to the students makes them familiar with different types of climate models available not only for prediction purposes but also to undertake sensitivity tests and to simulate the future climate scenarios both regionally and globally.

Course Details

Module I: Climate Variability

Natural variability versus anthropogenic forcing to climate system, climate sensitivity, Greenhouse gases and global warming,

Module II: Climate Drivers

Climate Global distributions of temperature, precipitation, precipitation, climate classification, Natural and external forcings to climate variability,

Module III: Basics of Climate Modelling

Simple energy balance climate models, introduction to coupled ocean-atmosphere models, simple models for predicting climate change and impact assessment.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

Background

The program describes health issues, originated by air/water/soil pollution, scientific understanding of causes and possible approaches to mitigate and control the major environmental health problems in automobile/industry sectors of developing countries. Finally, the course addresses the pathways that connect pollution, human health and climate change at local/regional/global scale. Topics illustrate how the human body reacts with environmental pollutants; physicochemical, dynamical and biological agents of environmental contamination; vectors for dissemination (air, water, soil); solid and hazardous waste; susceptible populations; biomarkers, risk analysis and climate change; the scientific basis for policy decisions; and emerging global environmental health problems. This course also emphasizes the feedback mechanisms and pathways that interplay between air pollution, human health and climate parameters over different environments in a cohort hybrid seamless model, emphasizing integrated approach.

Objectives

Advancing Environmental Health and Climate (EHC) encompasses the study of all levels of biological organization, biochemical pathways, population at all stages across the lifespan, and climate change. EHC uses a rich, diverse, and constantly evolving set of outdoor/indoor observational, experimental, computational, and clinical approaches to explore the impacts of varying levels of exposure and susceptibility to such exposure. The support of novel, cutting-edge research approaches, high risk for high reward, and mitigation methods is an important element of the advancing EHC theme in this program.

ENVIRONMENTAL HEALTH & CLIMATE

Syllabus - Semester First

LINKAGES BETWEEN ENVIRONMENT & HEALTH

Course Code: AST2152

Credit Units: 03

Course Objectives: To teach students the essential concepts on environment-related health problems, such as asthma and neurological damage from lead exposure, affect children disproportionately. A number of efforts are under way around the nation to educate children about the concepts and principles of environmental health with the goal of expanding science education, empowering children to avoid some adverse environmental exposures, and helping them to grow in to informed citizens who can assess and affect important public health issues.

Course Contents

Module-I: Environment and Public Health

The environment at risk: Converging paradigms for environmental health theory and practice; Understanding linkages between Environment and Public Health: Effect of quality of air, water and soil on health. The Bhopal disaster and its aftermath: are views.

Module II: Human Health Exposure Effects

Ecosystems and Human well-being: Synthesis; Human exposure assessment; Introduction to Bio-monitoring and bio-markers; Exposure assessment; Perspective on Individual health: Nutritional, socio-cultural and developmental aspects, Dietary diversity for good health; Human developmental indices for public health.

Module III: Human Health Risks Assessment

Introduction to environmental hazards and their effects on human health and ecosystems; Health effects of chemical exposure. Known's and unknowns on burden of disease due to chemicals: A systematic review; Cancer-Causing Substances in the Environment. Quantifying selected major risks to health: Selected Occupational risks.

CLIMATE CHANGE AND IMPLICATIONS ON PUBLIC HEALTH

Course Code: AST2252

Credit Units: 03

Course Objectives: This course intends to educate students about basic principles behind the climate change and public health. Emphasis will be given to how the changes in weather and climate parameters, especially the episodic events influence human health and vice versa.

Course Contents

Module-I: Human Influence on Climate

Global warming- Agricultural practices (chemical agriculture) and Industrial technologies (use of non-biodegradable materials like plastics, aerosols, refrigerants, pesticides); Manifestations of climate change on Public Health-Burning of fossil fuels, automobile emissions and acid rain.

Module-II: Local/ Regional Climate Feedbacks on Human Health

Changes in the greenhouse gas concentrations and other drivers that alter the global climate and bring about myriad human health consequences. Environmental consequences of climate change, such as extreme heat waves, rising sea-levels, changes in precipitation, resulting in flooding and droughts, intense hurricanes, and degraded air quality, affect directly and indirectly the physical, social, and psychological health of humans.

Module-III: Cohort Studies of Weather/ Climate and Health Relationship

Changes in precipitation: availability and quantity of water, underlying extreme weather events such as intense hurricanes and flooding. Climate change: a driver of disease migration, as well as exacerbate health effects resulting from their lease of toxic air pollutants invulnerable populations such as children, the elderly, and those with asthma or cardiovascular disease, Cohort Studies.

DISEASES IN CONTEMPORARY SOCIETY

Course Code: AST2352

Credit Units: 03

Course Objectives: This course deals with different types of diseases including communicable ones that are primarily caused by particulate and gaseous pollutants. Several pollutants and corresponding health problems will be delineated. Necessary precautions required to be taken for reducing the health problems will be explained.

Course Contents

Module-I: Health-Susceptibility Relationship

Need for good health-factors affecting health; Types of diseases-deficiency, infection, pollution diseases-allergies, epidemiological, cardiovascular, COPD including non-smokers and cancer; Personal hygiene-food - balanced diet; Food habits and cleanliness; food adulterants, avoiding smoking, drugs and alcohol, Physiology.

Module-II: Biomarkers and Different Diseases

Stem cells and Immune cells, DNA/RNA, Biological Processes, Spirometry, Communicable diseases: Mode of transmission epidemic and endemic diseases; Management of hygiene in public places - Railway stations, Bus stands and other public places; Infectious diseases: Role of sanitation and poverty case studies on TB, diarrhea, malaria, viral diseases. Non-communicable diseases: Role of Life style and built environment; Diabetes and Hypertension.

AIR, WATER AND SOIL POLLUTION, ENVIRONMENTAL HEALTH PROFESSIONS

Course Code: AST2452

Credit Units: 03

Course Objectives: This course will provide students with an understanding and appreciation of the complex interactions between microbial air, water and soil quality and human health. The broad objectives of this course cover (i) impact of both primary and secondary (gas-to-particle conversion) particles on morbidity and mortality of human health and pre-mature deaths, (ii) how the quality of water is affected by natural, seasonal, accidental, intentional and man-made activities, (ii) how the contaminated water increases the burden of human diseases with particular emphasis on infectious diseases, (iii) Industrial processes including mining and manufacturing that lead to cause of soil pollution.

Course Contents

Module-I: Interface Between Indoor and Outdoor Pollution

Indoor and outdoor air pollutants; sources and effects of pollutants in the atmospheric environment; Particulate matter and atmospheric visibility; Atmospheric diffusion theories and types of dispersion models; Lapse rates and various types of stability classification; Wind profile; Wind roses; Mixing depth.

Module-II: Air Pollution and Emission Inventory

General characteristics of the stack plumes; Dispersion of pollutants in the atmosphere and solution of advection diffusion equation with Gaussian distribution for point, line and area sources; plume rise; dispersion parameters and various methods of their evaluation; Atmospheric Removal processes and residence time; Effect of buildings and topography on dispersion; Similarity theory and profiles in the surface layer; Air Quality and Emission standards, their measurements and statistics; Air quality and environmental health.

Module-III: Water Pollution and Purification

Understanding of the significance of the environment for human health; Human population pressures and pollution dynamics; Common terms and definitions in water quality; Aquatic resources of the world & Sources of drinking water -Common contaminants of drinking water and linkages to disease; Non-point source pollution.

Module-IV: Soil Pollution-Causes and Mitigation

Soil contamination from abandoned industrial sites; Ants in to the environment, Improper disposal of house hold waste; Garbage and personal waste that leaks from sewer systems; pollution due to aged waste decompose; pollution due to plastic products like water bottles, bags and diapers. Risings use of chemicals in agriculture; toxic soil issues from industries and agricultural activities; contributions from pesticides and fertilizers, Increase in toxicity and reduction in fertility.

GROUND-BASED AND SATELLITE REMOTE SENSING

Course Code: AST2552

Credit Units: 03

Course Objectives: The course will make the students aware about various passive and active remote sensing sensors and techniques used now-a-days for observing the weather and climate system. The lectures will focus on the fundamentals of retrievals of various geophysical parameters and interpretation of remote sensing data.

Course Contents

Module-I: Aerial Mapping

Introduction & history to Aerial Photography; vantage points, vertical & oblique aerial photography; Planning; Elements of visual image interpretation; Geometry of aerial photography, photogrammetry; Relief displacement; Stereos copy; Parallax.

Module-II: Multi-Platform Remote Sensing

Definition, history; Electromagnetic radiation, atmospheric windows, atmospheric bands; Orbits sun-synchronous, geo-synchronous; Resolution spectral, spatial, radiometric, temporal; Multispectral & Hyper spectral remote sensing; Satellite remote sensing missions; Active & Passive remote sensing, RADAR, LIDAR; Applications – soil, water, vegetation, air, urban landscape.

Module-III: Geographical Information System (GIS)

Introduction to GIS, Management of data, GIS as DBMS, Data types – vector & raster, Data manipulation and analysis; Components of GIS; Structure of GIS; Digital Elevation Models; Triangulated Irregular Network; GIS applications; Global Positioning System.

ENVIRONMENTAL MANAGEMENT

Syllabus - Semester First

ENVIRONMENTAL STUDIES-I

Course Code: ENV2151

Credit Units: 02

Course Objective:

The term environment is used to describe, in the aggregate, all the external forces, influences and conditions, which affect the life, nature, behaviour, growth, development, and maturity of living organisms. At present a great number of environmental issues, have grown in size and complexity day by day, threatening the survival of mankind on earth. A study of environmental studies is quite essential for handling environmental disasters and industrial management. The objective of environmental studies is to enlighten the masses about the importance of the protection and conservation of our environment and control of human activities which has an adverse effect on the environment.

Course Contents:

Module I: The multidisciplinary nature of environmental studies

Definition, scope and importance, Need for public awareness

Module II: Natural Resources - Renewable and non-renewable resources

Natural resources and associated problems

Forest resources: Use and over-exploitation, deforestation, case studies, timber extraction, mining, dams and their effects on forests and tribal people.

Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.

Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies.

Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies.

Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources, case studies.

Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification.

- Role of an individual in conservation of natural resources.
- Equitable use of resources for sustainable lifestyles.

Module III: Ecosystems

Concept of an ecosystem: Structure and function of an ecosystem, producers, consumers and decomposers, energy flow in the ecosystem, ecological succession, food chains, food webs and ecological pyramids, introduction, types, characteristic features, structure and function of the following ecosystems:

- a. Forest ecosystem
- b. Grassland ecosystem
- c. Desert ecosystem
- d. Aquatic ecosystems (ponds, streams, lakes, rivers, ocean estuaries)

Syllabus - Semester Second

ENVIRONMENTAL STUDIES-II

Course Code: ENV2251

Credit Units: 02

Course Objective:

The term environment is used to describe, in the aggregate, all the external forces, influences and conditions, which affect the life, nature, behaviour, growth, development, and maturity of living organisms. At present a great number of environmental issues, have grown in size and complexity day by day, threatening the survival of mankind on earth. A study of environmental studies is quite essential for handling environmental disasters and industrial management. The objective of environmental studies is to enlighten the masses about the importance of the protection and conservation of our environment and control of human activities which has an adverse effect on the environment.

Course Contents:

Module I: Environmental Pollution

Definition, causes, effects, and control measures of: air pollution, water pollution, soil pollution, marine pollution, noise pollution, thermal pollution, and nuclear pollution.

Solid waste management: causes, effects and control measures of urban and industrial wastes, role of an individual in prevention of pollution, pollution case studies, disaster management: floods, earthquake, cyclone, and landslides.

Module II: Social Issues and the Environment

From unsustainable to sustainable development, Urban problems related to energy

Water conservation, rain water harvesting, and watershed management

Resettlement and rehabilitation of people, its problems and concerns, case studies

Environmental ethics: issues and possible solutions

Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust, case studies

Wasteland reclamation

Consumerism and waste products

Environmental Protection Act, Air (Prevention and Control of Pollution) Act, Water (Prevention and control of Pollution) Act, Wildlife Protection Act, Forest Conservation Act, Issues involved in enforcement of environmental legislation, Public awareness

Module III: Human Population and the Environment

Population growth, variation among nations

Population explosion – Family Welfare Programmes, Environment and human health

Human Rights, Value education, HIV/ AIDS, Women and child welfare

Role of information technology in environment and human health, Case studies

Module IV: Field Work

Visit to a local area to document environmental assets-river/ forest/ grassland/ hill/ mountain

Visit to a local polluted site – urban / rural / industrial / agricultural

Study of common plants, insects, and birds

Study of simple ecosystems-pond, river, hill slopes, etc (Field work equal to 5 lecture hours)

ENVIRONMENTAL STUDIES

Course Code: ENV2152 / ENV2252

Credit Units: 04

Course Objective:

The term environment is used to describe, in the aggregate, all the external forces, influences and conditions, which affect the life, nature, behaviour, growth, development, and maturity of living organisms. At present a great number of environmental issues, have grown in size and complexity day by day, threatening the survival of mankind on earth. A study of environmental studies is quite essential for handling environmental disasters and industrial management. The objective of environmental studies is to enlighten the masses about the importance of the protection and conservation of our environment and control of human activities which has an adverse effect on the environment.

Course Contents:

Module I: The multidisciplinary nature of environmental studies

Definition, scope and importance, Need for public awareness

Module II: Natural Resources - Renewable and non-renewable resources

Natural resources and associated problems

Forest resources: Use and over-exploitation, deforestation, case studies, timber extraction, mining, dams and their effects on forests and tribal people.

Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.

Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies.

Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies.

Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources, case studies.

Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification.

- Role of an individual in conservation of natural resources.
- Equitable use of resources for sustainable lifestyles.

Module III: Ecosystems

Concept of an ecosystem: Structure and function of an ecosystem, producers, consumers and decomposers, energy flow in the ecosystem, ecological succession, food chains, food webs and ecological pyramids, introduction, types, characteristic features, structure and function of the following ecosystems:

- a. Forest ecosystem
- b. Grassland ecosystem
- c. Desert ecosystem
- d. Aquatic ecosystems (ponds, streams, lakes, rivers, ocean estuaries)

Module IV: Biodiversity and its conservation

Introduction – Definition: genetic, species and ecosystem diversity, biogeographical classification of India, value of biodiversity: consumptive use, productive use, social, ethical aesthetic and option values, biodiversity at global, national and local levels, India as a mega-diversity nation, hot-spots of

Manesar Gurgaon-122413

biodiversity, threats to biodiversity: habitat loss, poaching of wildlife, man wildlife conflicts, endangered and endemic species of India, conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

Module V: Environnemental Pollution

Definition, causes, effects, and control measures of: air pollution, water pollution, soil pollution, marine pollution, noise pollution, thermal pollution, and nuclear pollution.

Solid waste management: causes, effects and control measures of urban and industrial wastes, role of an individual in prevention of pollution, pollution case studies, disaster management: floods, earthquake, cyclone, and landslides.

Module VI: Social Issues and the Environment

From unsustainable to sustainable development, Urban problems related to energy

Water conservation, rain water harvesting, and watershed management

Resettlement and rehabilitation of people, its problems and concerns, case studies

Environmental ethics: issues and possible solutions

Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust, case studies

Wasteland reclamation

Consumerism and waste products

Environmental Protection Act, Air (Prevention and Control of Pollution) Act, Water (Prevention and control of Pollution) Act, Wildlife Protection Act, Forest Conservation Act, Issues involved in enforcement of environmental legislation, Public awareness

Module VII: Human Population and the Environment

Population growth, variation among nations

Population explosion – Family Welfare Programmes, Environment and human health

Human Rights, Value education, HIV/ AIDS, Women and child welfare

Role of information technology in environment and human health, Case studies

Module VIII: Field Work

Visit to a local area to document environmental assets-river/ forest/ grassland/ hill/ mountain

Visit to a local polluted site – urban / rural / industrial / agricultural

Study of common plants, insects, and birds

Study of simple ecosystems-pond, river, hill slopes, etc (Field work equal to 5 lecture hours)

Examination Scheme:

Components	CT	HA	S/V/Q	A	EE
Weightage (%)	15	5	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, A: Attendance, EE: End Semester Examination

Syllabus - Semester Third

ENVIRONMENTAL POLLUTION AND WASTE MANAGEMENT

Course Code: ENV2351

Credit Units: 3

Course Objective:

The growing pressure on natural resources and the progressive increase in the production of waste poses serious challenges for our society. Waste production and management play a central role in environmental policy. The production of industrial and urban waste has exploded during the last ten years. From a modern viewpoint, waste is to be considered a lost resource and, hence, it is a manufacturing cost variable that must be optimized with both direct costs and the cost to society in mind. Since it is not possible to avoid the production of waste, the main objective in order of importance is to try to reduce it to a minimum.

Course Contents:

Module I: Water pollution – sources, types, and effect of water pollutants, water quality standards, algal bloom, eutrophication, biomagnification/ bioaccumulation, water pollution control - primary, secondary and tertiary wastewater treatment; **Soil Pollution** – soil pollutants – types, sources, effects, and control.

Module II: Air pollution – structure and composition of atmosphere, classification, sources and effects of air pollutants, air pollution control - particulate and gaseous emission control methods; acid rain, green house effect, global warming, ozone depletion, smog, climate change, **Noise Pollution** – sources, effects, and control.

Module III: Waste management: Methods of waste collection, storage, and transportation, treatment and disposal techniques for solid waste: landfill operation and maintenance, composting: advantages and limitations, vermin-composting, autoclaving, incineration, biogas plant, techniques for hazardous waste treatment and safe disposal, nuclear and e-waste management, Government agencies and programs: NCEPC, MoEFCC, CPCB and SPCB's.

Examination Scheme:

Components	CT	HA	S/V/Q	A	EE
Weightage (%)	5	10	10	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, A: Attendance EE: End Semester Examination.

Syllabus - Semester Fourth

ENVIRONMENTAL MANAGEMENT AND INDUSTRIAL SAFETY

Course Code: ENV2451

Credit Units: 03

Course Objective:

The course will give an overview of the safety and environmental issues in the industry. It will provide detailed understanding of the methods and techniques to resolve these key issues for making production and processing cleaner and safer. This course would educate students to identify and assess hazards in any stage of operation, to quantify and manage them as well. This course will also highlight lessons learnt from the past accidents. The aims of this course are: to create awareness for quality of life protection, health and environmental safety, occupational hazards.

Course Contents:

Module I: Public health: definition, need for good health, factors affecting health, communicable diseases, mode of transmission (epidemic and endemic diseases), management of hygiene in public places, occupational health hazards and safety (physical, chemical and biological), health protection measures for workers- health education, first aid, management of medical emergencies.

Module II: Industrial safety and management techniques: industrial safety standards and regulations, accidents – definition, prevention and control, risk analysis and assessment, safety cost and expenses.

Module III: Safety management system - environmental management systems (EMS) ISO 14000 and 14001, OSHA and NIOSH, compensation act, public liability insurance act, mining act, good manufacturing practices (GMP) and good laboratory management practices (GLP).

Examination Scheme:

Components	CT	HA	S/V/Q	A	EE
Weightage (%)	5	10	10	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, A: Attendance EE: End Semester Examination

Syllabus - Semester Fifth

ENVIRONMENTAL ECONOMICS AND GLOBALIZATION

Course Code: ENV2551

Credit Units: 03

Course Objective:

Environmental issues such as pollution, climate change and the conservation of biodiversity are currently in the headlines of economic debate. Economic analysis of the environment is challenging precisely because environmental value is not always conveniently revealed in a market, and thus is subject to inappropriate use. The major topics addressed in this field of study are: the causes of environmental degradation, the need to re-establish the disciplinary ties between ecology and economics, the difficulties associated with assigning ownership right to environmental resources, the trade-off between environmental degradation and economic goods and services, assessing the monetary value of environmental damage etc.

Course Content:

Module I: Introduction: definition and scope of environmental economics, economics and environment, environment inter-linkages, market failure and externality, accounting for the environment.

Module II: Resource economics: natural resources: types and classification, economics of natural resources exploitation, market structure and the exploitation of non-renewable resources, methods of valuation of environmental costs and benefits.

Module III: Economics & Environmental Management: WTO and international trade, environmental trade barriers, natural resource accounting, environmental communication, GRI reports, green marketing, eco-labeling, pollution control: basic approach to environmental policy and management, pollution tax: effluent charges and subsidies.

Examination Scheme:

Components	CT	HA	S/V/Q	A	EE
Weightage (%)	5	10	10	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, A: Attendance EE: End Semester Examination

Syllabus - Semester Sixth

SUSTAINABLE DEVELOPMENT PRACTICES

Course Code: ENV2651

Credit Units: 03

Course Objective

Finding approaches to development that balance economic and social progress, address cultural differences, and respect ecological values and limits is the key to sustainable development. Moving towards this goal requires fundamental changes in human attitudes and behavior in our personal lives, in our community activities, and in our places of work. The success in this regard is critically dependent on education and training. This course will imbue students with respect for the conservation and sustainable use of resources, social equity, and appropriate development along with competencies to practice sustainable tasks at the workplace of today and tomorrow.

Course Content:

Module I: Introduction: Environment, sustainable development and globalization, millennium development goals, regional perspectives, challenges and environmental issues in India, sustainable development and Indian development policies, local environmental management and legislation.

Module II: Climate change and sustainable development: Climate change and sustainable development, climate change and forest management, sustainable consumption, strategies and issues, international environmental agreements and climate change, international environmental agreements and climate change.

Module III: Writing on environment: Environmentalism, environmental journalism and activism, media for environment, conventions and science article styles, fact-checking with sources, research and publication, green peace movement, UNEP, UNCED, WBCSD, WWF, WRI, GRI, and World Bank.

Examination Scheme:

Components	D	P	A	EE

(Environmental Studies is mandatory for all undergraduate courses and is taught in three different schemes during first year)*

ENVIRONMENTAL MANAGEMENT

Syllabus - Semester First

ENVIRONMENTAL STUDIES-I

Course Code: ENV2151

Credit Units: 02

Course Objective:

The term environment is used to describe, in the aggregate, all the external forces, influences and conditions, which affect the life, nature, behaviour, growth, development, and maturity of living organisms. At present a great number of environmental issues, have grown in size and complexity day by day, threatening the survival of mankind on earth. A study of environmental studies is quite essential for handling environmental disasters and industrial management. The objective of environmental studies is to enlighten the masses about the importance of the protection and conservation of our environment and control of human activities which has an adverse effect on the environment.

Course Contents:

Module I: The multidisciplinary nature of environmental studies

Definition, scope and importance, Need for public awareness

Module II: Natural Resources - Renewable and non-renewable resources

Natural resources and associated problems

Forest resources: Use and over-exploitation, deforestation, case studies, timber extraction, mining, dams and their effects on forests and tribal people.

Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.

Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies.

Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies.

Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources, case studies.

Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification.

- Role of an individual in conservation of natural resources.
- Equitable use of resources for sustainable lifestyles.

Module III: Ecosystems

Concept of an ecosystem: Structure and function of an ecosystem, producers, consumers and decomposers, energy flow in the ecosystem, ecological succession, food chains, food webs and ecological pyramids, introduction, types, characteristic features, structure and function of the following ecosystems:

- a. Forest ecosystem
- b. Grassland ecosystem
- c. Desert ecosystem
- d. Aquatic ecosystems (ponds, streams, lakes, rivers, ocean estuaries)

Module IV: Biodiversity and its conservation

Introduction – Definition: genetic, species and ecosystem diversity, biogeographical classification of India, value of biodiversity: consumptive use, productive use, social, ethical aesthetic and option values, biodiversity at global, national and local levels, India as a mega-diversity nation, hot-spots of biodiversity, threats to biodiversity: habitat loss, poaching of wildlife, man wildlife conflicts, endangered and endemic species of India, conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

Examination Scheme:

Components	CT	HA	S/V/Q	A	EE
Weightage (%)	15	5	5	5	70

ENVIRONMENTAL STUDIES-II

Course Code: ENV2251

Credit Units: 02

Course Objective:

The term environment is used to describe, in the aggregate, all the external forces, influences and conditions, which affect the life, nature, behaviour, growth, development, and maturity of living organisms. At present a great number of environmental issues, have grown in size and complexity day by day, threatening the survival of mankind on earth. A study of environmental studies is quite essential for handling environmental disasters and industrial management. The objective of environmental studies is to enlighten the masses about the importance of the protection and conservation of our environment and control of human activities which has an adverse effect on the environment.

Course Contents:

Module I: Environmental Pollution

Definition, causes, effects, and control measures of: air pollution, water pollution, soil pollution, marine pollution, noise pollution, thermal pollution, and nuclear pollution.

Solid waste management: causes, effects and control measures of urban and industrial wastes, role of an individual in prevention of pollution, pollution case studies, disaster management: floods, earthquake, cyclone, and landslides.

Module II: Social Issues and the Environment

From unsustainable to sustainable development, Urban problems related to energy

Water conservation, rain water harvesting, and watershed management

Resettlement and rehabilitation of people, its problems and concerns, case studies

Environmental ethics: issues and possible solutions

Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust, case studies

Wasteland reclamation

Consumerism and waste products

Environmental Protection Act, Air (Prevention and Control of Pollution) Act, Water (Prevention and control of Pollution) Act, Wildlife Protection Act, Forest Conservation Act, Issues involved in enforcement of environmental legislation, Public awareness

Module III: Human Population and the Environment

Population growth, variation among nations

Population explosion – Family Welfare Programmes, Environment and human health

Human Rights, Value education, HIV/ AIDS, Women and child welfare

Role of information technology in environment and human health, Case studies

Module IV: Field Work

Visit to a local area to document environmental assets-river/ forest/ grassland/ hill/ mountain

Visit to a local polluted site – urban / rural / industrial / agricultural

Study of common plants, insects, and birds

Study of simple ecosystems-pond, river, hill slopes, etc (Field work equal to 5 lecture hours)

Syllabus - Semester First / Second

ENVIRONMENTAL STUDIES

Course Code: ENV2152 / ENV2252

Credit Units: 04

Course Objective:

The term environment is used to describe, in the aggregate, all the external forces, influences and conditions, which affect the life, nature, behaviour, growth, development, and maturity of living organisms. At present a great number of environmental issues, have grown in size and complexity day by day, threatening the survival of mankind on earth. A study of environmental studies is quite essential for handling environmental disasters and industrial management. The objective of environmental studies is to enlighten the masses about the importance of the protection and conservation of our environment and control of human activities which has an adverse effect on the environment.

Course Contents:

Module I: The multidisciplinary nature of environmental studies

Definition, scope and importance, Need for public awareness

Module II: Natural Resources - Renewable and non-renewable resources

Natural resources and associated problems

Forest resources: Use and over-exploitation, deforestation, case studies, timber extraction, mining, dams and their effects on forests and tribal people.

Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.

Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies.

Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies.

Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources, case studies.

Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification.

- Role of an individual in conservation of natural resources.
- Equitable use of resources for sustainable lifestyles.

Module III: Ecosystems

Concept of an ecosystem: Structure and function of an ecosystem, producers, consumers and decomposers, energy flow in the ecosystem, ecological succession, food chains, food webs and ecological pyramids, introduction, types, characteristic features, structure and function of the following ecosystems:

- a. Forest ecosystem
- b. Grassland ecosystem
- c. Desert ecosystem
- d. Aquatic ecosystems (ponds, streams, lakes, rivers, ocean estuaries)

Module IV: Biodiversity and its conservation

Introduction – Definition: genetic, species and ecosystem diversity, biogeographical classification of India, value of biodiversity: consumptive use, productive use, social, ethical aesthetic and option values, biodiversity at global, national and local levels, India as a mega-diversity nation, hot-spots of

biodiversity, threats to biodiversity: habitat loss, poaching of wildlife, man wildlife conflicts, endangered and endemic species of India, conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

Module V: Environnemental Pollution

Definition, causes, effects, and control measures of: air pollution, water pollution, soil pollution, marine pollution, noise pollution, thermal pollution, and nuclear pollution.

Solid waste management: causes, effects and control measures of urban and industrial wastes, role of an individual in prevention of pollution, pollution case studies, disaster management: floods, earthquake, cyclone, and landslides.

Module VI: Social Issues and the Environment

From unsustainable to sustainable development, Urban problems related to energy

Water conservation, rain water harvesting, and watershed management

Resettlement and rehabilitation of people, its problems and concerns, case studies

Environmental ethics: issues and possible solutions

Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust, case studies

Wasteland reclamation

Consumerism and waste products

Environmental Protection Act, Air (Prevention and Control of Pollution) Act, Water (Prevention and control of Pollution) Act, Wildlife Protection Act, Forest Conservation Act, Issues involved in enforcement of environmental legislation, Public awareness

Module VII: Human Population and the Environment

Population growth, variation among nations

Population explosion – Family Welfare Programmes, Environment and human health

Human Rights, Value education, HIV/ AIDS, Women and child welfare

Role of information technology in environment and human health, Case studies

Module VIII: Field Work

Visit to a local area to document environmental assets-river/ forest/ grassland/ hill/ mountain

Visit to a local polluted site – urban / rural / industrial / agricultural

Study of common plants, insects, and birds

Study of simple ecosystems-pond, river, hill slopes, etc (Field work equal to 5 lecture hours)

Examination Scheme:

Components	CT	HA	S/V/Q	A	EE
Weightage (%)	15	5	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, A: Attendance, EE: End Semester Examination

Course: Ecology and Ecosystem Dynamics
Semester: I

Credit : 3
Course code : ENV4101

Course objective: The course will lead the students through different levels of the living world starting from ecological principles, parameters and analytics to organisms, continuing through populations and introducing finally communities and ecological succession. Structure, function, and process of ecological sciences are main components of this course.

Module I: Ecosystem: Earth as a life support system, components and organization, limiting factors, Laws of limiting factors – Liebig's law of minimum, Shelford's law of tolerance, adaptation, habitat and niche, Keystone species; population parameters - structure, growth regulation, interactions between populations, life history strategies (r and k species), concept of carrying capacity; Growth Model (Prey-Predator, Lotka- Volterra, Leslie's matrix model); Soil: types, composition, and formation, soil origin, texture, horizons and profile, soils of the world and India.

Module II: Ecosystem analysis: Synecology, species area relations, methods of sampling, community coefficients, association analysis, ecological succession, succession models and concept of climax; Human population dynamics, Human ecology.

Module III: Framework of ecosystem: Structure and function of ecosystems, productivity, decomposition, energy flow, ecological efficiency, global pattern of productivity, biogeochemical cycling (pool, fluxes, and residence time), major biomes of India and the world, ecosystem services: scope, application, model, and case studies.

Examination Scheme:

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

Course: Earth System Sciences
Semester: I

Credit : 3
Course code : ENV4102

Course objective: The purpose of the course is to develop a holistic understanding of earth as a system. It attempts to illustrate the reasons for why things happen in nature, the way they happen and how humans have adapted and influenced the natural processes. The course will have application in ecosystem management, conservation and understanding of environmental hazards through in-depth understanding of earth processes. It provides vital inputs to grasp the concept of sustainable development in context of global and regional level.

Module I: The Universe: concepts and origin of solar system and planets, shape and size of the Earth - structure and composition of Earth's interior and surface, plate-tectonic processes, weathering and erosional processes, Earth processes, geological cycle, tectonic cycle, and rock cycle.

Module II: Marine environment: Coastal environment, coastal erosion, and stabilization, relief of the ocean floor, origin, and chemical composition of sea water, vertical and horizontal distribution of temp and salinity, waves and tides, ocean currents, Global distribution of major ocean currents, sea level change and its impact on coastal areas.

Module III: Physiography of India: Environmental setting of India: Structure and relief, drainage system, and watersheds, Rainfall patterns, floods and droughts. India's agriculture (Types, cropping pattern, green revolution and food security), land use planning in India.

Examination Scheme:

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination

Books Suggested:

1. Carla Montgomery (2011) Environmental Geology, McGraw Hill, Ryerson
2. Edward A. Keller (9th edition) Environmental Geology, Prentice Hall, USA 9th
3. Tom Garrison (2011) Essential of Oceanography, Brooks/Cole CENGAGE learning.
4. Press F. & Siever R. Understanding Earth 9th edition, W. H. Freeman; 4 edition (July 17, 2003)

Course: Environmental Biology
Semester: I

Credit : 2
Course code : ENV4103

Course objective: The purpose of the course is to focus on the contribution of microbial ecology in the management, restoration, and sustainability of the biosphere. The role of microbial communities in ecosystem both in natural and managed ecosystems, and their influence on environmental quality and sustainability will be discussed in detail. The objective of the course would be to review the role of microbial communities and their processes in order to conserve and restore the ecosystem

Module I: Environmental Biochemistry: Proteins - biologically important proteins, biological functions of proteins, Nucleic acids – DNA, RNA, biological functions of nucleic acids, biochemical degradation of pollutants, bioconversion of pollutants.

Module II: Environmental Microbiology: Microbes in agriculture - biological nitrogen fixation, bio-fertilizers, mycorrhiza; Food microbiology - micro-organisms in food production, food poisoning and its prevention; Classification, characteristics, occurrence and ecological significance of microorganisms, photoautotrophs, chemoautotrophs, chemolithotrophs, organotrophs; Soil microorganisms and their interactions, microbial toxins, Microbial diseases of plants and their effects on the ecosystem.

Module III: Microbial Process & Applications: Microflora of atmosphere - sampling techniques, identification of aeroallergens, airborne diseases, and allergies, microbes, and pollution abatement, Environmental biotechnology: introduction, genetic engineering, and its applications, Gene-Bank, Tissue culture, Fermentation, Enzyme technology.

Examination Scheme:

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

Books Suggested:

1. Fundamentals of Ecology: E. P. Odum
2. Botany: A. C. Dutta; Oxford University Press, Calcutta
3. Aquatic Ecosystems: Kumar, APH Publications
4. Microbiology 6th Ed: Purohit, Agrobios
5. Global environmental Biotechnology: D. L. Wise
6. Methods in Biotechnology: Hans Peter Schmauder

Course: Chemistry of Environment
Semester: I

Credit : 3
Course code : ENV4109

Course objective: The course is designed to make the student understand various aspects of chemistry which are significant to environmental science and get knowledge of various analytical techniques required for research. An understanding about various types of pollution, their control measures and emerging trends will also be achieved. The course will also give an idea about impact of pollution on the environment and health.

Module I: Environmental Chemistry: Concept and scope, Gibb's free energy, chemical potential, phase equilibrium, stoichiometry, acid base reactions, Solubility and solubility product, The carbonate system, solutions: normality, molality, and molarity.

Module II: Air and Water Chemistry: Properties of water, water quality parameters: Physical, Chemical & Biological parameters, composition of seawater and physico-chemical speciation in oceans, pesticides in water; Chemical composition of atmosphere; Photochemistry of atmosphere; Chemistry of particulate matter, ozone, aerosols, photochemical smog, and acid rain.

Module III: Soil and Toxic Chemicals Chemistry: Chemical composition of Soil; Cation exchange capacity of soil, acid-base, and ion-exchange reactions in soil; Acidity, Salinity and Alkalinity in Soil; Biochemical aspects of arsenic, cadmium, lead, mercury, carbon monoxide, O₃, PAN, pesticides, insecticides, and MIC, carcinogens in the air, PAH's, PCB's, dioxins, and dibenzo furans; Chemistry of hydrocarbon decay and green chemistry.

Examination Scheme:

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

Books Suggested:

1. Masters G.M. (2004) Introduction to Environmental Engineering and Science, 2nd Edition, Pearson Education.
2. Buell P. and Girard J. (2002) Chemistry Fundamentals: An Environmental Perspective (2nd edition), Jones & Bartlett Publishers.
3. Cunningham W.P. and Cunningham M.A. (2007) Principles of Environmental Science: Inquiry and Applications, TataMcGraw-Hill.
4. Miller G.T. (2001) Environmental Science, (eighth edition), Brooks/Cole.
5. Pepper I.L., Gerba C.P. and Brusseau M.L. (2006) Environmental and Pollution Science, (2nd edition) Academic Press.
6. Fundamentals of Environmental Chemistry:- Stanley E. Manahan.

Course: Environmental Physics & Energy
Semester: I

Credit : 3
Course code : ENV4110

Course objective: The aim of this course is to facilitate the students with the concepts of energy and various renewable and non-renewable resources. A general idea of the production and utilization scenario with respect to energy resources and its impact on environment will be dealt with. The significance of energy in Indian scenario and possible alternatives would be overviewed with a brief study of policy prospective of energy sectors.

Module I: Environmental Physics: Thermodynamics: Energy, Entropy laws, Heat Transfer, Thermal conductivity, diffusivity; Fourier's equation for heat conduction - its solution for rectilinear and radial (spherical and cylindrical) flow of heat, Matter and Energy Exchange, Basic assumptions of kinetic theory, Ideal gas approximation, deduction of perfect gas laws, Black- Body Radiation, Energy Budget of Earth and associated processes.

Module II: Non Renewable Energy Sources: Fossil fuels (coal, oil and natural gases): Classification, reserve and geographical distribution; Environmental impact of production and consumption of fossil fuels; Hydrocarbons: formation, reserves, production, refining, and transport of petroleum products.

Module III: New/ renewable Energy Sources: Production, consumption, and potential, Solar Spectrum, solar thermal energy, solar photovoltaic, hydroelectricity, tidal power, wind energy, geothermal energy, OTEC, fuel cell (hydrogen fuel cell, metal hydrate fuel cell, and microbial fuel cell), Biomass and Bio fuels; Nuclear energy: chemistry, feasible material, nuclear reactors, nuclear fuel cycle, and environmental issues, current potential, achievements, and future prospects of renewable energy, Energy conservation policies.

Examination Scheme:

Course: Analytical Laboratory I
Semester: I

Credit : 3
Course code : ENV4107

1. Determination of minimum size of quadrat for community study.
2. Determination of density, frequency, abundance, and dominance of plant species using quadrat method.
3. Calculation of the Importance Value Index (IVI) of species.
4. Study of ecological adaptation of Hydrophytes and Xerophytes
5. Determination of hardness (Ca, Mg, and total) and alkalinity of water.
6. Determination of total dissolved solids (TDS) in waste water
7. Determination of residual chlorine in water sample.
8. Determination of Dissolved Oxygen (DO) of wastewater.
9. Determination of Biological Oxygen Demand (BOD) of waste water.
10. Determination of Chemical Oxygen Demand (COD) of waste water.
11. Visit of wastewater treatment plant to understand various unit operations.

Books Suggested:

1. Misra, R. (1968) Ecology Workbook, Oxford & IBH Publications Co., New Delhi.
2. American Public Health Association (2012) Standard Methods for Examination of Water and Wastewater, APHA, AWWA, WPCF, American Public Health Association Inc., Springfield, New York.

Course: Term Paper/ Seminar
Semester: I

Credit : 1
Course code : ENV4131

Objectives:

The objective of this course is to judge the understanding as well as application of the knowledge gained by the students. The aim of the term paper/ seminar is to provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking examination and analysis of various aspects of environmental issues at a level commensurate with the learning outcomes of the various courses taken up by them in the ongoing semester.

A term paper/ seminar is primarily a record of intelligent reading in several sources on a particular subject. The students will choose the topic at the beginning of the session in consultation with the faculty assigned.

Guidelines:

- Choosing the topic: contemporary issue and will be given by the department
- Finding relevant materials
- Presentation: before the commencement of Semester examinations
- Response to queries
- Submission of the write-up

Presentation of the seminar will be of 30 min maximum (25 min presentation and rest question answer session)

Examination Scheme:

Organisation and Relevance of Content	Literature Review	Bibliography	Presentation	Response to the Queries	Total
30	10	10	40	10	100

Course: Pollution Control and Management
Semester: II

Credit : 3
Course code : ENV4201

Course objective: The course aims at giving detailed knowledge about different pollution control and management strategies. The course will also deals with the sources of pollution in air, soil, water, soil, and also noise and their impact on the environment and health.

Module I: Air Pollution and Control: Air pollution: types of pollutants, sources and effects, ambient air quality standards, wind rose; control methods and devices: particulate matter control: wall collection devices, gravity settlers, centrifugal separators, electrostatic precipitators, dividing collection devices: surface filters, depth filters, scrubbers; gaseous contaminants control: absorption, adsorption, combustion, and condensation; Basic air pollution modeling i.e. Gaussian Plume Model and Box Model.

Module II: Waste Water Treatment: Water pollution: types of pollutants, sources, and effects, water quality parameters and standards, segregation, neutralization; Physical methods: sedimentation, coagulation and flocculation, filtration, and sludge dewatering; Chemical methods: disinfection, removal of hardness, fluoride, arsenic, chromium, iron, and manganese, removal of nitrogen and phosphorus; biochemical methods: aerobic and anaerobic treatment, septic tank, Imhoff tank, oxidation ponds, and aerobic lagoons; Water reuse and recycle.

Module III: Soil and Noise Pollution Control: Soil contaminants, organic and inorganic (including heavy metals): sources and fate, control and abatement of contamination, bioremediation by microorganisms, phytoremediation, and factors affecting uptake of contaminants, Noise pollution: sources and effects, SEL, LAeq, T, L90, L10, SIL, noise control: source reduction, control along the source-receiver pathway, receiver protection, assessing, and predicting noise.

Examination Scheme:

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

Books Suggested:

Course: Environmental Analysis: Tools and Techniques
Semester: II

Credit : 3
Course code : ENV4204

Course objective: The purpose of the course is to develop analytical skills required for environmental monitoring. The students will become familiar with various physical, chemical and biological parameters involved in water, air and soil research. They would also be able to follow various standard protocols used in environmental analysis. With the theoretical knowledge they would also be able to develop their skills to use contemporary tools and techniques required for environmental impact assessment.

Module I: Introduction: Sampling techniques, basic concept of quantitative analysis (Titrimetry, Gravimetry, and Colourimetry); Measurement of Concentration: Principles of Spectrophotometry, Lambert-Beer relationship, atomic spectroscopy; Microscopy; simple, compound, and electron microscope; Electrophoresis and Chromatography.

Module II: Air Pollution Analysis: Ambient air sampling and monitoring: aerosols (SPM and RSPM) and gaseous pollutants, hydrocarbons (HCs), Polycyclic Aromatic Hydrocarbon (PAHs) and Volatile Organic Compounds (VOCs).

Module III: Instrumental Methods of Analysis: Gas chromatography (GC), Atomic absorption/ emission spectrophotometry, Gas liquid chromatography (GLC), High performance liquid chromatography (HPLC), X-ray fluorescence, X-ray diffraction, and flame photometry, Fourier Transform Infrared Spectroscopy (FTIR).

Examination Scheme:

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

Course: Atmospheric Science and Climate Change
Semester: II

Credit : 3
Course code : ENV4209

Course objective: This course would make the students familiar with the dynamics of earth and the factors governing the climate-weather system. Knowledge of various components of climatic system and their interaction with atmosphere/ hydrosphere/ lithosphere would further create curiosity among the students about the climate system modeling and climatic vulnerability. Focus will be given on mitigation and adaptive measures at international and national platform.

Module I: Climatology and Global Climate System: Atmosphere: structure and composition, vertical profile of temperature and pressure; Components of climate system and their interactions; Radiation budget, solar constant, lapse rate, and stability, Fundamental forces (pressure gradient, centrifugal, gravity, and coriolis), surface wind and upper air circulation: jet stream, planetary circulations; western disturbances, Indian ocean dipole, El Niño-Southern Oscillation, madden-Julian oscillation and Indian monsoon.

Module II: Climate Change: Natural variability vs. anthropogenic forcing to climate system, climate sensitivity, paleoclimatology and measurement techniques (tree rings and ice core analysis), climate system modeling (circulation models), green house gases and global warming, concept of vulnerability, sectoral vulnerabilities, impacts, and adaptation.

Module III: Contemporary Issues: International efforts and India's national policy framework for climate change CDM project cycle and modalities, procedures and global carbon market (carbon trade); CO₂ sequestration; Linking climate change mitigation and adaptation.

Examination Scheme:

Course: Geoinformatics for Environmental Management
Semester: II

Credit : 3
Course code : ENV4210

Course objective: This course will develop the skills of students in the field of GIS and remote sensing. It will also give the basic concepts of remote sensing and principles associated with image acquisition and image processing. The role of GIS as a tool in environmental management and knowledge of GPS will be facilitated. This course will also look into the application of remote sensing/GIS in database generation and environmental management.

Module I: Fundamentals of Remote Sensing: Introduction, scope and components of remote sensing; Electromagnetic spectrum, its characteristics and interaction with atmosphere and earth's surface, Platforms and Sensors, Spectral Signature, Albedo, Atmospheric Window, Aerial photography, Multispectral remote sensing, Elements of visual image interpretation, Digital Image Processing: Rectification, enhancements, Classification: unsupervised, supervised, hybrid, and accuracy assessment; Concept of Digital Elevation Model; microwave remote sensing.

Module II: Geographic Information System (GIS): Map: definition, types, scale, and projections; Introduction, definition and components of Geographic information system; Functional elements: Data in GIS, Raster and Vector data structure, Data input methods: keyboard entry, manual digitizing, scanning and automatic digitizing, accuracy, precision, and resolution, consistency, completeness. Basics, satellite generation, positioning services, GPS details, integration, and coordinate systems.

Module III: Remote Sensing and GIS - application in environmental management: Techniques and applications of remote sensing in Water resource management, Land use land cover mapping, Forest cover/ type mapping, Habitat analysis, Biodiversity characterization, Environmental monitoring, Geo-hazard assessment), National initiatives (NNRMS/NRDMS and ISRO-DOS).

Examination Scheme:

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

Books Suggested:

1. Dutta A (2001) Biodiversity and Ecosystem Conservation. Kalyani Publisher, Kolkata.
2. JhaLK (1997) Natural Resource Management. APH Publishing Corporation, New Delhi.
3. Nalini KS (1993) Environmental Resources and Management, Anmol Publishers. Owen OS & Chiras DD (1995) Natural Resources Conservation. Prentice Hall India.

Course: Statistical Tools and Research Methodology
Semester: II

Credit : 2
Course code : ENV4211

Course objective: The course aims to address the issues related to acquisition and analysis of environmental data and use of statistics in solving them. The students will have an insight into extracting information and analysis of data through various statistical tools and techniques. A preliminary introduction to fundamental concepts of research would make them understand the intricacies of writing and proposing research ideas and hypotheses.

Module I: Introduction: Basic elements and tools of statistical analysis, measurement of central tendency, measures of dispersion: absolute and relative measures, range, standard deviation, variance, quartile deviation, coefficient of variability, skewness, kurtosis, probability: probability distribution functions and their applications, data sampling, sampling locations, times, distributions and types, sampling theory.

Module II: Statistical Methods: Hypothesis testing, significance and correlation, correlation coefficients, linear models and regressions: multiple regressions, distribution- normal, t and chi square test, test of hypothesis and significance, analysis of variance, computer-based modeling: linear, regression, validation and forecasting, difference among means: F-test: 1 way ANOVA, F-test: 2 ways ANOVA.

Module III: System Analysis & Research Methodology: Introduction to research ethics and plagiarism; Mathematical models-deterministic and stochastic, generation of environmental data, stochastic processes in environment, approaches to development of model, validation and forecasting, Perspective of research, sample proposals, framing a statement of the problem (objective), literature survey, methodology of research.

Examination Scheme:

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

Books Suggested:

1. John J. Schiller, Seymour Lipschutz, Schaum's Outline of Probability and Statistics, 4th Edition, Tata McGraw-Hill Education.
2. Manly (2001) Statistics for environmental science and management, Chapman and Hall /CRC.
3. Wayne, R. Ott (1995). Environmental Statistics and Data Analysis, CRC Press.
4. Shaefer S.J. and Theodore L. (2007) Probability and Statistics Applications for Environmental Science, CRC Press, Boca Raton, FL.
5. Csuros M. (1997) Environmental Sampling and Analysis, Lab Manual, Lewis Publishers, Boca Raton, FL.
6. Strunk W. and White E.B. (1999). The Elements of Style, Longman; 4th Edition.

Course: Analytical Laboratory II
Semester: II

Credit : 3
Course code : ENV4212

1. Study of toposheet for geographic information and spatial data types.
2. Description of base map with attributes and image data.
3. Data entry and preparations (input, editing and attributing)
4. Element of Image Interpretation, Image enhancement, Image registration and Georeferencing.
5. Image classifications for land use/ land cover using ERDAS, PCI Geomatica and ENVI.
6. GIS Software, introduction to open source GIS
7. Thin layer paper chromatography analysis of organic compounds.
8. Determination of SPM and RSPM in ambient air by high volume sampler.
9. Monitoring of Air Quality Parameters using Sun Photometer.
10. Sampling and measurement of black carbon in the ambient air.
11. Soil analysis: pH, organic carbon, moisture, water holding capacity, and nutrients.

Book Suggested:

1. Shryock, H.S. (1976) *The methods and Materials of Demography*, Academic Press, New York.
2. Gurumani, N. (2006) *Research Methodology for Biological Sciences*, MJP Publishers, Chennai.

Course: Term Paper/ Seminar
Semester: II

Credit : 1
Course code : ENV4231

Objectives:

The objective of this course is to judge the understanding as well as application of the knowledge gained by the students. The aim of the term paper/ seminar is to provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking examination and analysis of various aspects of environmental issues at a level commensurate with the learning outcomes of the various courses taken up by them in the ongoing semester.

A term paper/ seminar is primarily a record of intelligent reading in several sources on a particular subject. The students will choose the topic at the beginning of the session in consultation with the faculty assigned.

Guidelines:

- Choosing the topic: contemporary issue and will be given by the department
- Finding relevant materials
- Presentation: before the commencement of Semester examinations
- Response to queries
- Submission of the write-up

Presentation of the seminar will be of 30 min maximum (25 min presentation and rest question answer session)

Examination Scheme:

Organisation and Relevance of Content	Literature Review	Bibliography	Presentation	Response to the Queries	Total
30	10	10	40	10	100

Course: Project (Field Survey)
Semester: II

Credit : 2
Course code : ENV4232

Objectives:

The aim of the project is to provide the students with an opportunity to explore the natural environment for enhancing their knowledge and understanding about various components of environment, human interaction and impact. The project may involve field visits to various places i.e. forested area, natural landscape, pond, lake, river, dam, wastewater treatment plant etc. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report. The student will need to submit a report in the end.

Guidelines for Report:

- a) Title: It will be given by student
- b) Introduction: about the particular site/habitat.
- c) Observations and significance
- d) Presentation and queries
- e) Submission of the report

Presentation of the report will be of 15 min maximum (10 min presentation and rest question answer session)

Examination Scheme:

Organisation and relevance of content	Introduction	Bibliography	Presentation	Response to the queries	Total
30	10	10	40	10	100

Course: Environmental Conservation & Sustainable Development **Credit** : 3
Semester: III **Course code** : ENV4301

Course objective: The paper aims at providing insight into human dimension of development and management of natural resources. It will develop an understanding of biodiversity in the context of ecosystem dynamics, ecosystem functioning and provision of ecosystem services alongwith an introduction to basic conservation methodologies. An approach towards the challenges encountered for sustainability would also be looked at to enable the students' focus on complex relationships between social, economic and environmental processes.

Module I: Resource conservation : Natural resources: classification, concept, global vs regional issues and challenges of Forest, Grasslands & Mangroves, Water resources, Mineral and Energy resources, Food resources, Land & Soil resources: Coastal zone management, coral reefs. Natural Resource Management: concept, approaches and challenges, Traditional knowledge and Natural resource conservation.

Module II: Biodiversity: Biodiversity: Definition, levels, gradients, distribution; global & regional, ecosystem services, Indicators, Measurements & Hotspots of Biodiversity, Biodiversity loss: global and regional scenario, threats, Biodiversity conservation & restoration: historical prospects, Red data book and IUCN categorization, methods and tools, national and global efforts.

Module III: Sustainable development : Sustainable Development: definition, historical prospects, principals, measurements and Millennium Development Goal (MDGs), Sustainable Development Goal (SDGs), Challenges and responses to sustainable development: global and regional issues and efforts.

Examination Scheme:

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

Books Suggested:

1. World Commission on Environment and Development (1987) Our Common Future, Oxford, OUP.
2. An Introduction to Sustainable Development (2008) by Peter P. Rogers, Kazi F. Jalal, John A. Boyd., Glen Education Foundation. Inc. USA
3. Primack R.B. (2006) Essentials of Conservation Biology (4th ed.), Sinauer Associates, Sunderland.
4. Ecological Diversity and Measurement by Magurran, A.E. Princeton University Press. New Jersey.
5. Millennium Ecosystem Assessment Report, 2005.
6. The Living planet index.
7. UN Millennium Project (2005) Innovation: Applying Knowledge in Development, Science, Technology and Innovation Task Force Report.
8. Contemporary research publication on relevant area of subject for greater understanding updated time to time.

Course: Water Resources Management
Semester: III

Credit : 3
Course code : ENV4313

Course objective: The course is designed to make the students aware about the availability and assessment of water resources along with various terminologies associated. An understanding about the need to conserve water has to be made. An approach to watershed development and various principles, common guidelines and policies will be overviewed.

Module I: Water in ecosystem World water inventory, hydrologic cycle, precipitation and runoff: global water balance and Indian scenario, , aquifers (confined and unconfined), quality and quantity of ground water and its usefulness in water supply; Rainwater harvesting; Agriculture and environmental impacts of Irrigation System; crop water management; agro-climatic zonation and crop planning (reference to India).

Module II: Watershed management: Wetlands: Management and Conservation; Ramsar convention, objectives and strategy. Concepts and principles of Watershed Management, water budgeting, land-use and land-cover classification, resource appraisal, water and soil conservation measures: (a) drain-line treatment; (b) area treatment, watershed as unit of sustainable development, selection of plant species for plantation, organic farming and organic fertilizers, watershed development in India.

Module III: Water conservation, conflicts and challenges: Water crisis, water footprint, atmosphere continuum (SPAC), water use efficiency (WUE), water auditing, water treatment, recycling and reuse, water sharing and conflicts, current water issues in India: Narmada Dam, Tehri, Almetti Dam, Sardar Sarovar, Interlinking of rivers and river basin management.

Examination Scheme:

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

Course: Eco-toxicology, Health and Safety
Semester: III

Credit : 3
Course code : ENV4314

Course objective: Development of knowledge and skills to reinforce the attitudes and behaviors required for safe and environmentally sound work habits. Another aspect of eco-toxicology would deal with effects of various toxic materials posing adverse environmental health. A brief overview of industrial hazards and safety management will keep the students updated about occupational health.

Module I: Overview of Environmental Health: Public exposure from industrial sources, hazards by industry, major chemical contaminants at workplace, industrial environmental accidents, Hospital Waste Management.

Module II: Eco-toxicology: Toxicity: case studies (F, As, Hg etc.), entry, movement and fate (biotransformation, bioaccumulation and biomagnifications) of pollutants in ecosystems, natural toxins: animal toxins, snake venoms, plant toxins, metals, pesticides, POPs: portals of entry and toxic effects, chromosome damage, gene mutation, factors influencing toxicity, environmental carcinogenesis: chemical carcinogenesis, organic carcinogens, metal carcinogens, occupational cancer, toxicity testing, test organisms used in bioassays, coliform bacteria count and MPN method, dose response curves, LC50, LD50.

Module III: Industrial Safety: Public health, personal hygiene, food adulterants, diseases (deficiency, infection, pollution, occupational and communicable) prevention and control, management of hygiene in public places, occupational health and safety, hazards - physical, chemical and biological, industrial safety standards and regulations, accidents - prevention and control, good manufacturing practices (GMP) and good laboratory management practices (GLP), OSHA & NIOSHA.

Examination Scheme:

Components	A	CT	HA	EE

Course: Waste Management & Valorization
Semester: III

Credit : 2
Course code : ENV4315

Course objective: The course would comprise of general introduction and various components of solid waste. It would cover the characterization, collection, treatment and disposal techniques and related environmental issues. Students would be conceptualized with the onsite vs. offsite waste management as well as integrated waste management.

Module I: Introduction: Sources and characterization of solid and hazardous wastes, hazard identification, risk characterization, and exposure assessment. health and environmental impacts of solid and hazardous waste management, integrated waste management strategy: reduce, recover/ reuse and recycling.

Module II: Waste Management: Methods of waste collection, storage and transportation, treatment and disposal techniques for solid waste - landfill operation and maintenance, Leachate collection and treatment , composting, (advantages and limitation), vermin-composting, incineration, Pyrolysis, biogas plant, , Techniques of hazardous waste treatment and safe disposal, Nuclear and e-waste management.

Module III: Waste Valorization from Residues: Biomass & Bio-fuels: Environmental & economic aspects; Bio-fuels from agro residues, Clean technologies concepts for the biological conversion of wastes- aerobic and anaerobic;

Examination Scheme:

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

1. Use of microscope: bacterial morphology and staining methods.
2. Biological examination of water: algae and bacteria
3. Isolation of fungi from environmental samples
4. Standard plate count
5. Bacterial water quality: Measuring quality of water by using coli form organisms (MPN method and membranefilter).
6. Estimation of sugars, proteins, lipids.
7. Water analysis: Maximum Probable Number (of Bacteria), E.coli
8. Experiments related to Microbiological analysis of waste water MPN, Total and Faecal coliforms [in potable water], and other organisms.
9. Process and analysis of biological composting and vermicomposting.

Course: Term Paper/ Seminar (Research Article)
Semester: III

Credit : 1
Course code : ENV4331

Objectives:

The objective of this course is to judge the understanding as well as application of the knowledge gained by the students.

The aim of the term paper/seminar is to provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking examination and analysis of various aspects of environmental issues at a level commensurate with the learning outcomes of the various courses taken up by them in the ongoing semester.

A term paper/ seminar is primarily a record of intelligent reading in several sources on a particular subject. The students will choose the topic at the beginning of the session in consultation with the faculty assigned.

A workshop is primarily an activity based academic event where the students practically obtain hands on experience on any aspect of their learning. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

Major Themes

- Waste to energy
- Green building
- Disaster management
- Renewable energy
- Climate change and adaptation
- Remote sensing and GIS
- Wild life management
- Sustainable practices

These themes are merely indicative and other recent and relevant topics of study may be included.

Guidelines for term paper/ seminar:

- Choosing the topic: contemporary issue/ relevant study material will be given by the department
- The participants are expected to explore the topic in advance and take active part in the discussions
- Presentation: before the commencement of Semester examinations
- Group Activities have to be undertaken by students as guided by the trainer in a workshop.
- Response to queries
- Submitting a write up of at least 500 words about the learning outcome from the workshop/term paper.

Presentation of the seminar will be of 30 min maximum (25 min presentation and rest question answer session)

Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

- Case Study
- Simulation
- Business Planning
- Quiz
- Quality analysis & characterization
- Identification and preparation of materials

Examination Scheme:

Organisation and relevance of content	Literature Review	Bibliography	Presentation	Response to the queries	Total
30	10	10	40	10	100

Course: Summer Internship Evaluation +Project Formulation
Semester: III

Credit : 6
Course code : ENV4335

Methodology:

Practical training is based on the theoretical subjects studied by the students. It can be arranged within the college or in any related industrial unit/ research organization. The students shall get a chance for practical exposure to various industrial processes, technical and experimental research skills. In case of on campus training the students will be given specific tasks which may be experimental or observation and analysis based i.e. analysis of water, air and soil, biodiversity analysis, short term project, data generation and analysis etc. On completion of the practical training the students are to present a report covering various aspects learnt by them and give a presentation of the same. The summer internship may further lead to Major project formulation for lastsemester.

Examination Scheme

Feedback from Industry	Training Report	Viva	Presentation	Total
10	30	30	30	100

Course: Environmental Biotechnology
Semester: III

Credit : 3
Course code : ENV4309

Course objective: Environmental biotechnology utilizes microorganisms to exploit biotic resources for environmental management practices. This management includes treatment of contaminated water and wastewater, clean up of industrial waste streams, and remediation of soils contaminated with hazardous and toxic chemicals and application of biotechnology in improvement of environment quality. Environmental biotechnology is essential to society and truly important as a technical discipline.

Module I: Bioremediation and metagenomics: Bioremediation: concept and types (natural and engineered): bio- attenuation, ex-situ and in-situ, bio-augmentation and bio-stimulation, advantages and disadvantages, bioremediation to control pollution e.g. solid waste, sewage, industrial effluents, heavy metals, radioactive substances and oil spill, Metagenomics: environmental and community genomics, the study of genetic material recovered directly from environmental samples and future applications in bioremediation, Genetically modified organisms (GMO's) and bio- safety.

Module II: Industrial biotechnology: Maintenance of stock cultures, culture collection centers/microbial gene banks, inoculum build-up, industrial substrates, design of a bioreactor, batch and continuous fermentation and solid-substrate fermentations, immobilization technologies, microbial production of food (SCP), essential prerequisites for organisms to be used as SCP and as food and feed supplements, microbial transformation, accumulation and concentration of metals, metal leaching, extraction and future prospects, biosensors.

Module III: Applied biotechnology: Practical aspects of genetic engineering with microorganisms from extreme environment: use of extremophilic microorganisms in waste treatment and methane production from agro industrial wastes, enzyme production: cellulase, proteases, amylases, alcohol and acetic acid production, biocomposting and biomining, alternate fuels: biofuels, sources and production.

Examination Scheme:

Course: Environmental Geology
Semester: III

Credit : 3
Course code : ENV4310

Course objective: The course is designed to provide a clear knowledge of Earth as a system and the basic concepts influencing the processes and dynamics of Earth. It will also give an understanding of geological processes vis-à-vis the human influences and its implications.

Module I: Earth Processes and Dynamics: Distribution of elements in the solar system and the Earth, chemical differentiation and composition of the Earth, Structure and composition of earth's interior and surface, rocks and minerals and associated processes, Geological time scale.

Module II: Earth Tectonics and Dynamics: Concept of plate tectonics, sea-floor spreading and continental drift, geodynamic elements of Earth: Mid Oceanic Ridges, trenches, transform faults and island arcs, origin of oceans, continents, mountains and rift valleys, earthquake and earthquake belts, volcanoes: types, products and distribution.

Module III: Processes of Soil Formation: Types of soil, soil degradation and changing land use pattern, concepts of natural ecosystems on the Earth and their mutual inter-relations and interactions (atmosphere, hydrosphere, lithosphere and biosphere), Impact assessment of water availability, quality and contamination of surface water and groundwater, atmosphere and air pollution, soil contamination due to urbanization, industrialization and mining, basic tenets of environmental laws.

Examination Scheme:

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

Course: Green Energy
Semester: III

Credit : 3
Course code : ENV4311

Course objective: The purpose of this course is to provide a survey of the most important renewable energy resources, and the technologies for harnessing these within the framework of a broad range of simple to state-of-the-art advanced energy systems. After completion of the course, students will be able to describe the fundamentals and main characteristics of renewable energy sources and their differences compared to fossil fuels.

Module I: Green Energy and Sustainable Development: Clean/ green energy technologies, sustainable development, international agreements/conventions on energy and sustainability: UNFCCC, nuclear energy: fission reactors, fission power and environment, fuel cells: hydrogen fuel cell, metal hydrate fuel cell, microbial fuel cell, renewable energy sources: solar, geothermal, tidal and wind energy, hydropower, ocean thermal energy conversion (OTEC), energy use pattern: India and global, renewable energy management in India.

Module II: Solar Energy: Solar radiation: measurement and prediction, solar collectors: flat plate and concentrating collectors, solar heating of buildings, solar still, solar water heaters, solar driers, conversion of heat to mechanical energy, solar thermal power generation systems, solar photovoltaic: principle, types of solar cells and fabrication, photovoltaic applications: battery charger, domestic lighting, street lighting, water pumping and power generation.

Module III: Energy From Waste – bio-chemical conversion: Anaerobic digestion of sewage and municipal wastes, direct combustion of MSW-refuse derived solid fuel, industrial waste, agro residues, anaerobic digestion, biogas production, land fill gas generation and utilization, present status of technologies for conversion of waste into energy, design of waste to energy plants for cities, small townships and villages.

Examination Scheme:

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

Course: Waste Water Treatment
Semester: III

Credit : 3
Course code : ENV4312

Course objective:

Module I: Water Pollutants: Types and sources, generation and collection of wastewater, sewerage systems, quantities of sanitary wastes and storm water, carrying capacity of rivers.

Module II: Wastewater Characteristics: Waste quality parameters: physical, chemical and biological, water borne diseases, primary, secondary and tertiary treatment, physical unit processes: screening, commutation, grit removal, equalization, coagulation-flocculation, sedimentation, and disinfection.

Module III: Biological Wastewater Treatment Systems: Aerobic processes - activated sludge process and its modifications, trickling filter, RBC, anaerobic processes: suspended growth, attached growth, fluidized bed and sludge blanket systems, natural wastewater treatment systems: ponds and lagoons, phytoremediation, wetlands and root-zone systems, operation and design aspects.

Module IV: Advanced Wastewater Treatment: Iron and manganese removal, colour and odour removal, activated carbon treatment, ion exchange, electro-dialysis, reverse osmosis and fluoride management, nitrogen and phosphorus removal, heavy metals removal, oil and refractory organics removal, micro-screening, ultra-filtration, centrifugation, wastewater disposal standards, sludge digestion and handling, disposal of effluent and sludge.

Course: Environmental Law & Environmental Impact Assessment **Credit : 3**
Semester: IV **Course code : ENV4401**

Course objective: The students will have an overview of Environment Impact Assessment and newer approaches related to it. This course aims to acquaint the students with an in-depth knowledge of laws and policies concerned with environmental protection. A brief outline of the efforts being done through global summits and laws implemented at national level would make the students familiar with basic knowledge of environmental law issues.

Module I: Environmental Protection & International Efforts: National Environmental Policy, provisions for environment protection in constitution of India; Ecomark; major environmental movements in India and role of NGOs. United Nations Bodies for environmental protection; Introduction to Stockholm Conference on Human Environment (1972), Nairobi Declaration, Montreal Protocol(1987), Basel Convention (1989 and 1992), Earth summit at Rio de Janeiro (1992), Kyoto Protocol (1997), Earth summit at Johannesburg (2002), CBD, Paris Agreement

Module II: Environmental Laws: Air Pollution Act (1981), Water Pollution Act(1974), Environmental (Protection) Act (1986), Hazardous Wastes Management and Handling Rules(1989), Municipal Solid Waste (Management and Handling Rules) (2000), Public Liability Insurance Act (1991) and Rules(1991), Coastal Regulation Zones (CRZ) Rules (2011),Wildlife (Protection) Act(1972),Forest (Conservation) Act(1980), Biological Diversity Act(2002).

Module III: Environmental impact assessment (EIA): Introduction & Significance of EIA; Environmental impact statement (EIS), environmental management: (EMP& EMS), ISO standards; scope and types of environmental audit, environmental management plan (EMP), eco-management and audit scheme (EMAS); safety management system; Life Cycle Analysis (LCA) and its components.

Examination Scheme:

Components	A	CT	HA	EE

Course: Urban Ecosystem and Industrial Ecology
Semester: IV

Credit : 2
Course code : ENV4402

Course objective: The purpose of this course is to have an understanding of concepts and processes governing urbanization and its impact on natural resources. Students will also be given an exposure about urban space as well as industrial systems and the strategies to emulate ecological systems for minimizing the waste production in urban and industrial processes. The course would also discuss key issues involved with eco-industrial development and some cases from India.

Module I: Urbanization: Global and regional scenario of urbanization: factors and impact, population dynamics and push-pull factors, vegetative distributions in cities (green spaces), land use and GIS, urban green habitat, ecosystem services for cities. Hydrological effects of urbanization (water demand/wet land/ water conservation/waste water); climate resilient cities for sustainable urban habitat, integrating urban and environmental planning framework

Module II: Concepts of Industrial Ecology: origin, definition, environment and the anthrosphere, industrial systems, material resources, societal factors and environmental equity, Systems analysis, industrial metabolism, biological analogies; perspective on industrial ecology from India and other developing countries such as China and Brazil, with case studies.

Module III: Issues of Eco-industrial Development: Components of an industrial ecosystem (Kalundborg example), industrial symbiosis, role of government, community, developers, management, evaluating the success of eco-industrial development, life cycle analysis and assessment: life cycle of products, processes and facilities.

Examination Scheme:

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

Course: Natural Hazards and Disaster Management
Semester: IV

Credit : 2
Course code : ENV4403

Course objective: This paper introduces the students to various environmental hazards, their causes, nature, preparedness and assessment of loss. It teaches them to model hazards and familiarizes with methods of management of disasters and consequently risk zonation.

Module I: Introduction: Disaster: nature and causes, climate change and disaster, hazard, risk, vulnerability, impacts of disasters: health, physical and socio-economic.; Natural hazard profile of India.

Module II: Natural and Human Induced Hazards: Hazards: classification, causes, impact and prediction; floods and droughts; drought and its management-causes and impacts, water conservation practices for deserts, mass wasting/ landslides; avalanche; nature and causes of volcanoes. Human induced hazards: hazards due to dams/ reservoirs, nuclear power plants, industrial and occupational hazards, tropical cyclones and tsunami, sea level change and its impact on coastal areas.

Module III: Disaster Management Cycle: disaster preparedness: preventive measures, early warning system; Mitigation: disaster risk reduction (DRR), the emergency operation plan (EOP); Response and recovery; Applications of science, technology and engineering in disaster management.

Examination Scheme:

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

Course: Term Paper/ Seminar (Research Article)
Semester: IV

Credit : 1
Course code : ENV4431

Objectives:

The objective of this course is to judge the understanding as well as application of the knowledge gained by the students. The aim of the term paper/ seminar is to provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking examination and analysis of various aspects of environmental issues at a level commensurate with the learning outcomes of the various courses taken up by them in the ongoing semester.

A term paper/ seminar is primarily a record of intelligent reading in several sources on a particular subject. The students will choose the topic at the beginning of the session in consultation with the faculty assigned.

Guidelines:

- Choosing the topic: contemporary issue and will be given by the department
- Finding relevant materials
- Presentation: before the commencement of Semester examinations
- Response to queries
- Submission of the write-up

Presentation of the seminar will be of 30 min maximum (25 min presentation and rest question answer session)

Examination Scheme:

Organisation and Relevance of	Literature Review	Bibliography	Presentation	Response to the Queries	Total
30	10	10	40	10	100

GUIDELINES FOR PROJECT FILE AND PROJECT REPORT

Research experience is a professional problem-solving activity and is equally significant as any other aspect of the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critically analyzed by the faculty guide and corrected by the student at each stage.

PROJECT FILE

The Project File may be a very useful tool for undertaking an assignment along-with a normal semester, an exploratory study, sponsored projects, a project undertaken during summer period or any other period as per curricula where the researcher is working with a company/organization. The project/ assignment may also be a part of the bigger research agenda being pursued by a faculty/ institution/ department.

The Project File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation. This file may be considered in continuous assessment.

In general, the File should be comprehensive and include:

- A short account of the activities that were undertaken as part of the project;
- A statement about the extent to which the project has achieved its stated objectives;
- A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;
- Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;
- Any problems that have arisen and may be useful to document for future reference.

PROJECT REPORT

The Project Report is the final research report that the student prepares on the project assigned to him. In case of sponsored project the layout of the project could be as prescribed by the sponsoring organization. However, in other cases the following components should be included in the project report:

➤ Title or Cover Page

The title page should contain Project Title; Student's Name; Programme; Year and Semester and Name of the Faculty Guide.

➤ Acknowledgement(s)

Acknowledgment to any advisory or financial assistance received in the course of work may be given. It is incomplete without student's signature.

➤ Abstract

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have

to be an entire summary of the project, but rather a concise summary of the scope and results of the project. It should not exceed more than 1000 words.

➤ **Table of Contents**

Titles and subtitles are to correspond exactly with those in the text.

➤ **Introduction**

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

➤ **Materials and Methods**

This section should aim at experimental designs, materials used (wherever applicable). Methodology should be mentioned in detail including modifications undertaken, if any. It includes organization site(s), sample, instruments used with its validation, procedures followed and precautions.

➤ **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing this section, emphasis should be laid on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary, do not write in “point” form.

While presenting the results, write at length about the various statistical tools used in the data interpretation. The result interpretation should be simple but full of data and statistical analysis. This data interpretation should be in congruence with the written objectives and the inferences should be drawn on data and not on impression. Avoid writing straight forward conclusion rather; it should lead to generalization of data on the chosen sample.

Results and its discussion should be supporting/ contradicting with the previous research work in the given area. Usually one should not use more than two researches in either case of supporting or contradicting the present case of research.

➤ **Conclusion(s) & Recommendations**

A conclusion should be the final section in which the outcome of the work is mentioned briefly. Check that your work answers the following questions:

- Did the research project meet its aims (check back to introduction for state aims)?
- What are the main findings of the research?
- Are there any recommendations?
- Do you have any conclusion on the research process itself?

➤ **Implications for Future Research**

This should bring out further prospects for the study either thrown open by the present work or with the purpose of making it more comprehensive.

➤ **Appendices**

The Appendices contain material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

➤ **References**

References should include papers, books etc. referred to in the body of the report. These should be written in the alphabetical order of the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

Examples:

For research article:

Voravuthikunchai, S.P., Lortheeranuwat, A., Ninprom, T., Popaya, W., Pongpaichit, S., Supawita, T., Photocatalytic treatment of tannery wastewater for the removal of toxic compounds, Journal of Environmental Science and Technology, 8 (1): 116-117 (2002).

For book:

Kowalski, M., Biological wastewater treatment for pulp and paper industry, Wastewater Treatment (Eds. P.S. Nutman IBP), 7: 63-67 (1976).

The Layout Guidelines for the Project File & Project Report:

- A4 size Paper
- Font: Arial (10 points) or Times New Roman (12points)
- Line spacing: 1.5
- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3cm

ASSESSMENT OF THE PROJECT FILE AND THE PROJECT REPORT

Essentially, the assessment will be based on the quality of the report, the technical merit of the project and the project execution. Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project. Project execution is concerned with assessing how much work has been put in.

The Project should fulfill the following *assessment objectives*:

- Range of Research Methods used to obtain information
- Execution of Research
- Data Analysis (Analyze Quantitative/ Qualitative information)
- Quality Control
- Conclusions

Assessment

Scheme:

Continuous

Evaluation:

40% (Based on punctuality, regularity of work, adherence to plan and methodology, refinements/mid-course corrections etc. as reflected in the Project File.)

Final Evaluation:

60% (Based on the Documentation in the file, Final report layout, analysis and results, achievement of objectives, presentation/ viva)

 It is recommended that the Final evaluation should be carried out by a panel of evaluators.

AEROSPACE ENGINEERING

Syllabus – First Semester

ASE2153	Elements of Aeronautics	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Physics, Engineering Mechanics, Chemistry				
Co-requisites					

Course Catalog

This course provides basic knowledge and understanding of various kinds of flight vehicles and their classifications based on various aspects. Knowledge of basic physics is crucial to comprehend the contents of this course. This course also provides introductory knowledge to the students about various components and systems of flight vehicles which serve as a foundation for better understanding of advanced course.

Course Objectives

The objective of this course is to

1. Provide introductory knowledge to the students regarding the basic science and principles as applicable to various flight vehicles and their structure.
2. Provide education to the students about the aerodynamics, propulsion, and systems of different types of flight vehicles.

Course Outcomes

On completion of this course, the students will be able to

- CO1. List, explain, and categorize amongst various kinds of flight vehicles and their design.
- CO2. List, explain, and compare amongst various structural components of flight vehicles and loads acting on them.
- CO3. List, explain, categorize, and apply the basic concepts of flight and properties of atmosphere.
- CO4. List, explain, categorize, and apply the basic concepts of propulsion and propulsion systems.
- CO5. List, explain, categorize, and apply the basic concepts of various types of aerospace systems and instrumentations.

Course Content:

Modules	Blooms level*	Number of hours
Module 1: Introduction to Flight Vehicles History and development of flying machines; Classification of flight vehicles; Introduction to prominent design features of - Airplanes, helicopter and other flying machines.	L1, L2, L4	7
Module 2: Aerospace Structure Importance of Strength/Weight Ratio of Materials; Monocoque, Semi-Monocoque and Truss Type Construction; Detailed Description of the Fuselage, Wing and Tail Structures; Loads on Different Parts of the Aerospace Vehicles; Types of Undercarriages.	L1, L2, L4	7
Module 3: Principles of Flight	L1, L2,	7

Course Catalog

This course deals with the techniques of numerical analysis, which gives the solution to applied problem when ordinary analytical method fails. The given techniques can be used in design of engineering and scientific problems. This course provides the basic knowledge and fundamentals related to the concepts of engineering mathematics, errors and approximation theory, interpolation, graph fitting and statistical computation.

Course Objectives

The objective of this course is to

1. Provide an understanding to the students about the space, celestial bodies, trajectories, orbits, and orbital mechanics.
2. Equip the students with knowledge about various types of rockets, satellites and spacecraft, their crucial systems and subsystems.

Course Outcomes

On completion of this course, the students will be able to

- CO1.** List and explain the various peculiarities and properties of space, celestial bodies, manned and unmanned spaceflight.
- CO2.** State and explain elements, principles and laws associated with the motion of orbiting bodies.
- CO3.** Define, explain and compare amongst the various elements and properties related to maneuvering of artificial satellites in orbits.
- CO4.** List, explain, distinguish and compare amongst the different types of rockets and satellites, their design and operation.
- CO5.** Define, explain, distinguish and compare amongst the different systems and subsystems of spacecraft.

Course Catalog

This course contains Fundamental characteristics of standard atmosphere which are crucial for aerodynamic characteristics of airfoil and airplane. The course is designed to make students to understand aerodynamic forces and moments in steady, accelerated flight and in maneuvers for different flight modes and conditions.

Course Objectives

The objective of this course is to

1. Provide an insight to students about the characteristics of atmosphere.
2. Equip students about different forces on airfoil and wing due to immersion in free stream of air in flight.

Course Outcomes

On completion of this course, the students will be able to

- CO1.** Define and explain parameters of International Standard Atmosphere.
- CO2.** State, explain and apply the physical principle in estimation of aerodynamic drag over flight vehicles.
- CO3.** Describe, apply and analyze the aerodynamic characteristics over airfoils and wings of flight vehicles.
- CO4.** Explain and apply the basic equations and principles to analyze the airplane mechanics in steady flight.
- CO5.** Explain and apply the basic equations and principles to analyze the airplane performance in accelerated flight and maneuvers.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Standard Atmosphere Standard atmosphere, pressure, temperature and density altitudes, Relation for stratosphere and troposphere, Stability of atmosphere, Measurement of air-speed: true airspeed, indicated airspeed and equivalent airspeed, Airspeed indicator	L1, L2	7
Module 2: Aerodynamic Drag Drag and its effects, Types of drag and affecting factors, Drag polar, Compressibility drag, Design for minimum drag, Terminal velocity	L1, L2, L3	7
Module 3: Aerodynamic Characteristics Force and Moments coefficients, dimensional analysis, Pressure distribution over 2D airfoil, Variation with angle of attack, Center of pressure, Aerodynamic center and connected problems, Lift, Drag and moment coefficients; Relations between lift and drag, Effect of span, Aspect ratio, plan form, sweep, taper and	L2, L3, L4	7

Syllabus – Fourth Semester

ASE2453	Principles of Stability & Control	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Introduction to Aerospace Engineering, Flight Mechanics, Low Speed Aerodynamics				
Co-requisites					

Course Catalog

This course provides the fundamental knowledge of stability and control of an aircraft. Students will understand the importance of different components of an aircraft in providing stability and giving control to aircraft motion. This course also provides understanding of mathematics behind the designing of aircraft and its components. The content of this course serves as a foundation for advance course of aircraft designing.

Course Objectives

The objective of this course is to

1. Provide understanding of various aspects of stability of an aircraft in flight and how geometric features of control surfaces and their proper angular movements achieve it.
2. Provide an analytical understanding of longitudinal, lateral and directional stability and measures that can be taken to control the same.

Course Outcomes

On completion of this course, the students will be able to

- CO1.** Define and explain the concepts of stability and control as applicable to flight vehicles.
- CO2.** Define, explain, apply and compare the various fundamentals and aspects of stick fixed static longitudinal stability.
- CO3.** Define, explain, apply and compare the various fundamentals and aspects of stick free static longitudinal stability.
- CO4.** Define, explain, apply and compare the various fundamentals and aspects of directional stability and control of flight vehicles.
- CO5.** Define, explain, apply and compare the various fundamentals and aspects of lateral stability and control of flight vehicles.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Introduction Overview of Static and Dynamic Stability of Flight Vehicles; Positive, Negative and Neutral Stability; Types of Moments; Role of Tailplane in Stability and Balancing of Aircraft;	L1, L2	7
Module 2: Stick Fixed Static Longitudinal Stability Introduction to Stick Fixed Longitudinal Stability; Conditions for Longitudinal Stability; Contribution of Wing and Tail; Neutral Point; Centre of Gravity Limits; In-flight Measurement of Stick Fixed Neutral Point.	L1, L2, L3, L4	8

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar

Manesar Gurgaon-122413

Module 3: Stick Free Static Longitudinal Stability Control Surface Hinge Moments; Floating and Restoring Tendencies; The Tab; Effect of Free Elevator on Airplane Stability; Elevator Control Force; Stick Force Gradients; Neutral Point; Controls Free Center of Gravity Limit; In-Flight Measurement of Stick Free Neutral Point.	L1, L2, L3, L4	7
Module 4: Directional Stability and Control Asymmetric Flight; Feather Cock Stability; Conditions for Directional Stability; Contribution of Wing and Tail; Rudder Fixed and Rudder Free Static Directional Stability.	L1, L2, L3, L4	7
Module 5: Lateral Stability and Control Dihedral Effect, Conditions for Lateral Stability; Contribution of Wing and Tail; Aileron Control Power, Adverse Yaw; Roll Control.	L1, L2, L3, L4	7

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

ASE2553	Introduction to Flight Vehicle Design	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Introduction to Aerospace Engineering, Flight Mechanics, Low Speed Aerodynamics				
Co-requisites					

Course Catalog

This course provides basic knowledge and understanding of various aspects and processes of aircraft design. This course provides in-depth knowledge to the students about flow process of carrying out the designing of aircraft, its associated loads and the safety requirements. Based on this course, students will be able to investigate new and emerging design aspects

Course Objectives

The objective of this course is to

1. Provide introductory knowledge to the students regarding the fundamentals of aircraft designing and its structural analysis
2. Provide education to the students about the concepts of different structural members and various associated loads

Course Outcomes

On successful completion of this course, the students will be able to

- CO1.** List and describe the basics of aircraft system design and aircraft structures
- CO2.** Identify, explain and analyze the applicability of design aspects and different aircraft loads.
- CO3.** Identify and explain the design considerations of wings and high lift devices.
- CO4.** Identify, correlate and apply the numerical and theoretical knowledge to investigate new and emerging design aspects

Course Content

Modules	Blooms level*	Number of hours
Module 1: Introduction Aircraft design, requirements and specifications, Different design phases, Importance of each phase. Weight, its importance. Aerodynamic and structural design considerations. Classifications of airplane.	L1, L2	8
Module 2: Air Loads during Flight Ground Loads, Airframe loads, maneuvering loads in flight, Load factor, V-n diagram, gust loads, and estimation of gust loads.	L1, L2, L4	6
Module 3: Wing Design Consideration Selection of airfoil and planform. Span wise air loads variation, BMD and SFD. Weight distribution.	L1, L2	8
Module 4: High Lift Systems Airfoil's maximum lift coefficient, leading and trailing edge devices, effect of	L1, L2	7

ASE2653	Principles of Aerospace Propulsion	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Elements of Aeronautics, Elements of Astronautics				
Co-requisites					

Course Catalog

This course covers the fundamentals of spacecraft propulsion and discusses advanced concepts in space propulsion ranging from chemical to electrical engines. Topics include conventional and advanced propulsion systems, physics and engineering of spacecraft propulsion, and various schemes for accelerating propellants.

Course Objectives

The objective of this course is to

1. Provide introductory knowledge to the students regarding the basic science and principles as applicable to various flight vehicles and their structure.
2. Provide education to the students about the aerodynamics, propulsion, and systems of different types of flight vehicles.

Course Outcomes

On completion of this course, the students will be able to

- CO1.** Define, explain, and apply the different theoretical aspects and associated mathematical principles to spacecraft propulsion.
- CO2.** List, explain, and compare amongst various types, systems and subsystems of chemical propulsion.
- CO3.** Outline, describe, and contrast amongst various types, systems and subsystems of electric propulsion.
- CO4.** Identify, explain, and compare amongst various types, systems and subsystems of nuclear propulsion.
- CO5.** List, summarize and contrast amongst the different advanced propulsion concepts for interstellar travels.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Introduction to Spacecraft Propulsion Overview of Spacecraft Propulsion; Basic Theory of Thermal Jet/Rocket Engines; Launch Vehicle Selection; Newton's Third Law and Rocket Equation; Tsiolkovsky's Rocket Equation.	L1, L2, L3	6
Module 2: Chemical Propulsion Basic Configuration of -Liquid Propellant Engines; Types and Examples; Solid Propellant Rockets; Types and Examples; Hybrid Rocket Motors; Types and Examples; Cryogenic Engines; Types and Examples; Specific Impulse; Propulsive Efficiency.	L1, L2, L4	6

ARTIFICIAL INTELLIGENCE

Syllabus

BASICS OF ARTIFICIAL INTELLIGENCE

Course Code: CSE2351

Credit Units: 03

Course Objective:

To develop semantic-based and context-aware systems to acquire, organize process, share and use the knowledge embedded in multimedia content. Research will aim to maximize automation of the complete knowledge lifecycle and achieve semantic interoperability between Web resources and services. The field of Robotics is a multi disciplinary as robots are amazingly complex system comprising mechanical, electrical, electronic H/W and S/W and issues germane to all these.

MODULE- I

AI problems, foundation of AI and history of AI intelligent agents: Agents and Environments, the concept of rationality, the nature of environments, structure of agents, problem solving agents, problem formulation.

MODULE-II

Searching- Searching for solutions, uniformed search strategies – Breadth first search, depth first Search. Search with partial information (Heuristic search) Hill climbing, A* ,AO* Algorithms, Problem reduction, Game Playing-Adversial search, Games, mini-max algorithm, optimal decisions in multiplayer games, Problem in Game playing, Alpha-Beta pruning, Evaluation functions.

MODULE-III

Knowledge representation issues, predicate logic- logic programming, semantic nets- frames and inheritance, constraint propagation, representing knowledge using rules, rules based deduction systems. Reasoning under uncertainty, review of probability, Baye's probabilistic interferences and dempstershafer theory.

MODULE- IV

First order logic. Inference in first order logic, propositional vs. first order inference, unification & lifts forward chaining, Backward chaining, Resolution, Learning from observation Inductive learning, Decision trees, Explanation based learning, Statistical Learning methods , Reinforcement Learning.

MODULE- V

Expert systems:- Introduction, basic concepts, structure of expert systems, the human element in expert systems how expert systems works, problem areas addressed by expert systems, expert systems success factors, types of expert systems, expert systems and the internet interacts web, knowledge engineering, scope of knowledge, difficulties, in knowledge acquisition methods of knowledge acquisition, machine learning, intelligent agents, selecting an appropriate knowledge acquisition method, societal impacts reasoning in artificial intelligence, inference with rules, with frames: model based reasoning, case based reasoning, explanation & meta knowledge inference with uncertainty representing uncertainty.

ARTIFICIAL NEURAL NETWORKS

Course Code: CSE2451

Credit Units: 03

Module-I

Artificial Neural Networks (ANN) and their biological roots and motivations. ANNs as numerical data/signal/image processing devices. a summing dendrite, synapses and their weights, pre- and post-synaptic signals, activation potential and activation function. Excitatory and inhibitory synapses. The biasing input. Types of activating functions. Encoding (training phase) and decoding (active phase). Taxonomy of neural networks:- feedforward and recurrent networks with supervised and unsupervised learning laws, static & dynamic processing systems, basic data structures: mapping of vector spaces, clusters, principal components.

Module-II

Linear Networks:- Adaline - the adaptive linear element, Linear regression. The Wiener-Hopf equation. The Least-Mean-Square (Widrow-Hoff) learning algorithm. Method of steepest descent. Adaline as a linear adaptive filter. A sequential regression algorithm.

Multi-Layer Feedforward Neural Networks:- Multi-Layer Perceptrons. Supervised Learning. Approximation and interpolation of functions. Back-Propagation Learning law. Fast training algorithms. Applications of multilayer perceptrons: Image coding, Paint-quality inspection, Nettetalk.

Module-III

Self-Organising Systems:- Unsupervised Learning, Pattern clustering, Topological mapping, Kohonen's self-organizing map, Local learning laws- Generalised Hebbian Algorithm. The Oja's and Sanger's rules. Principal component analysis - Karhunen-Loeve transform.

Module-IV

Feedback neural networks:- Pattern storage and retrieval, Hopfield model, Boltzmann machine, Recurrent neural networks.

Module-V

Radial basis function networks:- Regularization theory, RBF networks for function approximation, RBF networks for pattern classification.

Kernel methods for pattern analysis:- Statistical learning theory, Support vector machines for pattern classification, Support vector regression for function approximation, Relevance vector machines for classification and regression.

Examination Scheme:

FUZZY LOGIC

Course Code: CSE2551

Credit Units: 03

MODULE- I

Introduction: Background, Uncertainty and imprecision, Statistics and random processes, Uncertainty in information, Fuzzy sets and membership, Chance versus ambiguity, Classical sets - operations on classical sets to functions, Fuzzy sets-fuzzy set operations, Properties of fuzzy sets, sets as points in hypercube.

MODULE-II

Classical Relations And Fuzzy Relations: Cartesian product, Crisp relations-cardinality of crisp relations, Operations on crisp relations, Properties of crisp relations, Compositions, Fuzzy relations-cardinality of fuzzy relations, Operations on fuzzy relations, Properties of fuzzy relations, Fuzzy Cartesian product and composition, Non interactive fuzzy sets, Tolerance and equivalence relations-crisp equivalence relation, Crisp tolerance relation, Fuzzy tolerance, Max-min Method, other similarity methods.

MODULE-III

Membership Functions: Features of the membership function, Standards forms and boundaries, fuzzification, Membership value assignments-intuition, Inference, Rank ordering, Angular fuzzy sets.

MODULE- IV

Fuzzy-To-Crisp Conversions And Fuzzy Arithmetic: Lambda-cuts for fuzzy sets, Lambda-cuts for fuzzy relations, Defuzzification methods. Extension principle-crisp functions, Mapping and relations, Functions of fuzzy sets-extension principle, Fuzzy transform (Mapping), Fuzzy numbers Interval analysis in Arithmetic.

MODULE- V

Fuzzy Logic &Fuzzy Rule-Based Systems: Fuzzy logic, approximate reasoning, Fuzzy tautologies, Contradictions, Equivalence and logical proofs. Natural language, Linguistic hedges, Rule-based system-canonical rule forms, Decomposition of compound rules, Likelihood and truth qualification, Aggregation of fuzzy rules.

MODULE- VI

Fuzzy Decision Making, Classification & Hybrid formation: Fuzzy synthetic evaluation, Fuzzy ordering, Preference and consensus, Multiobjective decision making under fuzzy states and fuzzy actions. Classification by equivalence relations-crisp relations, Fuzzy relations cluster analysis, neuro fuzzy and fuzzy genetic system, applications to engineering problems.

INTRODUCTION TO GENETIC ALGORITHM

Course Code: CSE2651

Credit Units: 03

Module-I

Fundamentals of genetic algorithm: A brief history of evolutionary computation, biological terminology, search space encoding, reproduction elements of genetic algorithm, genetic modeling, comparison of GA and traditional search methods. The Fundamental Theorem, Schema Processing at work, Two-armed and k-armed Bandit problem, The Building block hypothesis.

Module-II

Genetic technology:- steady state algorithm, fitness scaling, inversion. Genetic programming:- Genetic Algorithm in problem solving, Implementing a Genetic Algorithm:- computer implementation, operator (reproduction, crossover and Mutation, Fitness Scaling, Coding, Discretization). Knowledge based techniques in Genetic Algorithm. Advanced operators and techniques in genetic search:- Dominance, Diploidy and Abeyance. Inversion and other reordering operators, Niche and speciation.

Module-III

Genetic Algorithm in engineering and optimization-natural evolution –Simulated annealing and Tabu search -Genetic Algorithm in scientific models and theoretical foundations.

Module-IV

Introduction to genetics - based machine learning: Classifier system, Rule and Message system, Apportionment of credit, Knowledge based Techniques, Genetic Algorithms and parallel processors.

Module-V

Applications of Genetic based machine learning-Genetic Algorithm and parallel processors- composite laminates- constraint optimization- multilevel optimization- real life problem.

Examination Scheme:

SOFT COMPUTING

Course Code: CSE2751

Credit Units: 03

Module-I

Introduction of soft computing, soft computing vs. hard computing, various types of soft computing techniques, applications of soft computing. Artificial Intelligence: Introduction, Various types of production systems, characteristics of production systems, breadth first search, depth first search techniques, other Search Techniques like hill Climbing, Best first Search, A* algorithm, AO* Algorithms and various types of control strategies. Knowledge representation issues, Propositional and predicate logic, monotonic and non monotonic reasoning, forward Reasoning, backward reasoning, Weak & Strong Slot & filler structures, NLP.

Module-II

Structure and Function of a single neuron: Biological neuron, artificial neuron, definition of ANN, Taxonomy of neural net, Difference b/w ANN and human brain, characteristic and applications of ANN, single layer network, Perceptron training algorithm, Linear separability, Delta rule. Introduction of MLP, different activation functions, Error back propagation algorithm, derivation of BBPA, momentum, limitation, characteristics and application of EBPA.

Module-III

Counter propagation network: -Architecture, functioning & characteristics of counter Propagation network, Hop field/ Recurrent network, configuration, stability constraints, associative memory, and characteristics, limitations and applications.

Module-IV

Fuzzy set theory, Fuzzy set versus crisp set, Crisp relation & fuzzy relations, Fuzzy systems: crisp logic, fuzzy logic, introduction & features of membership functions, Fuzzy rule base system : fuzzy propositions, formation, decomposition & aggregation of fuzzy Rules, fuzzy reasoning, fuzzy inference systems, fuzzy decision making.

Module-V

Genetic algorithm: Fundamental, basic concepts, working, principle, encoding, fitness function, reproduction, Genetic modeling: Inheritance operator, cross over, inversion & deletion, mutation operator, Bitwise operator, Generational Cycle, Convergence of GA, Applications & advances in GA, Differences & similarities between GA & other traditional methods.

PROJECT (ARTIFICIAL INTELLIGENCE)

Course Code: CSE2851

Credit Units: 03

Methodology

Topics of project are to be based on the latest trends in Artificial Intelligence, verifying engineering concepts in Artificial Intelligence /principals and should involve elementary research work. The projects may involve design, fabrications, testing, computer modeling, and analysis of any engineering problem. On completion of the project, the students are to present a report covering various aspects learnt by them and give a presentation on same.

Examination Scheme:

Literature study/ Fabrication/ Experimentation	40
Written Report	20
Viva	15
Presentation	25
Total	100

ASE2105	Introduction to Computers and Programming in C	L	T	P	C
Version: 2019.1	Date of Approval: May 21, 2019	2	1	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The objective of this course module is to acquaint the students with the basics of computers system, its components, data representation inside computer and to get them familiar with various important features of procedure-oriented programming language i.e. C.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of Programming through C Language
2. Provide an overview of advanced programming concepts like Structure, Union and File Handling

Course Outcomes

On completion of this course, the students will be able to

After the completion of course, the students will be able to,

- CO 1: Define the purpose and structure of C Program for programming; identify and distinguish various data types and operators; conditional and control statement; Apply if-else, Switch and loops to rewrite basic C program for problem solving.
- CO 2: Compare and contrast various Array types, its declaration and implementation; differentiate between Call by Value and Reference if Functions; apply the concepts to rewrite C Programs
- CO 3: Differentiate between various String Handling Functions; describe the concept of Pointers in C Language
- CO 4: Explain the concept of Structure and Union; apply the concept of File Handling to provide data storage support to the programs.
- CO 5: Apply the concept of Computer Graphics using C programming concepts for implementing line drawing, circle drawing algorithms.

Modules	Blooms level*	Number of hours
Module I: Introduction Introduction to computer, history, von-Neumann architecture, memory system (hierarchy, characteristics and types), H/W concepts (I/O Devices), S/W concepts (System S/W & Application S/W, utilities). Data Representation: Number systems, character representation codes, Binary, octal, hexadecimal and their interconversions. Binary arithmetic, floating point arithmetic, signed and unsigned numbers, Memory storage unit.	L1, L2 and L3	7
Module II: Programming in C History of C, Introduction of C, Basic structure of C program, Concept of variables, constants and data types in C, Operators and expressions: Introduction, arithmetic, relational, Logical, Assignment, Increment and decrement operator, Conditional, bitwise operators, Expressions, Operator precedence and associativity. Managing Input and output Operation,	L2, L3 and L4	7

Prof. (Dr.) Anil Kumar
 Deputy Dean Academics
 Amity University Haryana

Registrar
 Amity University Haryana
 Manesar Gurgaon-122413

formatting I/O.		
Module III: Fundamental Features in C C Statements, conditional executing using if, else, nesting of if, switch and break Concepts of loops, example of loops in C using for, while and do-while, continue and break. Storage types (automatic, register etc.), predefined processor, Command Line Argument.	L2, L3 and L4	7
Module IV: Arrays and Functions One dimensional arrays and example of iterative programs using arrays, 2-D arrays Use in matrix computations. Concept of Sub-programming, functions Example of user defined functions. Function prototype, Return values and their types, calling function, function argument, function with variable number of argument, recursion.	L2 and L3	7
Module V: Advanced features in C Pointers, relationship between arrays and pointers Argument passing using pointers, Array of pointers. Passing arrays as arguments. Strings and C string library. Structure and Union. Defining C structures, Giving values to members, Array of structure, Nested structure, passing strings as arguments. File Handling.	L2, L3 and L4	8

ASE2110	Programming in C Lab	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The primary objective of this course is to understand all the components of C, including the C language, the C Preprocessor, and the C Standard Library. An understanding of some advanced practical issues, including memory management, testing and debugging, complex declarations and expression evaluation, building and using libraries, and evaluating tradeoffs, such as size vs. speed and speed vs. complexity. The ability to write C code and create and manipulate logical programs.

Course Objectives

The objective of this course is to

- Equip the students with concepts of Programming through C Language
- Provide an overview of advanced programming concepts like Structure, Union and File Handling.

Course Outcomes

After the completion of course, the students will be able to,

CO 1: Demonstrate the use of various data types and operators in C programs; Solve various problems using conditional control statements (if-else, Switch case).

CO 2: Construct C programs related to problems involving the usage of loops, arrays and functions.

CO 3: Apply the concept of Pointers for efficient memory management and construct C programs using string handling functions.

CO 4: Demonstrate the use of Structure, Union and concept of File Handling to provide data storage support to the programs.

ASE2215	Workshop Technology	L	T	P	C
Version 1.1	Date of Approval: May, 2019	2	0	0	2
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

In this course the concepts of machine tool like Lathe, Shaper, Milling, and Drilling machines are discussed. Elementary concept of foundry, sheet metal and welding processes are discussed in detail. The aim of this course is to make the students familiar with the basic workshop processes.

Course Objectives

The objective of this course is to

- Equip the students with concept of machine tool, foundry, sheet metal and welding processes.
- Provide an overview of workshop technology.

Course Outcomes

On completion of this course, the students will be able to

CO1: Define the manufacturing process and engineering materials.

CO2: Explain the foundry, sheet metal and welding processes.

CO3: Demonstrate the machine tools like Lathe, Shaper, Milling, Drilling machines.

CO4: Discuss the basic elements of metal cutting and cutting parameters.

Modules	Blooms level*	Number of hours
MODULE 1: Introduction: Introduction to Manufacturing Processes and their Classification. Engineering Materials: General Properties and Applications of Engineering Materials, Plain carbon steel & classification.	L1, L2 and L3	3
MODULE 2: Foundry: Introduction to Casting Processes, Basic Steps in Casting Process, Pattern, Types of Patterns, Pattern Allowances, Moulding Sand and its composition, Sand Preparation, Molding Methods, Mould Assembly, Melting (Cupola) and Pouring, Fettling, Casting Defects and Remedies.	L1, L2 and L3	5
MODULE 3: Sheet Metal Work: Sheet Metal Operations, Measuring, Layout Marking, Shearing, Punching, Blanking, Piercing, Forming and Bending.	L1, L2 and L3	4
MODULE 4: Introduction to Machine Tools: Specifications and Uses of commonly used Machine Tools in a Workshop such as Lathe, Shaper, Milling, Drilling. Basic elements of metal cutting and cutting parameters.	L1, L2 and L3	6
MODULE 5: Welding: Introduction to Welding, Classification of Welding Processes, Gas Welding: Oxy-Acetylene Welding, Resistance Welding; Spot and Seam Welding, Arc Welding: Metal Arc, Welding Defects and Remedies.	L1, L2 and L3	6

ASE2212	ENGINEERING GRAPHICS LAB	L	T	P	C
Version 2019.1	Date of Approval: July 14, 2019	0	0	4	2
Pre-requisites/Exposure	Concepts Mathematics (especially Trigonometry and Geometry)				
Co-requisites	Machine Drawing & CAD				

Catalog Description:

A freshman level course which provides the undergraduate engineering students with a background in descriptive geometry, orthographic projection, engineering drawing standards and annotation, computer-aided engineering graphics. The concepts of point, line and plane relationships in projection, multi-view engineering drawings, auxiliary and section views, basic dimensioning and annotation, engineering applications of drawings are also discussed.

Course Objective:

The objective of this course is to

- Equip the students with the in-depth knowledge of drawings of points, straight line, planes, cylinders, prisms, pyramids, parabola, ellipse etc.
- Draw different figures manually and will be capable of using various instruments involved in drawings.

Course Outcomes (COs):

At the end of the course, the student shall be able to:

CO 1 - Define and explain basic principles of projections of points and lines.

CO 2 - Define, describe and construct the different orientations and projections of planes.

CO 3 – Explain and construct the projections of solids and sectioning of solids in different orientations.

CO 4 - State and draw the concepts of development of surfaces and introduction to auto CAD.

CO 5 – Define and construct orthographic and isometric view of an object.

Modules	Blooms level*	Number of hours
Module I: Introduction Importance, significance and scope of engineering drawing, drawing instruments and their use, lettering, dimensioning, scales, sense of proportioning, different types of projections, B.I.S. Specifications.	L1 and L2	8

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar

Manesar Gurgaon-122413

Module II: Projection of points, lines and plane surface Principal planes, principles of orthographic projections, Projection of points in all quadrants, Projection methods - First angle & third angle projection, Projections of straight lines (first angle projection) inclined to both the planes, true lengths and traces, projection of planes, projection of planes in simple position and inclined to both the principal planes, auxiliary planes and views	L1, L2 and L3	12
Module III: Projection of solids & section of solids Projection of simple solids like prisms, pyramids, cylinder, cone and truncated solids when the axis is inclined to both of the principal planes, Sectioning of above solids in simple vertical position when the cutting plane is inclined to the one of the principal planes and perpendicular to the other, obtaining true shape of section	L1, L2 and L3	12
Module IV: Development of surfaces & Isometric projections Development of surfaces of simple and sectioned solids – Prisms, pyramids cylinders and cones, Principles of isometric projection, isometric scale, Isometric projections of simple solids and truncated solids, Prisms, pyramids, cylinders, cones, Conversion of Orthographic Views to Isometric Views and Vice-versa.	L1, L2 and L3	8
Module V: Introduction to CAD Introduction to CAD and use of its commands, practice of some 2D figures using CAD.	L1, L2 and L3	8

ENGINEERING MECHANICS LAB

Course Code: ASE2218

Credit Units: 01

Engineering Mechanics:

1. To verify the law of Force Polygon
2. To verify the law of Moments using Parallel Force apparatus. (Simply supported type)
3. To determine the co-efficient of friction between wood and various surface (like
4. Leather, Wood, Aluminum) on an inclined plane.
5. To find the forces in the members of Jib Crane.
6. To determine the mechanical advantage, Velocity ratio and efficiency of a screw jack.
7. To determine the mechanical advantage, Velocity ratio and Mechanical efficiency of the
8. Wheel and Axle
9. To determine the MA, VR, η of Worm Wheel (2-start)
10. Verification of force transmitted by members of given truss.
11. To verify the law of moments using Bell crank lever
12. To find CG and moment of Inertia of an irregular body using Computation method

Pre-requisites/ Exposure	Physics, Engineering Mechanics				
Co-requisites					

Course Catalog

The objective of this course is to make the students understand the concept of stress and strain in different types of structure/machine under different loading conditions. The course also covers the simple and compound stresses due to forces, stresses and deflection in beams due to bending, torsion in circular section, strain energy, different theories of failure and stress in thin cylinder thick cylinder and spheres due to external and internal pressure.

Course Objectives

The objective of this course is to

- Equip the students with concept of stress and strain induced in material under various loading conditions.
- Provide an overview of stresses induced in beam, shaft, column and deflection of beam under various loading conditions.

Course Outcomes

On completion of this course, the students will be able to

- CO1.** Identify, explain, and apply the principles of stress and strain and relationship between elastic constant to solve complex engineering problems.
- CO2.** Identify, explain, and apply the principles of shear force and bending moment under various loads to solve complex engineering problems.
- CO3.** Identify, explain, and apply the principles of torsion and torsional stresses to solve complex engineering problems.
- CO4.** Identify, explain, and apply the methods to solve complex engineering problems related to columns and struts.
- CO5.** Identify, explain, and apply the methods to solve complex engineering problems related to slope and deflection of different bodies.

Course Content

Modules	Blooms level*	Number of hours
Module I: Simple Stresses and Strains Concept of stress and strain; Hooke's law, Young's modulus, Poisson ratio, stress at a point, stress and strains in bars subjected to axial loading. Modulus of elasticity, stress produced in compound bars subject to axial loading. Mohr Circle, problems.	L1, L2, L3	6
Module II: Shear Force and Bending Moment Definitions, Types of loads, Types of beams, Shear force and bending moment diagrams for cantilevers, simply supported beams, calculation of maximum bending moment & shear force. Bending Stress, assumptions in the simple bending theory, derivation of formula and its application to beams of rectangular, circular and channel sections, problems.	L1, L2, L3	8
Module III: Torsion Derivation of torsion equation and its assumptions. Applications of the equation for the hollow and solid circular shafts, torsional rigidity, combined	L1, L2, L3	7

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

torsion and bending of circular shafts, principal stress and maximum shear stresses under combined loading of bending and torsion, problems.		
Module IV: Columns and Struts Columns and Struts and their failure mechanism, Euler's formulas; Rankine-Gordon's formula, Johnson's empirical formula for axially loaded columns and their applications, problems.	L1, L2, L3	7
Module IV: Slope and Deflection Relationship between moment, slope and deflection, Mohr's theorem; Moment area method; method of integration; Macaulay's method: Use of all these methods to calculate slope and deflection for the following: a) Cantilevers b) Simply supported beams with or without overhang c) Under concentrated loads, uniformly distributed loads or combination of concentrated and uniformly distributed loads, problems.	L1, L2, L3	8

ASE2317	Strength of Materials Lab	L	T	P	C
Version 2019-1	Date of Approval: May 2019	0	0	2	1
Pre-requisites/ Exposure	Physics, Engineering Mechanics				
Co-requisites	Strength of Materials				

Course Catalog

The objective of the Strength of Materials lab is to demonstrate the basic principles in the area of strength and mechanics of materials and structural analysis to the undergraduate students through a series of experiments. In this lab, the experiments are performed to measure the properties of the materials such as impact strength, tensile strength, compressive strength, hardness, ductility etc.

Course Outcomes

At the end of the course, the student shall be able to:

- CO1.** Identify, explain, and demonstrate the procedure to conduct hardness tests using different testing techniques.
- CO2.** Identify, explain, and demonstrate the procedure to conduct compression and stiffness tests using different testing techniques.
- CO3.** Identify, explain, and demonstrate the procedure to conduct impact and tensile tests using different testing techniques.
- CO4.** Identify, explain, and demonstrate the procedure to conduct torsion tests and draw shear force and bending moment diagrams for bodies under different loading conditions.

Modules	Blooms level*	Number of hours
1. To study the Brinell hardness testing machine & perform the Brinell hardness test.	L1, L2, L3	2
2. To study the Rockwell hardness testing machine & perform the Rockwell hardness test.	L1, L2, L3	2
3. To study the Spring Compression Testing machine and perform the Spring Stiffness test.	L1, L2, L3	2
4. To study the Impact testing machine and perform the Impact tests (Izod & Charpy Test)	L1, L2, L3	2
5. To study the Universal Testing Machine and perform the tensile test on Universal Testing Machine.	L1, L2, L3	2
6. To perform compression & bending tests on UTM.	L1, L2, L3	2
7. To study the torsion testing machine and perform the torsion test.	L1, L2, L3	2
8. To draw shear Force, Bending Moment Diagrams for a simply Supported Beam under Point and Distributed Loads.	L1, L2, L3	2

*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation

ASE2322	Fluid Mechanics and Dynamics	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Basic Physics				
Co-requisites					

Course Catalog

This course provides the basic knowledge and understanding of the properties, types, motion and forces of fluid. A student is supposed to have a basic knowledge of physics to comprehend the contents of this course. The subject will further enhance the knowledge regarding different types of flows and their practical applications in the field of aerospace. The course also includes different fluid equations like Euler's, Bernoulli's etc. and their practical applications.

Course Objectives

The objective of this course is to

- Provide introductory knowledge to the students about different properties of fluids and equip the students with the knowledge of basic principles and laws governing the motion of fluid.
- Equip the students with knowledge and understanding of the different behaviors of flow past submerged bodies of different shapes and cross-sections.

Course Outcomes

On successful completion of this course, students will be able to

- CO1.** Identify, describe, and distinguish amongst the various types and properties of fluids, hydrostatic forces and their measurement techniques.
- CO2.** Identify, describe, and distinguish amongst the various properties of Kinematics of fluid motion and solve relevant engineering problems.
- CO3.** Identify, describe, and distinguish amongst the various properties of Dynamics of fluid motion and solve relevant engineering problems using various techniques of dimensional analysis.
- CO4.** Define, and explain various forces and moments acting on fully submerged bodies and apply the basic principles to solve relevant engineering problems.
- CO5.** Identify, describe, and distinguish between various properties of internal and external laminar and turbulent flows and solve relevant engineering problems.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Introduction to Fluid Properties and Fluid Static Physical properties of fluids, Newtonian and Non-Newtonian Fluids, Incompressible and compressible fluids. Pascal's Law, Hydrostatic law, concept of pressure and its measurement, forces on plane and curved surfaces. Buoyancy, stability of floating bodies.	L1, L2	7
Module 2: Fluid Kinematics Description of fluid flow; Lagrangian and Eulerian approach, Types of fluid flows, streamline, pathline and streakline, velocity potential and stream function. Source, sink, doublet, superimposed flow, vorticity and circulation, vortex flow, free and forced vortex.	L1, L2	8
Module 3: Fluid Dynamics and Dimensional Analysis Conservation equations, Euler's equation, Bernoulli's equation, Introduction to Navier-stokes equation, Pilot tube, Venturimeter, orificemeter, notches. Buckingham π -Theorem, Rayleigh Theorem, Types of similarity, Dimensionless numbers and their significance.	L1, L2, L3	7

Module 4: Flow past Submerged Bodies Drag and Lift, Types of drag force, Drag on various bodies, circulation and lift on cylinder and airfoil, Magnus Effect, Introduction to boundary layer, Boundary layer thickness, boundary layer separation.	L1, L2, L3	7
Module 5: Laminar and Turbulent Flow Reynolds' experiment, critical velocity, steady laminar flow through a circular tube, flow between parallel plates, Transition from laminar to turbulent flow, velocity distribution law near a solid boundary. Flow through pipes, Energy losses, minor losses in pipe lines.	L1, L2, L3	7

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

ASE2323	Fluid Mechanics and Dynamics Lab	L	T	P	C
Version 2019-1	Date of Approval: May 2019	0	0	2	1
Pre-requisites/ Exposure	Basic Physics				
Co-requisites	Fluid Mechanics and Dynamics				

Course Catalog

The objective of the Fluid Mechanics and Dynamics lab is to familiarize the students with application of basic physics of fluids, its viscosity, and its laws of conservation of energy. It provides the students with the knowledge of laboratory methods and interpretation of results with regard to fluid engineering applications such as design and operation of water, losses it goes through while energy is being transferred.

Course Objectives

- Equip the students with concepts of properties of fluid flow and fluids; energy losses calculations and its measurement through different geometric cross sections.
- Provide an outline of calculations of coefficient of discharge velocity and contraction through various flow measuring devices.

Course Outcomes

At the end of the course, the student shall be able to:

- CO1.** Describe the working, interpret, calculate, and validate the Bernoulli's experiment.
- CO2.** Describe the working of Venturimeter and Orificemeter, determine the coefficient of discharge.
- CO3.** Describe, categorize, differentiate the various major and minor losses, and calculate the losses in the pipeline structure.
- CO4.** Describe the Reynolds's experiment and metacenter. Determine the type of the flow and interpret the conditions for a body to float.
- CO5.** State the pressure measuring devices, their working and determine the viscosity of fluid with change in the temperature.

Modules	Blooms level*	Number of hours
1. Verification of Bernoulli's Theorem	L2, L4	1
2. To determine the coefficient of discharge of Venturimeter	L2, L3	2
3. To determination of coefficient of Discharge C_d , coefficient of contraction C_c and coefficient of velocity C_v of an Orificemeter	L2, L3	1
4. To find major head losses in a pipe line	L2, L3 and L4	1
5. To find minor head losses in a pipe line (sudden expansion/contraction/bend)	L2, L3 and L4	1
6. To find critical Reynold's number for a pipe flow	L2, L3	1
7. To determine the metacentric height of a floating body	L2, L3	1
8. To study pressure measuring devices	L1, L2	1
9. To determine the viscosity of the fluid with the change in the temperature	L1, L2	1
10. To determine the coefficient of discharge by falling head method	L2, L3	1

ASE2324	Aircraft Manufacturing Processes	L	T	P	C
Version 2019-1	Date of Approval: May 2019	2	0	0	2
Pre-requisites/ Exposure	Basic Physics, Chemistry, Engineering Mechanics				
Co-requisites					

Course Catalog

This course provides basic knowledge and understanding of various tools, techniques, processes, and practices utilized in manufacturing and maintenance workshops. This course also deals with various specific processes utilized in manufacturing of aircraft structure and components. Basic understanding of engineering physics and elements of mechanical engineering is prerequisite to comprehend the contents of this course.

Course Objectives

The objective of this course is to

- Provide introductory knowledge to the students regarding the basic manufacturing processes, and heat treatment techniques.
- Equip the students with knowledge of various tools, processes, and techniques used in manufacturing of aircraft and its components.

Course Outcomes

On successful completion of this course, students will be able to

- CO1.** Identify, describe and distinguish amongst the basic tools and processes used in sheet metal and wood working.
- CO2.** Identify, describe, and distinguish between various heat treatment processes and their impacts on material properties.
- CO3.** Identify, describe, and distinguish between various types of machining tool used in manufacturing and fabrication of components.
- CO4.** Identify, describe, and distinguish between various types of jigs and fixtures used in manufacturing and fabrication of aircraft components.
- CO5.** Identify, describe, and distinguish between various processes and techniques used in manufacturing and fabrication of aircraft structure and components.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Introduction Selection of materials. Importance of material processes. Manufacturing Processes. Sheet Metal working. Wood Working.	L1, L2	4
Module 2: Heat Treatment of Steels Relation between heat treatment and physical properties of steels. Critical temperatures, annealing, normalizing, tempering, case carburizing, hardening, nitriding and other surface hardening methods. Quenching. Hardness numbers, hardness testing machines.	L1, L2	6
Module 3: Machining Tools Types of lathe, lathe operations – facing, turning, threading, shapers. Types of shapers, general applications. Milling machines, types of milling machines. Work holding devices, cutter holding devices. Abrasives, bonds, grinding wheels.	L1, L2	5
Module 4: Jigs and Fixtures	L1, L2	4

ASE2412	Numerical Analysis and Programming	L	T	P	C
Version 2019-1	Date of Approval: May 2019	2	0	0	2
Pre-requisites/ Exposure	Basic Mathematics				
Co-requisites					

Course Catalog

This course deals with the techniques of numerical analysis, which gives the solution to applied problem when ordinary analytical method fails. The given techniques can be used in design of engineering and scientific problems. This course provides the basic knowledge and fundamentals related to the concepts of engineering mathematics, errors and approximation theory, interpolation, graph fitting and statistical computation.

Course Objectives

The objective of this course is to

- Provide an understanding to the students about the various numerical tools to solve problems related to formulation of algebraic equations and data interpolation.
- Equip the students with knowledge to use various numerical tools to solve problems related to calculus, differential equations, and statistics.

Course Outcomes

On completion of this course, the students will be able to

- CO1.** Identify, distinguish and apply the concept of errors, data interpretation and approximation theory to solve relevant problems.
- CO2.** Identify, distinguish the various methods of Interpolation, and apply the concept to solve realistic problems.
- CO3.** Distinguish and apply the various methods of numerical integration and differentiation to solve complex engineering problems.
- CO4.** Interpret and construct differential equations various different methods to solve complex engineering problems.
- CO5.** Identify, distinguish and apply various technical tools of curve fitting and their utilisation in engineering.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Solution of Algebraic and Transcendental Equation Error in a series approximation, Bisection Method, Iteration method, Method of false position, Newton-Raphson method. Solutions of Simultaneous equation: Gauss elimination method, Jacobi iteration method, Gauss Seidal method.	L1, L2, L3	10
Module 2: Interpolation Finite Differences, Difference tables, Polynomial Interpolation: Newton's forward and backward formula, Central Difference Formulae: Gauss forward and backward formula. Interpolation with unequal intervals: Lagrange's Interpolation, Newton Divided difference formula.	L1, L2, L3	10
Module 3: Numerical Integration and Differentiation Introduction, Numerical differentiation Numerical Integration: Trapezoidal rule, Simpson's 1/3 and 3/8 rules.	L2, L3	5
Module 4: Solution of Differential Equations Euler's Method, Runge-Kutta Methods	L2, L3, L4	3
Module 5: Statistical Computation	L1, L2,	8

ASE2416	Aircraft Propulsion	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Basic Physics, Introduction to Aerospace Engineering, Engineering Thermodynamics				
Co-requisites					

Course Catalog

This course provides basic knowledge and understanding of aerospace propulsive devices as systems, with functional requirements and environmental considerations. This course provides intermediate knowledge to the students about the design, construction, and working of different types of propulsion systems and of their components and sub-systems. Knowledge of basic physics, thermodynamics, and components of flight vehicle's power plant is crucial to comprehend the contents of this course. This course serves as a prerequisite for better understanding of advanced courses related to propulsion of flight vehicles.

Course Objectives

The objective of this course is to

1. Equip the students with basic knowledge and governing principles of jet propulsion, propulsion systems, and their components.
2. Enable students with problem solving skills related to design, construction, and performance of aircraft powerplants, their systems, and subsystems.

Course Outcomes

On successful completion of this course, students will be able to

- CO1.** Identify and explain the basic science and principles of jet propulsion and relevant performance parameters.
- CO2.** Identify, describe and compare amongst the various types of propellers and explain the mathematical theories behind the operation of propellers.
- CO3.** List, summarize and compare amongst the construction, components, and operation of various types of air-breathing engines, their systems, and subsystems and solve relevant problems.
- CO4.** List, summarize, and compare amongst the construction, components, and operation of various types of aircraft piston engines, their systems and subsystems.
- CO5.** Outline and describe different types of fuels, their characteristics, and environmental consideration associated with their use.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Introduction Basics of Jet propulsion. Classification of powerplants. Propulsive efficiency, Specific fuel consumption, Thrust and power. Factors affecting thrust and power.	L1, L2	7
Module 2: Propeller Blade Theory Ideal momentum theory and blade element theory. Selection of propellers, Types of propellers, Prop-fan, Shrouded propellers. Propeller power losses, Propeller performance parameters. Windmilling Effect.	L1, L2, L4	7
Module 3: Air-breathing Engines Gas turbine cycle. Compressor and turbine efficiencies. Compressor work and turbine work. Centrifugal and axial type of compressor and their comparative action. Combustion chambers, various arrangements and performance. Nozzles and their operation, afterburners.	L1, L2, L3, L4	6

Prof. (Dr.) Anil Kumar
Deputy Dean Academics

ASE2417	Aerospace Structures-I	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Engineering Mechanics, Strength of Materials				
Co-requisites					

Course Catalog

This course provides basic knowledge and understanding of various kinds of loads acting on aircraft structural members and their importance. This course provides knowledge and understanding to the students about the analysis of stress, strain, deflection, and torsion of a structure under varying loads using numerous methods. Knowledge of engineering mechanics and strength of materials is crucial to comprehend the contents of this course. This course serves as a prerequisite for better understanding of advanced courses related to structure of flight vehicles.

Course Objectives

The objective of this course is to

- Provide an overview of structural problems of beams and trusses which serves as benchmarks in analysis of structural members of flight vehicles.
- Enable the students to understand and utilized different theorems and principles governing the structural designing of flight vehicles.

Course Outcomes

On completion of this course, the students will be able to

- CO6.** Identify, describe, and analyze structural problems of stress and strain in Cartesian and Polar coordinates using governing equations.
- CO7.** Describe and determine the deflection and rotation of beams under different loads using various theorems.
- CO8.** Identify, describe, and determine the forces acting on statically indeterminate structures under different loads using various theorems.
- CO9.** Describe and apply the fundamental knowledge of torsion to solve relevant problems about solid bars, shells, and tubes.
- CO10.** Identify, describe and compare amongst various loads acting on structure members of an aircraft.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Analysis of 2D Problems Plane Stress and Plane Strain. Equilibrium equations, compatibility conditions, governing equations and boundary conditions. Analysis of 2D problems, Theory of Elasticity.	L1, L2, L4	6
Module 2: Structural Analysis Method Energy method, strain energy due to axial, bending and torsional loads, complimentary energy. Castigliano's theorems, Maxwell's reciprocal theorem. Unit load method. Principle of virtual work and virtual displacement. Principle of superposition.	L2, L3	6
Module 3: Statically Indeterminate Structures Statically determinate and indeterminate structures. Analysis of plane truss: Moment distribution method, Stiffness method, Flexibility method. Analysis of frames and rings.	L1, L2, L3, L4	6
Module 4: Torsion	L2, L3	6

ASE2419	Low Speed Aerodynamics Lab	L	T	P	C
Version 2019-1	Date of Approval: May 2019	0	0	2	1
Pre-requisites/ Exposure	Fluid Mechanics and Dynamics				
Co-requisites	Low Speed Aerodynamics				

Course Catalog

The objective of this course is to provide practical knowledge and understanding to the students about the aerodynamics over bodies of different cross-sections and shapes. Knowledge of fluid mechanics and basic aerodynamics is necessary to comprehend the contents of this course. This course equip the students with necessary knowledge to design and carry out experiments, gather results and interpret them in order to observe the aerodynamic behavior of bodies.

Course Objectives

The objective of this course is to

1. Equip the students with necessary practical understanding and skill to carry out experiments to visualize and observe the flow behavior over different bodies.
2. Provide practical skill and knowledge to carry out experiments using wind tunnel to gather results as per designed experiment.

Course Outcomes

On completion of this course, the students will be able to

- CO1.** Explain and demonstrate the construction and procedure of operating a wind tunnel and measurement of pressure gradient along a wind tunnel.
- CO2.** Explain and demonstrate the procedure of utilizing Pitot - static tube and anemometer for flow velocity calculations.
- CO3.** Explain and demonstrate the procedure of determining pressure distribution over bodies of different cross-sections.
- CO4.** Explain and demonstrate the procedure of utilizing Hele-shaw apparatus for flow visualization over bodies of different cross-sections.

Course Content

Modules	Blooms level*	Number of hours
Experiment 1: Wind tunnel as a tool, their classification, uses and applications.	L1, L2	2
Experiment 2: Measurement of pressure gradient along a wind tunnel	L1, L2	2
Experiment 3: Use of Pitot - static tube and Anemometer for measuring velocity	L1, L2	2
Experiment 4: Pressure distribution over a 2D cylinder	L1, L2	2
Experiment 5: Pressure distribution over an airfoil	L1, L2	2
Experiment 6: Flow visualization over flat plate	L1, L2	2
Experiment 6: Flow visualization over cylinder	L1, L2	2
Experiment 7: Flow visualization over an airfoil	L1, L2	2
Experiment 8: Experiments on potential flow Analogy (Hele-Shaw flow).	L1, L2	2

ASE2420	Aircraft Propulsion Lab	L	T	P	C
Version 2019-1	Date of Approval: May 2019	0	0	2	1
Pre-requisites/ Exposure	Introduction to Aerospace Engineering				
Co-requisites	Aircraft Propulsion				

Course Description

The objective of this course is to provide practical knowledge and understanding to the students about the various propulsion systems and subsystems used in aerospace applications. Knowledge of fluid mechanics, thermodynamics, and heat transfer is necessary to comprehend the contents of this course. This course equips the students with necessary knowledge to understand the construction and operation of propulsion systems.

Course Objectives

The objective of this course is to

1. Provide practical knowledge to the students about the various types of piston engine, their construction, and operation.
2. Provide practical knowledge to the students about the various subsystems of SI and CI engines, their construction, and operation.

Course Outcomes

On completion of this course, the students will be able to

- CO1.** List, explain, and differentiate amongst the various types of piston engines based on their construction and operation.
- CO2.** Explain and demonstrate the construction and operation of various subsystems of piston engines.
- CO3.** Explain and demonstrate the knowledge of determining different kinds of powers in a piston engine.
- CO4.** Determine and analyze the performance of nozzle and duct burner.

Course Content

Modules	Blooms level*	Number of hours
Experiment 1: To study the construction and working of CI and SI engines having various arrangements of cylinders.	L2, L3	1
Experiment 2: To study the construction and working of two-stroke and four-stroke piston engines.	L2, L3	1
Experiment 3: To study the construction and working of a carburettor.	L2, L3	1
Experiment 4: To study the components and working of the fuel system of petrol and diesel engine.	L2, L3	1
Experiment 5: To study the components and working of the ignition system of the petrol engine.	L2, L3	1
Experiment 6: To determine the valve timings for a given piston-cylinder arrangement.	L2, L3	1
Experiment 7: To determine the IHP, BHP, and FHP of a four-stroke petrol engine.	L2, L3, L4	2
Experiment 8:	L2, L3,	2

ASE2421	NUMERICAL ANALYSIS AND PROGRAMMING LAB USING MATLAB	L	T	P	C
Version		0	0	2	1
Pre-requisites/Exposure					
Co-requisites					

Catalog Description:

The purpose of this course is to provide students with the skill, knowledge and attitude required to determine approximate numerical solutions to mathematical problems which cannot always be solved by conventional analytical technique, and to demonstrate the importance of selecting the right numerical technique for a particular application, and carefully analyzing and interpreting the results obtained.

Course Objectives:

1. Demonstrate understanding of common numerical methods and how they are used to obtain approximate solutions to otherwise intractable mathematical problems.
2. Derive numerical methods for various mathematical operations and tasks, such as interpolation, differentiation, integration, the solution of linear and nonlinear equations, and the solution of differential equations.

Course Outcomes:

On completion of this course, the students will be able to

CO1: Define and describe the Algebraic and Transcendental Equation and solve the problems using appropriate Numerical methods.

CO2: Describing the interpolation methods to find intermediate values in given graphical or tabulated data.

CO3: Describe and apply Trapezoidal and Simpson's Rule to solve given integration problems.

CO4: Define and describe Runge-Kutta method and Euler's Method to solve differential equations.

CO5: Explain and describe the Statistical Computation using frequency charts, methods of least square etc.

Modules	Blooms level*	Number of hours
1. Solving Problems using <u>Newton-Raphson Method in C Programming</u>	L1,L2,L3	2
2. Solving Problems using <u>Secant Method in C Programming</u>	L1,L2,L3	2
3. Solving Problems using <u>Bisection Method in C Programming</u>	L1,L2,L3	1
4. Solving Problems using <u>Regula Falsi Method in C Programming</u>	L1,L2,L3	1
5. Solving Problems using <u>Trapezoidal Rule in C Programming</u>	L1,L2,L3	1
6. Solving Problems using <u>Simpson's 1/3rd Rule in C Programming</u>	L1,L2,L3	1
7. Solving Problems using <u>Simpson's 3/8th Rule in C Programming</u>	L1,L2,L3	1

ASE2422	Fuels and Combustion	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Introduction to Aerospace Engineering, Chemistry				
Co-requisites	Aircraft Propulsion				

Course Description

This course provides basic understanding to the students about various types of fuels used in aviation application along with an insight to their physical and chemical parameters. This course also deals with various combustion mechanisms of fuels and enable the students in understanding the need and techniques of flame stability and fuel treatment. Basic knowledge of engineering chemistry and thermodynamics is a prerequisite to comprehend the contents of this course.

Course Objectives

The objective of this course is to

1. Provide a basic understanding to the students about the various aviation fuels and their properties.
2. Equip the students with knowledge about combustion fundamentals and performance.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Identify, explain, and compare amongst the various properties of fuels.
- CO2. Identify, explain, and compare amongst the various types of alternative fuels used in aviation applications.
- CO3. Explain, describe, and compare amongst the various fundamentals of combustion and flames.
- CO4. Identify, explain and compare amongst the various fundamentals and techniques related to flame stabilization.
- CO5. List, explain, and compare amongst the various methods and processes of fuel treatments.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Fuel and its Properties. Fuels, types of fuels, relative density, molecular mass, vapor pressure, flash point, volatility point, viscosity, surface tension, freezing point, specific heat, latent heat, thermal conductivity. Combustion properties of fuels. Calorific value, enthalpy, spontaneous-ignition temperature, limits of flammability, smoke point. Pressure and temperature effects.	L1, L2	7
Module 2: Alternative Fuels for Aerospace Applications Alternative fuels, synthetic fuels, biofuels, biodiesels, alternative fuel properties. Combustion and emissions performance. Fuel preparation, fuel atomization.	L1, L2	7
Module 3: Fundamentals of Combustion Deflagration, detonation, classification of flames, physics of combustion chemistry. Flammability limits, weak mixtures, rich mixtures. Laminar and turbulent flames, Premixed and diffusion flames, flame burning velocity. Factors influencing flame propagation speed. Stoichiometric ratio, equivalence ratio. Flame propagation in heterogeneous mixtures of fuel drops, fuel vapor, and air.	L2, L4	8
Module 4: Flame Stabilization Flame stability, definition of stability performance, measurement of stability performance. Bluff-body flame holders, stabilization. Mechanisms of flame stabilization, flame stabilization in combustion chambers.	L1, L2	7

ASE2423	Control Systems	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Basics of Electrical and Electronics Engineering				
Co-requisites					

Course Description

This course provides basic understanding and knowledge to the students about various control systems and their utilization in aerospace applications. Basic knowledge of electronics is a prerequisite to comprehend the contents of this course. This course also deals with analysis and design of control systems and enables the students in understanding the application of control systems in automatic flying control of flight vehicles.

Course Objectives

The objective of this course is to

1. Provide a basic understanding to the students about the control systems and their applications.
2. Equip the students with knowledge about operation, design, and analysis of control systems.

Course Outcomes

On completion of this course, the students will be able to

- CO1.** Identify, explain, and categorize amongst the various types of control systems used in flight vehicle operation and control.
- CO2.** Explain, describe, and compare amongst the various types of open and closed loop control systems, illustrate block diagrams and signal flow graphs.
- CO3.** Explain and analyze the operation of transient and steady-state response control systems.
- CO4.** List, explain, design, and analyze different types of controllers using various approaches.
- CO5.** Describe, distinguish, and compare amongst the different types of control systems utilized in Automatic flying control systems of aircrafts.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Introduction to Control Systems History of Automatic Control. Control Engineering Practice. Simple pneumatic, hydraulic, and thermal systems. Parallel and series systems. Analogies-mechanical and electrical components. Development of flight control systems.	L1, L2, L4	7
Module 2: Open and Closed Loop Systems Concept of controls. Open-loop and closed-loop systems with examples. Concepts of feedback and basic structure of feedback control system. Laplace's transform. Block diagram, representation of block diagram, reduction block diagram. Output to input ratios, signal flow graph. Requirements of an ideal control system.	L2, L3, L4	7
Module 3: Transient and Steady-State Response Analysis Introduction. Type and order of systems, time response specifications. Transient, and steady state response. Input signals. First order system with unit step response, Second order system with unit step response for un-damped, critical damped, overdamped, and underdamped cases. Higher order system. Routh's – Hurwitz Criterion. Steady and transient state errors in unit feedback control systems.	L2, L4	8
Module 4: Control Systems Analysis and Design Introduction. Types of controllers. Root locus plot, lead and lag compensation techniques. Bode plot: concepts and construction. Lead and lag compensation technique based on the frequency-response approach.	L1, L2, L3, L4	7

ASE2424	Mechatronics	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Basics of Electrical and Electronics Engineering				
Co-requisites					

Course Description

This course represents the design of computer-controlled electromechanical system. Basic knowledge of electronics and measurements systems is a prerequisite to comprehend the contents of this course. This course enables the student to design and operate a mechatronics system after integrating the principles of mechanical, computer, electrical, and controls engineering.

Course Objectives

The objective of this course is to

1. Provide brief introduction of various components of mechatronics systems comprising electrical, mechanical and control systems along with basic knowledge of mathematical models and theories.
2. Equip the students with knowledge about different types of sensors, actuation systems and microprocessors and their applications.

Course Outcomes

On completion of this course, the students will be able to

- CO1.** List, explain, and describe different types of mechatronics systems, their components and working.
- CO2.** Describe and represent mathematical models and blocks of mechatronic systems with various system theories.
- CO3.** Identify, describe and select appropriate sensors and transducers and design an instrumentation system for collecting information about processes.
- CO4.** Describe and distinguish between Pneumatic and hydraulic actuation systems, their design and operation.
- CO5.** Identify, describe, and design the architecture and the instruction set for a microprocessor and its language programming with various types of digital and analog interfaces.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Introduction Introduction to mechatronics systems. Mechatronics in manufacturing, products, and design. Mechatronics system components. Measurement systems, control systems, electrical systems, mechanical systems.	L1, L2	6
Module 2: System Models Mathematical models. Mechanical system building blocks. Modeling dynamic systems. First order systems, second order systems.	L2, L4	6
Module 3: Transducers and Sensors Definition and classification of transducers and sensors. Principle of working and applications of light sensors, proximity sensors and Hall effect sensors. Signal conditioning, introduction to signal conditioning. Operational amplifier, protection, filtering, Wheatstone bridge. Digital signals multiplexers. Data acquisition.	L1, L2, L3	8
Module 4: Actuation Systems Introduction. Need and necessity of actuation systems. Pneumatic and hydraulic actuation systems, system components, graphic representations, symbols. Directional control valves, pressure control valves, process control valves.	L2, L3	8

ASE2510	Turbomachinery	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Engineering Thermodynamics, Aircraft Propulsion				
Co-requisites					

Course Catalog

This course provides basic knowledge and understanding of shaft power and aircraft engines components such as inlet compressor, combustion chamber and nozzles. This course focuses on educating the students about various physical laws and mathematical theories that define the flow behavior, efficiencies and losses, i.e., performance characteristics of the components based on thermodynamics and aerodynamics. Knowledge of basic physics and fluid mechanics is crucial to comprehend the contents of this course. This course serves as a prerequisite for designing of engine components.

Course Objectives

The objective of this course is to

1. Provide knowledge about the basic principles and parameters of gas turbine/Turbomachinery.
2. Educate the students about the theories and laws governing the aerodynamic and thermodynamics analysis of turbomachinery.

Course Outcomes

On completion of this course, the students will be able to

- CO6.** Identify and explain various configurations of shaft power and aircraft engines.
- CO7.** Describe and analyze various components of centrifugal compressor and also describe its performance characteristics.
- CO8.** Describe and analyze various components of axial flow compressor and also describe its performance characteristics.
- CO9.** Describe and analyze various components of axial flow turbines and also describe its performance characteristics.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Introduction Open-cycle single shaft and twin shaft arrangements, Multi spool arrangements, Closed cycles, Aircraft propulsion, Industrial applications, Marine and land transportation	L1, L2	6
Module 2: Shaft power cycles Ideal cycles, Methods of accounting components losses, Design point performance calculations, Comparative performance of practical cycles, Combined cycles and cogeneration schemes, Closed cycle gas turbines	L1, L2	8
Module 3: Centrifugal compressor Principle of operation, Work done and pressure rise, The diffuser, Non dimensional quantities for plotting compressor characteristics, compressor characteristics.	L2, L4	6
Module 4: Axial flow compressor Basic operation, Elementary theory, Factor affecting stage pressure ratio. Blockage in compressor annulus, Degree of reaction, Three dimensional Flow, Design process, Blade design, Calculations of stage performance, compressibility effects, Off design Performance, Axial compressor characteristics.	L2, L4	8
Module 5: Axial Flow turbines	L2, L4	8

ASE2511	High Speed Aerodynamics	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Low Speed Aerodynamics				
Co-requisites					

Course Catalog

Course contains the basic material essential for a foundation of compressible flow aerodynamics. The course introduces the fundamental concepts and principles of compressible flow and intends to provide the necessary background for advanced studies on the subject. The course covers the general principles and essentials of compressible flow, the flow equations, one-dimensional gas dynamics, wave motion and waves in supersonic flow, flow in ducts, small-perturbation theory. The exercises included in the course are intended to demonstrate the use of the course material and to outline additional equations and results.

Course Objectives

The objective of this course is to

1. Provide knowledge to the students about compressible flow and its applications.
2. Enable students to know about shock waves in supersonic flow and different related techniques to solve problems

Course Outcomes

On completion of this course, the students will be able to

- CO1.** Identify and explain fundamental principles of compressible flow.
- CO2.** Describe and derive wave motion and waves in supersonic flow.
- CO3.** Explain, derive, and apply various governing equations and theories of compressible flow in ducts.
- CO4.** Explain, derive, and apply governing small perturbation theory.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Compressible Aerodynamics Basic concepts of compressible flow continuity, energy and momentum equations. One dimensional inviscid flow; Stagnation quantities; Isentropic conditions. Speed of sound and Mach number; Isentropic relations; Area-velocity relation. Flow through constant area duct; Normal shock; Propagating Normal Shock. One dimensional linear and nonlinear wave motion.	L1, L2	9
Module 2: Oblique shocks and compressible Flows through ducts Oblique shock and supersonic compression by turning. Weak shocks and Mach waves; Supersonic expansion by turning. Prandtl-Meyer expansion fan; Reflection and intersection of shocks. Shock detachment and bow shock; Shock Expansion theory with application to thin airfoils. Governing equations for quasi One Dimensional Flow through converging and diverging ducts. Diffusers and supersonic Wind Tunnels.	L2, L3	9
Module 3: Subsonic compressible Flow over Airfoils, Linear Theory The derivation of velocity potential equation, Linearized velocity potential equation, Prandtl-Glauert compressibility correction, Critical Mach number, Whitcomb's area rule, Super critical airfoil.	L1, L2, L3	9
Module 4: Linearized Supersonic Flow Introduction, Derivation of Linearized supersonic Pressure Coefficient Formula, Application to supersonic Airfoils Viscous Flow Supersonic Airfoil Drag	L1, L2, L3	9

ASE2512	Aerospace Structures - II	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Mechanics of Solids, Aerospace Structures-I				
Co-requisites					

Course Catalog

Knowledge of basic mechanics and structures-I is crucial to comprehend the contents of this course. This course provides exhaustive knowledge to the students about the buckling and post buckling behavior of columns, plates and beams, which serve as a foundation for solving critical aerospace problems.

Course Objectives

The objective of this course is to

- Equip the students to understand the analytical study of the buckling behavior of columns and plates.
- Provide the knowledge to the students about the post buckling behavior of plates and field beams under tension.

Course Outcomes

On successful completion of this course, the students will be able to

- CO1.** Identify, explain, apply and analyze the fundamentals of buckling of columns and plates.
- CO2.** Identify, describe and determine the buckling of open sections.
- CO3.** Identify, explain and analyze the post buckling behavior of plates.
- CO4.** Identify, explain, apply and analyze the fundamentals of buckling of columns.
- CO5.** List and explain the different types of stress & strain measurement techniques.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Elastic Buckling of Columns Stability criteria: equilibrium approach, energy approach, imperfection approach, dynamic approach; Higher order governing equation; Large deflection of columns; Buckling of laminated composite columns; Approximate Techniques: Timoshenko's method, Rayleigh-Ritz method, Galerkin's technique; Effect of shear on buckling load; Problems.	L1, L2, L3, L4	8
Module 2: Buckling of Open Sections Torsional load –deformation characteristics; Equilibrium approach in Torsional Buckling & Torsional-Flexural Buckling; Energy Approach: Rayleigh-Ritz Method; Problems.	L1, L2	8
Module 3: Elastic Buckling of Thin Plates Introduction; Equilibrium approach; Energy Approach; Approximate Techniques: Rayleigh-Ritz method, Galerkin's Technique; Buckling of Stiffened Plates, Circular Plates & Thick Rectangular Plates; Problems.	L1, L2, L4	8
Module 4: Post-Buckling Behavior of Plates Introduction; Governing Equation; Energy Approach; Complete Tension Field Beams; Semi-Tension Field Beam; Angle of Diagonal Tension.	L1, L2, L3, L4	5
Module 5: Inelastic Buckling of Columns Double Modulus Theory; Tangent Modulus Theory; Eccentrically Loaded Columns; Empirical Relations for Short Columns.	L1, L2, L3, L4	4
Module 6: Measurement of Stress & Strain Measurement of Strain and Stress; Techniques & principles of measurement; Strain Gauges; Photoelasticity: principle, working, applications.	L1, L2	3

ASE2513	Flight Mechanics	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Introduction to Aerospace Engineering, Low Speed Aerodynamics				
Co-requisites					

Course Catalog

This course contains Fundamental characteristics of standard atmosphere which are crucial for aerodynamic characteristics of airfoil and airplane. The course is designed to make students to understand aerodynamic forces and moments in steady, accelerated flight and in maneuvers for different flight modes and conditions.

Course Objectives

The objective of this course is to

1. Provide an insight to students about the characteristics of atmosphere.
2. Equip students about different forces on airfoil and wing due to immersion in free stream of air in flight.

Course Outcomes

On completion of this course, the students will be able to

- CO1.** Define and explain parameters of International Standard Atmosphere.
- CO2.** State, explain and apply the physical principle in estimation of aerodynamic drag over flight vehicles.
- CO3.** Describe, apply and analyze the aerodynamic characteristics over airfoils and wings of flight vehicles.
- CO4.** Explain and apply the basic equations and principles to analyze the airplane mechanics in steady flight.
- CO5.** Explain and apply the basic equations and principles to analyze the airplane performance in accelerated flight and maneuvers.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Standard Atmosphere Standard atmosphere, relation between Geopotential and Geometric altitudes, pressure, temperature and density altitudes, Relation for stratosphere and troposphere, Stability of atmosphere, aero-thermodynamics, Measurement of air-speed: true airspeed, indicated airspeed and equivalent airspeed, Airspeed indicator	L1, L2	7
Module 2: Aerodynamic Drag Drag and its effects, Types of drag and affecting factors, Drag polar, Compressibility drag, Design for minimum drag, Estimation of drag of complete airplane, Terminal velocity	L1, L2, L3	7
Module 3: Aerodynamic Characteristics Force and Moments coefficients dimensional analysis, Pressure distribution over 2D airfoil, Variation with angle of attack, Center of pressure, Aerodynamic center and connected problems, Lift, Drag and moment coefficients; Relations between lift and drag, Estimation of these characteristics from measured pressure distributions, Variation of aerodynamic coefficients with Reynolds Number and Mach Number, Effect of span, Aspect ratio, plan form, sweep, taper and twist on aerodynamic characteristics of a lifting surface, Delta wing aerodynamics	L2, L3, L4	7

Prof. (Dr.) Anil Kumar
Deputy Dean Academics

ASE2514	Computer Aided Drafting Lab	L	T	P	C
Version 2019-1	Date of Approval: May 2019	0	0	2	1
Pre-requisites/ Exposure	Engineering Graphics				
Co-requisites					

Course Catalog

In this course the concept of design, drafting and modeling are discussed in details using AutoCAD software. The course contents include the basic commands, 2D and 3D modeling of machine components using AutoCAD. To master this course, students should have a background in basic knowledge of Engineering graphics and design.

Course Objectives

The objective of this course is to

- Equip the students with the concept of basic commands and features used in AutoCAD.
- Provide an overview to learn and apply the use of basic commands in generating the 2D sketches and 3D models of machine components.

Course Outcomes

On completion of this course, the students will be able to

- CO1:** Construct, edit and plot drawings using basic AutoCAD commands and features.
- CO2:** Construct and edit the model of machine components such as Piston, Connecting rod.
- CO3:** Construct and edit 2D sketches of pentagon, hexagon and any 2D drawing.
- CO4:** Construct and edit 3D model of nut, bolt and gear.
- CO5:** Construct and edit the geometry of hollow cylinder containing sphere and triangle.

Course Content

Modules	Blooms level*	Number of hours
Experiment 1: Basics of AutoCAD	L2, L3	2
Experiment 2: Modeling of machine Components such as Connecting, Rod, piston etc.	L2, L3	2
Experiment 3: 2D modeling for different Geometrics such as Hexagon, Pentagon etc	L2, L3	2
Experiment 4: 3D modeling of nut and Bolt.	L2, L3	2
Experiment 5: Modeling of Gear.	L2, L3	2
Experiment 6: Modeling of Compound Geometrics such as Hollow Cylinder containing Sphere, Triangle etc.	L2, L3	2

Version 2019-1	Date of Approval: May 2019	0	0	2	1
Pre-requisites/ Exposure	Aerospace Structures-I, Aerospace Structures-II				
Co-requisites					

Course Catalog

Knowledge of basic structures and modeling is crucial to comprehend the contents of this course. This course provides extensive knowledge to the students about various modeling and analysis tools for the designing of aircraft structures and testing them practically, leading to the development and fabrication that serve as a foundation for better and safe futuristic designs.

Course Objectives

The objective of this course is to

1. Equip the students with the practical knowledge and applications of different types of beams and columns.
2. Provide an overview to learn and apply the FEM based tool for detailed structural analysis

Course Outcomes

On completion of this course, the students will be able to

CO1: List, explain and apply the basics of FEM and structures lab.

CO2: Explain and apply the different theorems in finding loads and shear center over the given types of beams and sections.

CO3: Describe and apply the concepts of photoelasticity for visualizing the stress distribution.

CO4: Describe, apply and analyze the stress distribution using FEM based designing tool.

Course Content

Modules	Blooms level*	Number of hours
Experiment 1: Introduction to FEM & Aircraft Structures Lab	L1, L2, L3	2
Experiment 2: To Verify the following theorems for the given beams a. Maxwell's Reciprocal Theorem b. Principle of Superposition c. Castigliano's Theorem	L2, L3	2
Experiment 3: To determine the shear center for Open & Closed sections	L2, L3	2
Experiment 4: To study the Photoelasticity apparatus and visualize the stress distribution over different sample shapes.	L2, L3	2
Experiment 5: To determine the stress distribution over a circular cylinder under axial compressive and tensile load using ANSYS structural workbench.	L2, L3, L4	2
Experiment 6: To determine the stress distribution over a rectangular plate under compressive and tensile load using ANSYS structural workbench.	L2, L3, L4	2

ASE2535	Summer Internship Evaluation-I	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure					
Co-requisites					

Course Catalog

The internship experience provides the student with an opportunity to explore career interests while applying knowledge and skills learned in the classroom in a work setting. The training may undergo in an industrial environment or may be an in-house training on some latest software which is in high demand in market. The experience also helps students gain a clearer sense of what they still need to learn and provides an opportunity to build professional networks. The intern develops a greater understanding about career options while more clearly defining personal career goals. Hence, the training will be useful for their future employment in industry. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university.

Course Objectives

The objective of this course is to

1. Provide practical training on some demo or live projects that will increase the capability of the students to work in a team on actual problems in industry.
2. Provide students with capabilities to design systems, analyze results, write technical reports and engage in life-long learning practices.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Relate and apply the acquired classroom knowledge with technical, real-time industry environment.
- CO2. Relate and demonstrate capabilities to create and review technological solutions to complex engineering problems of relevant domains.
- CO3. Apply the acquired knowledge to demonstrate the skills to create and compile technical reports pertaining to a given project.
- CO4. Demonstrate the skills to work ethically and professionally in a team and engage in life-long learning.

Course Content

Guidelines

In order to achieve the objectives:

- Each student will be allotted a supervisor for proper guidance.
- Student will first submit details of company, external guide, project title to coordinator/supervisor as per given schedule.
- For internal assessment purpose, students will submit an industry feedback and a progress report.
- Student will maintain a file (Internship File/Project Report) which he/she will submit after completion of internship. Further, coordinator will provide Non-Teaching Credit Course project guidelines and sample to help in preparation of file. The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development. The file will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

The layout guidelines for the Project Report

1. File should be in the following specification

- A4 size paper

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- Spiral Binding

- **Font**

For normal text Font Type and Size must be- Times New Roman, 12 pt. The minimum font size of materials within a table or a figure can be 10 point.

- **Margins**

A margin of 3.75 cm (1½ inch) is to be given on the binding edge while on the other sides it is to be 2.5 cm (1 inch). The text of the report, including headings, figures, tables, and notes, but excluding page numbers, must be accommodated within the page area.

- **Line Spacing**

The line spacing in the main text must be between one-and-a-half (1.5). Single line spacing should be given for figure captions, table titles, figure legends, and footnotes. Equations, tables, figures, and quotations should be set off from the main text with adequate space (not less than the normal line spacing adopted for the main text). Two consecutive paragraphs should be separated by a spacing which must be larger than the line spacing adopted for the text.

- **Tables and Figures**

Each sketch, drawing, graph and photograph should have a figure number and title below the figure etc. Numbering should be sequential, chapter wise. For instance, if there are 24 figures chapter 3 spread over all of its sections the figure numbers run from Figure 3.1 through Figure 3.24. In figures experimental data should typically be represented by centered symbols, and theoretical data by continuous curves.

Each table should have a table number and caption above the table. Numbering should be sequential, chapter wise, as in the case of Figure numbers. For instance, if there are 18 tables in chapter 3 the table numbers run from Figure 3.1 through Figure 3.18.

Make sure that figures and tables are complete in other respects such as legends, references (if any) and coordinate labels with units. Each figure and table must be explicitly referred to in the text and located where its first reference occurs, preferably after the reference.

- **Drawings**

All engineering drawings must conform to relevant Standards and should include a title block. If drawings are large they should be included at the back of the report in a separate pocket. In case drawings are made using CAD packages, a CD ROM should be included which contains all the files and details of the packages used.

- **Equations**

The numbering of equations should be sequential, chapter wise. Numbered equations must be explicitly referred to in the text.

2. Report Size: The maximum number of pages of the Report should be preferably between 40-70 pages.

3. Report Layout: The report should contain the following components

- Front Page
- Declaration
- Student Certificate (University)
- Certificate(Company)
- Acknowledgement
- Abstract
- Contents
- List of Figures
- List of Tables
- Company Profile (optional)
- Chapters
- Appendices(optional)
- References / Bibliography

The above components are described below:

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- **Title Page** - Format will be given by coordinator/supervisor.
- **Declaration by the Students**-This is page number (i), the beginning of the small case Roman numeral page numbers. The student has to give a declaration to the effect that the data used for the work, the work depicted in the report, and the written material contained in the report are not copied from others and that due permission has been taken from, and due credit has been given to, the sources whenever they are used.
- **Certificate**-This is page number (ii). It is given by the Institute. The certificate will be signed by the Faculty Supervisor(s) before the viva-voce after verifying the format and by the Head of the Department after review with the Supervisor(s).
- **Company Certificate** -This is a certificate, which the company gives to the students.
- **Contents**-This is page number (iii). The table of Contents should be titled just *Contents* (not Table of Contents). Try to fit it into one or two pages.
- **Acknowledgement**-This is page number (iv). Keep this brief and avoid using informal language. This page must be signed by the candidate.
- **Abstract and Keywords**-This is page number (v). The abstract (preferably one page) should contain the context/relevance of the problem at hand, a description of what was done and a gist of the significant observations/results.
- The keywords (maximum 6) are a hint that what is contained in the report.
- **Company Profile** -A Company Profile corresponds to a file with company-specific data. Company data can be stored there and included in a booking when needed.
- **Chapters**-Introduction, Literature Review/Background Study etc. as given by coordinator/supervisor.
- **References / Bibliography**-This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

ASE2517	Aircraft Systems and Instrumentation	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Introduction to Aerospace Engineering				
Co-requisites					

Course Catalog

This course provides basic knowledge and understanding of various kinds of aircraft systems and their importance based on various aspects. Knowledge of basic physics is crucial to comprehend the contents of this course. Studying this course the students will learn about various components, systems and instruments of aircrafts that serve as a foundation for better understanding of advanced course.

Course Objectives

The objective of this course is to

1. Provide knowledge of different types of control systems used in the aircraft and their associated instruments.
2. Provide knowledge about the applications and real time problems associated with those systems.

Course Outcomes

On completion of this course, the students will be able to

- CO1.** List, explain and compare various types of flight control systems.
- CO2.** Identify and describe the engine control system with applications.
- CO3.** List and explain the hydraulic and environment control system.
- CO4.** Outline and describe about the gyroscopic systems used in aircrafts.
- CO5.** List and explain about the different types of navigational and pitot static instruments.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Flight Control Systems Primary and secondary flight control, Flight control linkage systems, push-pull control rod system, cable and pulley systems, High lift control surfaces, Flight control actuation, linear actuator, mechanical actuator, mechanical screw jack actuator, Direct drive actuation, fly-by-wire actuator, electro-hydrostatic actuator, electro-mechanical actuator	L1, L2, L4	6
Module 2: Engine Control Systems Engine technology and principle of operation, fuel flow control, air flow control, control systems, control system parameters, input signals, output signals, example systems, engine starting, fuel control, ignition control, engine rotation, throttle levers, starting sequence, engine oil systems.	L1, L2	6
Module 3: Hydraulic and Environment Control Systems Hydraulic circuit design, hydraulic actuation, hydraulic fluid, fluid pressure and temperature, fluid flow rate, hydraulic piping and pumps, need for controlled environment, heat sources, ram air cooling, fuel cooling, engine bleed, bleed flow and temperature control, air cycle refrigeration, humidity control, hypoxia, g tolerance.	L1, L2	6
Module 4: Gyroscopic Systems Gyroscope and its properties, Gyro horizon, Turn and bank indicator, turn coordinator, Direct reading magnetic compass, Directional gyros.	L1, L2	6

Prof. (Dr.) Anil Kumar

ASE2609	Aircraft Maintenance & Quality Assurance	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Introduction to Aerospace Engineering				
Co-requisites					

Course Catalog

This course provides basic knowledge and understanding of various kinds of aircraft maintenances and their importance based on various aspects. This course provides introductory knowledge to the students about testing of various components as well as the fabrication of FRPs that serve as a foundation for better understanding of advanced course.

Course Objectives

The objective of this course is to

- Provide knowledge of various types of preventive maintenance: repairs, overhauls, and calibration, rigging and testing of aircraft and its instruments and components/systems.
- Provide knowledge about the layout of aircraft structure, corrosion of aircraft components and its prevention.

Course Outcomes

On completion of this course, the students will be able to

- CO5.** Identify and explain the importance of aircraft maintenance and quality assurance.
- CO6.** List and explain various types of testings for aircraft materials using DTs and NDTs and the corrosion prevention methods.
- CO7.** Illustrate the fabrication and repair of FRP components and explain the quality assurance practices.
- CO8.** Explain and demonstrate the layout of an aircraft along with the assembly and rigging.
- CO9.** Explain and demonstrate their course knowledge to disciplinary as well as interdisciplinary audience.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Introduction to Maintenance Requirement of maintenance of aircraft, its components, systems, subsystems. Types of maintenance scheduling, Inspection of aircraft components. Types of Inspections, Repair, Modifications, and Reconditioning. Role of airworthiness, Issue of C of A.	L1, L2	6
Module 2: Testing of Aircraft Materials and Components Testing techniques for Tension, Hardness, Bending, Impact, Crushing, Torsion, Fatigue, Hydrostatic tests. NDT Techniques: X-ray, Gamma Ray, Ultra-sonic; Magna-flux.	L1, L2	6
Module 3: Layout of Aircraft Structure Principle and important sub-groups, Aircraft Station numbering sub-assemblies in airframe, landing gear, Power plant and its attachment, Rotorcraft Structure.	L1, L2	6
Module 4: Aircraft Assembly and Rigging Aircraft Assembly, Rigging, Alignment of fixed surfaces and flight controls and systems in details, balancing, Inspection and Maintenance. Flight control system of Helicopter.	L1, L2	6

ASE2613	Computational Fluid Dynamics	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Fluid Mechanics and Dynamics, Flight Dynamics				
Co-requisites					

Course Catalog

This course introduces the beginning graduate and advanced undergraduate students to finite difference methods as a means of solving different type of differential equations that arise in fluid dynamics. Fundamentals of numerical analysis, ordinary differential equations and partial differential equations related to fluid mechanics and heat transfer will be reviewed. Error control and stability considerations are discussed and demonstrated. The Navier-Stokes equations will be solved using a commercial software.

Course Objectives

The objective of this course is to

- Provide introductory knowledge to the students about a variety of computational techniques that can be used for solving engineering problems.
- Provide education to the students about utilizing the computational software for result presentations and data visualization of engineering problems.

Course Outcomes

On completion of this course, the students will be able to

- CO1.** Describe, and apply the various governing equations to solve engineering problems.
- CO2.** Describe, and apply various mathematical approaches to solve partial differential equations.
- CO3.** Describe, and apply the fundamental knowledge and various techniques to create computational grids.
- CO4.** Describe, and apply the fundamental knowledge and various techniques to discretize computational grids.
- CO5.** Describe, and apply the knowledge and technique of finite volume method to achieve numerical solution of problems.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Introduction Governing Equations of Fluid Dynamics: Continuity, Momentum and Energy Equations; Derivation in Various Forms; Integral Versus Differential Form of Equations; Models of Flows; Substantial Derivative; Divergence of Velocity; Physical Boundary Conditions.	L2, L3	6
Module 2: Mathematical Behaviour of Partial Differential Equations Classification of Partial Differential Equations; Cramer Rule and Eigen Value Methods for Classification; Hyperbolic, Parabolic, and Elliptic Forms of Equations.	L2, L3	5
Module 3: Grid Generation and Techniques Need for Grid Generation; General Transformation of The Equations; Metrics and Jacobians; Structured Grids-Essential Features; Structured Grid Generation Techniques - Algebraic and Numerical Methods; Unstructured Grids-Essential Features; Unstructured Grid Generation Techniques- Delaunay-Voronoi Diagram; Advancing Front Method. Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Introduction to Aerospace Engineering, Aerospace Structures-I				
Co-requisites					

Course Catalog

This course provides basic knowledge and understanding of various types of materials, their properties and their applications in aerospace. This course serves as a foundation for better understanding of advanced courses relevant to aircraft manufacturing, aircraft design, construction and fabrication.

Course Objectives

The objective of this course is to

1. Provide strong knowledge base to students in respect of various important aerospace materials used in the manufacture of aircraft.
2. Provide introductory knowledge base to students regarding different types of alloys, their heat treatment processes and applications.

Course Outcomes

On completion of this course, the students will be able to

- CO1.** Identify and explain the fundamental of materials and their importance on flight vehicle.
- CO2.** Identify, explain and compare the properties of various aluminum and magnesium alloys and steel compositions. Also their application to aerospace vehicle vehicles.
- CO3.** Identify, describe and compare the properties of high strength and high resistance alloys along with their application to aerospace vehicle vehicles.
- CO4.** Identify and explain the corrosion and its different prevention methods for preventing aircraft components.
- CO5.** Identify and explain about the composite materials, their applications and different types.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Introduction To Materials Properties of flight vehicle materials, Importance of strength/weight ratio of materials for Aerospace Vehicles, Importance of temperature variations, factors affecting choice of material for different parts of airplane.	L1, L2	6
Module 2: Aluminium & Magnesium Alloys Aluminium alloys, Heat treatment, High strength and high corrosion resistant alloys, Magnesium alloys and their properties, Heat treatment. Application to Aerospace Vehicle of these alloys.	L1, L2, L4	6
Module 3: Aircraft Steels Classification of alloy steels, Effect of alloying elements, Carbon steels v/s Alloys steels, corrosion resistant steels, Heat treatment, Corrosion prevention methods, Selection and application of steel alloys to aircraft manufacture.	L1, L2, L4	6
Module 4: High Strength And Heat Resistant Alloys Classification of heat resistant materials and iron, Nickel and cobalt base alloys, Refractory materials: Ceramics, Titanium and its alloys, properties of Inconel, Monal and K-Monal, Nimonic and super alloys: Application to Aerospace vehicles.	L1, L2	6

ASE2651	Aircraft Stability and Control	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Introduction to Aerospace Engineering, Low Speed Aerodynamics, Flight Mechanics				
Co-requisites					

Course Catalog

This course provides the fundamental knowledge of stability and control of an aircraft. Students will understand the importance of different components of an aircraft in providing stability and giving control to aircraft motion. This course also provides understanding of mathematics behind the designing of aircraft and its components. The content of this course serves as a foundation for advance course of aircraft designing.

Course Objectives

The objective of this course is to

1. Provide understanding of various aspects of stability of an aircraft in flight and how geometric features of control surfaces and their proper angular movements achieve it.
2. Provide an analytical understanding of longitudinal, lateral and directional stability and measures that can be taken to control the same.

Course Outcomes

On completion of this course, the students will be able to

- CO1.** Define, explain, apply and compare the various fundamentals and aspects of stick fixed static longitudinal stability.
- CO2.** Define, explain, apply and compare the various fundamentals and aspects of stick free static longitudinal stability.
- CO3.** Define, explain, apply and compare the various fundamentals and aspects of directional stability and control of flight vehicles.
- CO4.** Define, explain, apply and compare the various fundamentals and aspects of lateral stability and control of flight vehicles.
- CO5.** Define, explain, apply and compare the various fundamentals and aspects of dynamic stability of flight vehicles.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Stick Fixed Static Longitudinal Stability Introduction to stability of airplane, stick fixed longitudinal stability, Neutral point, Centre of gravity limits, In flight measurement of stick fixed neutral point	L1, L2, L3, L4	8
Module 2: Stick Free Static Longitudinal Stability Control surface hinge moments, floating and restoring tendencies, the tab, Effect of free elevator on airplane stability, Elevator Control force, stick force gradients, Neutral point, Controls free center of gravity limit, In-flight measurement of stick free neutral point	L1, L2, L3, L4	7
Module 3: Directional Stability and Control Asymmetric flight, Feather cock stability, contribution of different parts of Airplane, Rudder Fixed and Rudder free static directional stability, rudder lock	L1, L2, L3, L4	7
Module 4: Lateral Stability and Control Dihedral Effect, Contribution of different parts of airplane controls in roll, aileron control power, cross coupling of lateral and directional effects	L1, L2, L3, L4	7

ASE2612	Computational Fluid Dynamics Lab	L	T	P	C
Version 2019-1	Date of Approval: May 2019	0	0	2	1
Pre-requisites/ Exposure	Fluid Mechanics and Dynamics, Low Speed Aerodynamics, CAD				
Co-requisites	Computational Fluid Dynamics				

Course Description

The objective of this course is to provide knowledge and understanding to the students about the modeling, meshing and simulation of flow over aircraft and its components. Knowledge of Fluid Mechanics and Dynamics, Low Speed Aerodynamics, Computer Aided drafting is necessary to comprehend the contents of this course. This course equips the students with various approaches and tools of modeling and grid generations, also a brief knowledge is provided to the students about the numerical methods to solve numerous problems related to aerospace and mechanical systems.

Course Objectives

The objective of this course is to

1. Provide experience in computing aerodynamic problems and understanding flow physics over flat plate, pipe, cylinder, over a wedge and flow over an airfoil.
2. Provide knowledge to estimate flow characteristics with different Mach numbers to determining the pressure coefficients over different structural objects.

Course Outcomes

On completion of this course, the students will be able to

- CO5.** Describe and apply the engineering fundamentals and principles to model flat plate, pipe, cylinder, wedge, Nozzle, airfoil and wing in ANSYS Workbench/ AutoCAD.
- CO6.** Describe and apply the engineering fundamentals and principles to generate different types of grids with varying qualities, arrangement of nodes and topology.
- CO7.** Describe and apply the engineering fundamentals and principles to simulate the flow with varying parameters over the object with different numerical methods.
- CO8.** Compare and analyze the results of flow simulation to achieve an optimum design of the structure.

Course Content

Modules	Blooms level*	Number of hours
Experiment 1: Introduction to ANSYS	L1, L2,	1
Experiment 2: To simulate and analyze the flow over a flat plate	L1, L2, L3, L4	1
Experiment 3: To simulate and analyze the flow through a pipe	L1, L2, L3, L4	1
Experiment 4: To simulate and analyze the flow over a circular cylinder	L1, L2, L3, L4	1
Experiment 5: To simulate and analyze the flow over a wedge	L1, L2, L3, L4	1
Experiment 6: To simulate and analyze the subsonic flow through a nozzle	L1, L2, L3, L4	1
Experiment 7: To simulate and analyze the supersonic flow through a nozzle	L1, L2, L3, L4	1
Experiment 8: To simulate and analyze the flow over a symmetric aerofoil	L1, L2, L3, L4	1
Experiment 9:	L1, L2,	2

ASE2615	Aeromodelling Lab	L	T	P	C
Version 2019-1	Date of Approval: May 2019	0	0	2	1
Pre-requisites/ Exposure	Introduction to Aerospace Engineering, Low Speed Aerodynamics, Aircraft Propulsion				
Co-requisites					

Course Description

The objective of this course is to provide practical knowledge and understanding to the students about the design and fabrication of models and prototypes of aircraft. Knowledge of Introduction to Aerospace Engineering, Low Speed Aerodynamics, Aircraft Propulsion, and Aircraft Structures is necessary to comprehend the contents of this course. This course equips the students with necessary knowledge to understand the construction and operation of model and prototype flight vehicles.

Course Objectives

The objective of this course is to

- Provide practical knowledge to the students about the design of model and prototypes of flight vehicles.
- Provide practical knowledge to the students about the fabrication and operation of model and prototypes of flight vehicles.

Course Outcomes

On completion of this course, the students will be able to

- CO1.** Explain and apply the engineering fundamentals and principles to design and create various types airfoils and wing planforms using basic construction materials.
- CO2.** Explain and apply the engineering fundamentals and principles to design and create unpowered and powered gliders using basic construction materials.
- CO3.** Explain and apply the engineering fundamentals and principles to design and create radio-controlled flight vehicles.

Course Content

Modules	Blooms level*	Number of hours
Experiment 1: To design and fabricate various types of airfoils using basic raw materials (Thermocol, Balsa wood, Cardboard, etc.).	L2, L3, L5	2
Experiment 2: To design and fabricate various types of wing planforms using basic raw materials (Thermocol, Balsa wood, Cardboard, etc.).	L2, L3, L5	2
Experiment 3: To perform design calculations and fabrication of an unpowered glider aircraft.	L2, L3, L5	2
Experiment 4: To perform design calculations and fabrication of a powered glider aircraft.	L2, L3, L5	2
Experiment 5: To perform design calculations of a small-scale, radio-controlled, fixed-wing flight vehicle.	L2, L3, L5	2
Experiment 6: To fabricate and test a small-scale, radio-controlled, fixed-wing flight vehicle.	L2, L3, L5	2

ASE2637	Minor Project	L	T	P	C
Version 2019-1	Date of Approval: May 2019	2	0	0	2
Pre-requisites/ Exposure					
Co-requisites					

Course Catalog

The minor project provides the student with an opportunity to apply knowledge and skills learned in the classroom in carrying out a project. The minor project is an in-house training on real-time project or on latest software. The experience and skills that come with carrying out minor project build a foundation and aptitude in students to conduct meaningful research towards a practical outcome. The minor project aims to impart necessary training to the students that is a value addition for their employability.

Course Objectives

The objective of this course is to

1. Provide practical training on small-scale projects that will increase the capability of the students to work individually or in teams on actual problems in industry.
2. Provide students with capabilities to design systems, analyze results, write technical reports and engage in life-long learning practices.

Course Outcomes

On completion of this course, the students will be able to

- CO1.** Relate and apply the acquired classroom knowledge with technical and real-time environment.
- CO2.** Relate and demonstrate capabilities to create and review technological solutions to complex engineering problems of relevant domains.
- CO3.** Apply the acquired knowledge to demonstrate the skills to create and compile technical reports pertaining to a given project.
- CO4.** Demonstrate the skills to work ethically and professionally in a team and engage in life-long learning.

Course Content

Guidelines

In order to achieve the objectives:

- Each student will be allotted a supervisor for proper guidance.
- Student will first submit details of company, external guide, project title to coordinator/supervisor as per given schedule.
- For internal assessment purpose, students will submit an industry feedback and a progress report.
- Student will maintain a file (Internship File/Project Report) which he/she will submit after completion of internship. Further, coordinator will provide Non-Teaching Credit Course project guidelines and sample to help in preparation of file. The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development. The file will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

The **layout guidelines** for the Project Report

1. File should be in the following specification

- A4 size paper
- Spiral Binding
- **Font**

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

For normal text Font Type and Size must be- Times New Roman, 12 pt. The minimum font size of materials within a table or a figure can be 10 point.

- **Margins**

A margin of 3.75 cm (1½ inch) is to be given on the binding edge while on the other sides it is to be 2.5 cm (1 inch). The text of the report, including headings, figures, tables, and notes, but excluding page numbers, must be accommodated within the page area.

- **Line Spacing**

The line spacing in the main text must be between one-and-a-half (1.5). Single line spacing should be given for figure captions, table titles, figure legends, and footnotes. Equations, tables, figures, and quotations should be set off from the main text with adequate space (not less than the normal line spacing adopted for the main text). Two consecutive paragraphs should be separated by a spacing which must be larger than the line spacing adopted for the text.

- **Tables and Figures**

Each sketch, drawing, graph and photograph should have a figure number and title below the figure etc. Numbering should be sequential, chapter wise. For instance, if there are 24 figures chapter 3 spread over all of its sections the figure numbers run from Figure 3.1 through Figure 3.24. In figures experimental data should typically be represented by centered symbols, and theoretical data by continuous curves.

Each table should have a table number and caption above the table. Numbering should be sequential, chapter wise, as in the case of Figure numbers. For instance, if there are 18 tables in chapter 3 the table numbers run from Figure 3.1 through Figure 3.18.

Make sure that figures and tables are complete in other respects such as legends, references (if any) and coordinate labels with units. Each figure and table must be explicitly referred to in the text and located where its first reference occurs, preferably after the reference.

- **Drawings**

All engineering drawings must conform to relevant Standards and should include a title block. If drawings are large they should be included at the back of the report in a separate pocket. In case drawings are made using CAD packages, a CD ROM should be included which contains all the files and details of the packages used.

- **Equations**

The numbering of equations should be sequential, chapter wise. Numbered equations must be explicitly referred to in the text.

2. Report Size: The maximum number of pages of the Report should be preferably between 40-70 pages.

3. Report Layout: The report should contain the following components

- Front Page
- Declaration
- Student Certificate (University)
- Certificate(Company)
- Acknowledgement
- Abstract
- Contents
- List of Figures
- List of Tables
- Company Profile (optional)
- Chapters
- Appendices(optional)
- References / Bibliography

The above components are described below:

- **Title Page** - Format will be given by coordinator/supervisor.

- **Declaration by the Students** - This is page number (i), the beginning of the small case Roman numeral page numbers. The student has to give a declaration to the effect that the data used for the work, the work depicted in the report, and the written material contained in the report are not copied from others and that due permission has been taken from, and due credit has been given to, the sources whenever they are used.
- **Certificate** - This is page number (ii). It is given by the Institute. The certificate will be signed by the Faculty Supervisor(s) before the viva-voce after verifying the format and by the Head of the Department after review with the Supervisor(s).
- **Company Certificate** - This is a certificate, which the company gives to the students.
- **Contents** - This is page number (iii). The table of Contents should be titled just *Contents* (not Table of Contents). Try to fit it into one or two pages.
- **Acknowledgement** - This is page number (iv). Keep this brief and avoid using informal language. This page must be signed by the candidate.
- **Abstract and Keywords** - This is page number (v). The abstract (preferably one page) should contain the context/relevance of the problem at hand, a description of what was done and a gist of the significant observations/results.
- The keywords (maximum 6) are a hint that what is contained in the report.
- **Company Profile** - A Company Profile corresponds to a file with company-specific data. Company data can be stored there and included in a booking when needed.
- **Chapters** - Introduction, Literature Review/Background Study etc. as given by coordinator/supervisor.
- **References / Bibliography** - This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

ASE2618	Finite Element Method	L	T	P	C
Version 2019-1	Date of Approval: May 2019	2	0	0	2
Pre-requisites/ Exposure	Engineering Thermodynamics, Aircraft Propulsion				
Co-requisites					

Course Catalog

This course provides basic knowledge and understanding of various kinds of aircraft maintenances and their importance based on various aspects. This course provides introductory knowledge to the students about testing of various components as well as the fabrication of FRPs that serve as a foundation for better understanding of advanced course.

Course Objectives

The objective of this course is to

1. Provide knowledge of various concepts of Mathematical Modeling of Engineering Problems.
2. Provide knowledge about the basics of the Finite Element Technique, a numerical tool for the solution of different classes of problems in solid mechanics.

Course Outcomes

On completion of this course, the students will be able to

- CO1.** Identify and explain the basics of finite elements analysis.
- CO2.** Summarize and explain various types of techniques used in the formulation of finite elements methods.
- CO3.** List, identify and describe the different elemental properties along with their applications in the FEM of plates and shells.
- CO4.** List, explain and apply the gained knowledge in related FEM domains.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Introduction to Finite Element Analysis Introduction; Basic Concepts of Finite Element Analysis; Introduction to Elasticity; Steps in Finite Element Analysis	L1, L2	4
Module 2: Finite Element Formulation Techniques Virtual Work and Variational Principle; Galerkin Method; Finite Element Method: Displacement Approach; Stiffness Matrix and Boundary Conditions	L1, L2	4
Module 3: Element Properties Natural Coordinates; Triangular Elements; Rectangular Elements; Lagrange and Serendipity Elements; Solid Elements; Isoparametric Formulation;	L1, L2	6
Module 4: FEM for Plates and Shells Introduction to Plate Bending Problems; Finite Element Analysis of Thin Plate ; Finite Element Analysis of Thick Plate; Finite Element Analysis of Skew Plate ;	L1, L2	6
Module 5: Additional Applications of FEM Finite Elements for Elastic Stability; Finite Elements in Fluid Mechanics; Dynamic Analysis	L1, L2, L3	4

ASE2702	Flight Dynamics	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Basic Mathematics, Low Speed Aerodynamics, Flight Mechanics,				
Co-requisites					

Course Catalog

This course contains Fundamental mathematical and dynamic principles for flight dynamics. The course also provides basic knowledge and understanding of use of general equations for unsteady motion of airplane, such as force equations, momentum equations and principle of rotation. It also provides basic knowledge of small disturbance theory for aircraft stability and control.

Course Objectives

The objective of this course is to

- Equip students to understand the complexities of airplane and rocket dynamics
- Equip the students about the degrees of freedom of flight trajectory and analysis of stability and control based on small disturbance theory and stability derivatives for airplane and rockets.

Course Outcomes

On completion of this course, the students will be able to

- CO10.** Define and explain particle and rigid body kinematics for different system of frames and use of co-ordinate transformation.
- CO11.** Define, explain and apply the equations of motion of aircraft and flight simulation of powered and unpowered flight.
- CO12.** Describe, apply and analyze small disturbance theory for stability and control.
- CO13.** Describe, apply and analyze Physical significance of stability derivatives and their use.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Introduction Overview; Fundamental of Vectors; Fixed and Inertial frame of reference, Earth as a flat surface, Coriolis Effect, Longitudinal, Directional and Lateral forces and moments; Longitudinal, Directional and Lateral Stability.	L1, L2	6
Module 2: Transformation Coordinate Systems; Transformation from Cartesian to Cylindrical and Cylindrical to Spherical Coordinate Systems; Transformation Matrix about X, Y And Z Axis; Rotation Matrix about X, Y And Z Axis; Earth, Body, Wind and Stability Axis Systems and their Transformation.	L1, L2	6
Module 3: Aircraft Equations of Motion Force equations in moving frame, Moment equations in moving frame, Orientation and position of the airplane: Principle Rotation, Euler angles, Euler rates, Transformation matrix, External forces, Angular velocities equations in moving frame	L1, L2, L3	8
Module 4: Small Disturbance Theory Introduction; Assumptions, Linearized equations of aircraft motion: Control fixed longitudinal directional equations, control fixed lateral directional equations, Stability analysis of linearized equations of motion	L1, L3, L4	8
Module 5: Stability Derivatives Introduction, Expressions for C_x , and C_z . The α Derivatives:	L1, L3, L4	8

ASE2709	Aircraft Design	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Basic Mathematics, Low Speed Aerodynamics, Flight Mechanics				
Co-requisites					

Course Catalog

This course provides basic knowledge and understanding of various aspects and processes of aircraft design. This course provides in-depth knowledge to the students about flow process of carrying out the designing of aircraft, its associated loads and the safety requirements. Based on this course, students will be able to investigate new and emerging design aspects

Course Objectives

The objective of this course is to

- Provide introductory knowledge to the students regarding the fundamentals of aircraft designing and its structural analysis
- Provide education to the students about the concepts of different structural members and various associated loads

Course Outcomes

On successful completion of this course, the students will be able to

- CO1.** List and describe the basics of aircraft system design and aircraft structures
- CO2.** Identify, explain and analyze the applicability of design aspects and different aircraft loads.
- CO3.** Identify and explain the design considerations of wings and high lift devices.
- CO4.** Identify, correlate and apply the numerical and theoretical knowledge to investigate new and emerging design aspects

Course Content

Modules	Blooms level*	Number of hours
Module 1: Introduction Aircraft design, requirements and specifications, Different design phases, Importance of each phase. Weight, its importance. Aerodynamic and structural design considerations. Classifications of airplane.	L1, L2	8
Module 2: Air Loads during Flight Ground Loads, Airframe loads, maneuvering loads in flight, Load factor, V-n diagram, gust loads, and estimation of gust loads.	L1, L2	6
Module 3: Wing Design Consideration Selection of airfoil and planform. Span wise air loads variation, BMD and SFD. Weight distribution.	L1, L2, L4	8
Module 4: High Lift Systems Airfoil's maximum lift coefficient, leading and trailing edge devices, effect of sweep back. Stall and the deep stall. Effect of Re, V/STOL configurations.	L1, L2	7
Module 5: Conceptual Design of Airplane & Layout Preparation of 3-views and layout. Estimation of take-off, landing, climbing and cruise performance. Flight envelope.	L1, L2, L3	7

*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation

ASE2713	Vibration Engineering	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Engineering Mechanics				
Co-requisites					

Course Catalog

This subject will cover the fundamental concepts on the vibration of mechanical systems of one degree freedom, Lagrange's equations of motion and multiple degree of freedom systems. This course includes introduction to matrix methods, influence coefficient, forced vibration, principle mode of vibration, Rayleigh method, measuring instruments, isolation, torsional systems and balancing of machine.

Course Objectives

The objective of this course is to

1. Provide adequate knowledge to analyse one-degree and multi-degree of freedom systems of vibrations using different methods.
2. Find out natural frequencies and amplitude responses of different systems.

Course Outcomes

On completion of this course, the students will be able to

- CO1:** Explain, determine and apply the equation of motions for free vibration under damped and undamped condition for one degree freedom system.
- CO2:** Explain, determine and apply the equation of motion for forced vibration due to excitation of support.
- CO3:** Determine and apply the equation of motion in reciprocating and rotary balancing of machine and explain the vibration isolation.
- CO4:** Explain, determine and apply the equation of motion for two degree of freedom system and explain vibration absorber
- CO5:** Derive and apply the principle mode of vibration by matrix iteration, influence coefficient and solve the problem free and forced vibration having multi degree of freedom systems.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Scope of Vibration Important terminology and classification, Degrees of freedom, Harmonic motion, vectorial representation, complex number representation, addition, Derivation of equation of motion for one dimensional longitudinal, transverse and torsional vibrations without damping using Newton's second law, D' Alembert's principle and Principle of conservation of energy, Compound pendulum and centre of percussion, Damped vibrations of single degree of freedom systems, Viscous damping, underdamped, critically damped and overdamped systems, Logarithmic decrement, Vibration characteristics of Coulomb damped and Hysteretic damped systems.	L1, L2, L3	6
Module 2: Forced Vibrations of Single Degree of Freedom Systems Forced vibration with constant harmonic excitation, Steady state and transient parts, Frequency response curves and phase angle plot, Forced vibration due to excitation of support.	L1, L2, L3	8
Module 3: Vibration Isolation and Transmissibility Force transmissibility, Motion transmissibility, Forced vibration with rotating	L1, L2, L3	6

ASE2714	Vibration Engineering Lab	L	T	P	C
Version 2019-1	Date of Approval: May 2019	0	0	2	1
Pre-requisites/ Exposure	Engineering Mechanics				
Co-requisites	Vibrations Engineering				

Course Catalog

The vibration engineering lab will cover the fundamental concepts on the vibration of mechanical systems of free vibration of simple and compound pendulum and Torsional vibration of rotor. An Interpretation of results is to find out the natural frequency of different mechanical systems.

Course Objectives

The objective of this course is to

1. Provide adequate knowledge to analyses one-degree and multi-degree of freedom systems of vibrations using different methods.
2. Find out natural frequencies and amplitude responses of different systems.

Course outcomes

On completion of this course, the students will be able to

- CO1:** Explain and apply the natural frequency of simple pendulum, compound pendulum and bifilar suspension.
- CO2:** Explain and apply the equation of motion of torsional vibration and determine the damping coefficient of free vibration.
- CO3:** Explain and apply the equation of motion of longitudinal vibration and determine the natural frequency of spring mass system.
- CO4:** Explain and apply the Dunkerley's rule and determine the natural frequency of beam.
- CO5:** Determine and apply the principle mode of vibration of shaft with different end conditions.

Course Content

Experiment	Blooms level*	Number of hours
1. To verify the relation $T = 2\pi \sqrt{\frac{L}{g}}$ for a simple pendulum.	L2, L3	1
2. To determine the radius of gyration 'k' of compound pendulum and verify the relation $T = 2\pi \sqrt{\frac{k^2 + og^2}{g(og)}}$	L2, L3	1
3. To determine the radius of gyration of bar using Bi-filar suspension.	L2, L3	1
4. To study the torsional vibration (undamped) of single rotor shaft system	L2, L3	1
5. To study the damped torsional oscillations and determine the damping coefficient	L2, L3	1
6. To study the longitudinal vibration of spring and to determine the frequency theoretically and actually by experiment	L2, L3	1
7. To study the undamped free vibration of equivalent spring mass system.	L2, L3	1
8. To verify the Dunkerley's rule on simply supported beam and compare it with actually by experiment.	L2, L3	1
9. To study the forced lateral vibration of the beam for different damping	L2, L3	1
10. To determine experimentally the whirling speed of shaft for a given system.	L2, L3	1
11. Harmonic excitation of cantilever beam using electro-dynamics shaker	L2, L3	2

ASE2735	Summer Internship Evaluation-II	L	T	P	C
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure					
Co-requisites					

Course Catalog

The internship experience provides the student with an opportunity to explore career interests while applying knowledge and skills learned in the classroom in a work setting. The training may undergo in an industrial environment or may be an in-house training on some latest software which is in high demand in market. The experience also helps students gain a clearer sense of what they still need to learn and provides an opportunity to build professional networks. The intern develops a greater understanding about career options while more clearly defining personal career goals. Hence, the training will be useful for their future employment in industry. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university.

Course Objectives

The objective of this course is to

1. Provide practical training on some demo or live projects that will increase the capability of the students to work in a team on actual problems in industry.
2. Provide students with capabilities to design systems, analyze results, write technical reports and engage in life-long learning practices.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Relate and apply the acquired classroom knowledge with technical, real-time industry environment.
- CO2. Relate and demonstrate capabilities to create and review technological solutions to complex engineering problems of relevant domains.
- CO3. Apply the acquired knowledge to demonstrate the skills to create and compile technical reports pertaining to a given project.
- CO4. Demonstrate the skills to work ethically and professionally in a team and engage in life-long learning.

Course Content

Guidelines

In order to achieve the objectives:

- Each student will be allotted a supervisor for proper guidance.
- Student will first submit details of company, external guide, project title to coordinator/supervisor as per given schedule.
- For internal assessment purpose, students will submit an industry feedback and a progress report.
- Student will maintain a file (Internship File/Project Report) which he/she will submit after completion of internship. Further, coordinator will provide Non-Teaching Credit Course project guidelines and sample to help in preparation of file. The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development. The file will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

The layout guidelines for the Project Report

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

1. File should be in the following specification

- A4 size paper
- Spiral Binding

• Font

For normal text Font Type and Size must be- Times New Roman, 12 pt. The minimum font size of materials within a table or a figure can be 10 point.

• Margins

A margin of 3.75 cm (1½ inch) is to be given on the binding edge while on the other sides it is to be 2.5 cm (1 inch). The text of the report, including headings, figures, tables, and notes, but excluding page numbers, must be accommodated within the page area.

• Line Spacing

The line spacing in the main text must be between one-and-a-half (1.5). Single line spacing should be given for figure captions, table titles, figure legends, and footnotes. Equations, tables, figures, and quotations should be set off from the main text with adequate space (not less than the normal line spacing adopted for the main text). Two consecutive paragraphs should be separated by a spacing which must be larger than the line spacing adopted for the text.

• Tables and Figures

Each sketch, drawing, graph and photograph should have a figure number and title below the figure etc. Numbering should be sequential, chapter wise. For instance, if there are 24 figures chapter 3 spread over all of its sections the figure numbers run from Figure 3.1 through Figure 3.24. In figures experimental data should typically be represented by centered symbols, and theoretical data by continuous curves.

Each table should have a table number and caption above the table. Numbering should be sequential, chapter wise, as in the case of Figure numbers. For instance, if there are 18 tables in chapter 3 the table numbers run from Figure 3.1 through Figure 3.18.

Make sure that figures and tables are complete in other respects such as legends, references (if any) and coordinate labels with units. Each figure and table must be explicitly referred to in the text and located where its first reference occurs, preferably after the reference.

• Drawings

All engineering drawings must conform to relevant Standards and should include a title block. If drawings are large they should be included at the back of the report in a separate pocket. In case drawings are made using CAD packages, a CD ROM should be included which contains all the files and details of the packages used.

• Equations

The numbering of equations should be sequential, chapter wise. Numbered equations must be explicitly referred to in the text.

2. Report Size: The maximum number of pages of the Report should be preferably between 40-70 pages.

3. Report Layout: The report should contain the following components

- Front Page
- Declaration
- Student Certificate (University)
- Certificate(Company)
- Acknowledgement
- Abstract
- Contents
- List of Figures
- List of Tables
- Company Profile (optional)
- Chapters
- Appendices(optional)

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

– References / Bibliography

The above components are described below:

- **Title Page** - Format will be given by coordinator/supervisor.
- **Declaration by the Students** - This is page number (i), the beginning of the small case Roman numeral page numbers. The student has to give a declaration to the effect that the data used for the work, the work depicted in the report, and the written material contained in the report are not copied from others and that due permission has been taken from, and due credit has been given to, the sources whenever they are used.
- **Certificate** - This is page number (ii). It is given by the Institute. The certificate will be signed by the Faculty Supervisor(s) before the viva-voce after verifying the format and by the Head of the Department after review with the Supervisor(s).
- **Company Certificate** - This is a certificate, which the company gives to the students.
- **Contents** - This is page number (iii). The table of Contents should be titled just *Contents* (not Table of Contents). Try to fit it into one or two pages.
- **Acknowledgement** - This is page number (iv). Keep this brief and avoid using informal language. This page must be signed by the candidate.
- **Abstract and Keywords** - This is page number (v). The abstract (preferably one page) should contain the context/relevance of the problem at hand, a description of what was done and a gist of the significant observations/results.
- The keywords (maximum 6) are a hint that what is contained in the report.
- **Company Profile** - A Company Profile corresponds to a file with company-specific data. Company data can be stored there and included in a booking when needed.
- **Chapters** - Introduction, Literature Review/Background Study etc. as given by coordinator/supervisor.
- **References / Bibliography** - This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

ASE2737	Major Project	L	T	P	C
Version 2019-1	Date of Approval: May 2019	2	0	0	2
Pre-requisites/ Exposure					
Co-requisites					

Course Catalog

The major project provides the student with an opportunity to apply knowledge and skills learned in the classroom in carrying out a project. The major project is an in-house training on real-time project or on latest software. The experience and skills that come with carrying out major project build a foundation and aptitude in students to conduct meaningful research towards achieving practical and technological outcomes for a given engineering problem. The major project aims to impart necessary training to the students that is a value addition for their employability.

Course Objectives

The objective of this course is to

1. Provide practical training on projects that will increase the capability of the students to work individually or in teams on actual problems in industry.
2. Provide students with capabilities to design systems, analyze results, write technical reports and engage in life-long learning practices.

Course Outcomes

On completion of this course, the students will be able to

- CO1.** Relate and apply the acquired classroom knowledge with technical and real-time environment.
- CO2.** Relate and demonstrate capabilities to create and review technological solutions to complex engineering problems of relevant domains.
- CO3.** Apply the acquired knowledge to demonstrate the skills to create and compile technical reports pertaining to a given project.
- CO4.** Demonstrate the skills to work ethically and professionally in a team and engage in life-long learning.

Course Content

Guidelines

In order to achieve the objectives:

- Each student will be allotted a supervisor for proper guidance.
- Student will first submit details of company, external guide, project title to coordinator/supervisor as per given schedule.
- For internal assessment purpose, students will submit an industry feedback and a progress report.
- Student will maintain a file (Internship File/Project Report) which he/she will submit after completion of internship. Further, coordinator will provide Non-Teaching Credit Course project guidelines and sample to help in preparation of file. The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development. The file will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

The **layout guidelines** for the Project Report

1. File should be in the following specification

- A4 size paper
- Spiral Binding

• Font

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

For normal text Font Type and Size must be- Times New Roman, 12 pt. The minimum font size of materials within a table or a figure can be 10 point.

- **Margins**

A margin of 3.75 cm (1½ inch) is to be given on the binding edge while on the other sides it is to be 2.5 cm (1 inch). The text of the report, including headings, figures, tables, and notes, but excluding page numbers, must be accommodated within the page area.

- **Line Spacing**

The line spacing in the main text must be between one-and-a-half (1.5). Single line spacing should be given for figure captions, table titles, figure legends, and footnotes. Equations, tables, figures, and quotations should be set off from the main text with adequate space (not less than the normal line spacing adopted for the main text). Two consecutive paragraphs should be separated by a spacing which must be larger than the line spacing adopted for the text.

- **Tables and Figures**

Each sketch, drawing, graph and photograph should have a figure number and title below the figure etc. Numbering should be sequential, chapter wise. For instance, if there are 24 figures chapter 3 spread over all of its sections the figure numbers run from Figure 3.1 through Figure 3.24. In figures experimental data should typically be represented by centered symbols, and theoretical data by continuous curves.

Each table should have a table number and caption above the table. Numbering should be sequential, chapter wise, as in the case of Figure numbers. For instance, if there are 18 tables in chapter 3 the table numbers run from Figure 3.1 through Figure 3.18.

Make sure that figures and tables are complete in other respects such as legends, references (if any) and coordinate labels with units. Each figure and table must be explicitly referred to in the text and located where its first reference occurs, preferably after the reference.

- **Drawings**

All engineering drawings must conform to relevant Standards and should include a title block. If drawings are large they should be included at the back of the report in a separate pocket. In case drawings are made using CAD packages, a CD ROM should be included which contains all the files and details of the packages used.

- **Equations**

The numbering of equations should be sequential, chapter wise. Numbered equations must be explicitly referred to in the text.

2. Report Size: The maximum number of pages of the Report should be preferably between 40-70 pages.

3. Report Layout: The report should contain the following components

- Front Page
- Declaration
- Student Certificate (University)
- Certificate(Company)
- Acknowledgement
- Abstract
- Contents
- List of Figures
- List of Tables
- Company Profile (optional)
- Chapters
- Appendices(optional)
- References / Bibliography

The above components are described below:

- **Title Page** - Format will be given by coordinator/supervisor.

- **Declaration by the Students** - This is page number (i), the beginning of the small case Roman numeral page numbers. The student has to give a declaration to the effect that the data used for the work, the work depicted in the report, and the written material contained in the report are not copied from others and that due permission has been taken from, and due credit has been given to, the sources whenever they are used.
- **Certificate** - This is page number (ii). It is given by the Institute. The certificate will be signed by the Faculty Supervisor(s) before the viva-voce after verifying the format and by the Head of the Department after review with the Supervisor(s).
- **Company Certificate** - This is a certificate, which the company gives to the students.
- **Contents** - This is page number (iii). The table of Contents should be titled just *Contents* (not Table of Contents). Try to fit it into one or two pages.
- **Acknowledgement** - This is page number (iv). Keep this brief and avoid using informal language. This page must be signed by the candidate.
- **Abstract and Keywords** - This is page number (v). The abstract (preferably one page) should contain the context/relevance of the problem at hand, a description of what was done and a gist of the significant observations/results.
- The keywords (maximum 6) are a hint that what is contained in the report.
- **Company Profile** - A Company Profile corresponds to a file with company-specific data. Company data can be stored there and included in a booking when needed.
- **Chapters** - Introduction, Literature Review/Background Study etc. as given by coordinator/supervisor.
- **References / Bibliography** - This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

ASE2812	Aerospace Navigation, Guidance & Control	L	T	P	C
Version 2019-1	Date of Approval: May 2019	2	0	0	2
Pre-requisites/ Exposure	Introduction to Avionics				
Co-requisites					

Course Catalog

This course provides basic knowledge and understanding of science and principles governing the navigation and communication of aerospace vehicles. Knowledge of basic physics, natural laws, interplanetary flight and flight vehicles is crucial to comprehend the contents of this course. This course provides introductory knowledge to the students about the construction, components and operation of various systems and sub-systems used for navigation, guidance and communication of interplanetary flight vehicles.

Course Objectives

The objective of this course is to

1. Provide introductory knowledge to the students regarding the basic science and principles as applicable to navigation of interplanetary flight vehicles in atmosphere, space and around planetary bodies.
2. Provide education to the students about the various navigation, guidance and communication systems and subsystems of different types of spacecraft.

Course Outcomes

On completion of this course, the students will be able to

- CO1.** State, explain, and summarize the basic science and principles behind the operation of Radar.
- CO2.** State and explain the physical and natural laws as applicable to the navigation of flight vehicles in atmosphere and space.
- CO3.** List, explain, and categorize various systems and sub-systems used for navigation, guidance and control of interplanetary flight vehicles.
- CO4.** List, explain, and summarize the different Fly-by-wire avionics systems used in modern aircrafts.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Introduction Concepts of Navigation, Guidance and Control, Introduction to Basic Principles, Air Data Information, Principle of Working of Radar, MTI and Pulsed Doppler Radar, Moving Target Detector, Limitation of MTI Performance.	L1, L2	6
Module 2: Navigation on Earth's Surface Basic Principle of Navigation; Position Fixing; Global Positioning System; Geodetics and Basic Reference Frames; Simplified Aerospace Vehicle Equation; Fundamental of Navigation Equation; International Satellite navigation system.	L1, L2	6
Module 3: Guidance of Aerospace Vehicles Introduction; Classification; Description; Guidance Phases During Flight; Categories of Homing and Command Guidance, Kinematic Equations, Missile Guidance Laws; Classification of Guidance Laws; Classical Guidance Laws; Modern Guidance Laws	L1, L2	6
Module 4: Control Systems Basic Definitions; Open Loop and Closed Loop Systems; Input-Output	L1, L2	6

Version 2019-1	Date of Approval: May 2019	2	0	0	2
Pre-requisites/ Exposure					
Co-requisites					

Course Catalog

The project-dissertation provides the student with an opportunity to apply knowledge and skills learned in the classroom in carrying out a project. The project-dissertation is an in-house training on real-time project or on latest software. The experience and skills that come with carrying out project-dissertation build a foundation and aptitude in students to conduct meaningful research towards achieving practical and technological outcomes for a given engineering problem. The project-dissertation aims to impart necessary training to the students that is a value addition for their employability.

Course Objectives

The objective of this course is to

1. Provide practical training on projects that will increase the capability of the students to work individually or in teams on actual problems in industry.
2. Provide students with capabilities to design systems, analyze results, write technical reports and engage in life-long learning practices.

Course Outcomes

On completion of this course, the students will be able to

- CO1.** Relate and apply the acquired classroom knowledge with technical and real-time environment.
- CO2.** Relate and demonstrate capabilities to create and review technological solutions to complex engineering problems of relevant domains.
- CO3.** Apply the acquired knowledge to demonstrate the skills to create and compile technical reports pertaining to a given project.
- CO4.** Demonstrate the skills to work ethically and professionally in a team and engage in life-long learning.

Course Content

Guidelines

In order to achieve the objectives:

- Each student will be allotted a supervisor for proper guidance.
- Student will first submit details of company, external guide, project title to coordinator/supervisor as per given schedule.
- For internal assessment purpose, students will submit an industry feedback and a progress report.
- Student will maintain a file (Internship File/Project Report) which he/she will submit after completion of internship. Further, coordinator will provide Non-Teaching Credit Course project guidelines and sample to help in preparation of file. The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development. The file will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

The **layout guidelines** for the Project Report

1, File should be in the following specification

- A4 size paper
- Spiral Binding

• Font

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

For normal text Font Type and Size must be- Times New Roman, 12 pt. The minimum font size of materials within a table or a figure can be 10 point.

- **Margins**

A margin of 3.75 cm (1½ inch) is to be given on the binding edge while on the other sides it is to be 2.5 cm (1 inch). The text of the report, including headings, figures, tables, and notes, but excluding page numbers, must be accommodated within the page area.

- **Line Spacing**

The line spacing in the main text must be between one-and-a-half (1.5). Single line spacing should be given for figure captions, table titles, figure legends, and footnotes. Equations, tables, figures, and quotations should be set off from the main text with adequate space (not less than the normal line spacing adopted for the main text). Two consecutive paragraphs should be separated by a spacing which must be larger than the line spacing adopted for the text.

- **Tables and Figures**

Each sketch, drawing, graph and photograph should have a figure number and title below the figure etc. Numbering should be sequential, chapter wise. For instance, if there are 24 figures chapter 3 spread over all of its sections the figure numbers run from Figure 3.1 through Figure 3.24. In figures experimental data should typically be represented by centered symbols, and theoretical data by continuous curves.

Each table should have a table number and caption above the table. Numbering should be sequential, chapter wise, as in the case of Figure numbers. For instance, if there are 18 tables in chapter 3 the table numbers run from Figure 3.1 through Figure 3.18.

Make sure that figures and tables are complete in other respects such as legends, references (if any) and coordinate labels with units. Each figure and table must be explicitly referred to in the text and located where its first reference occurs, preferably after the reference.

- **Drawings**

All engineering drawings must conform to relevant Standards and should include a title block. If drawings are large they should be included at the back of the report in a separate pocket. In case drawings are made using CAD packages, a CD ROM should be included which contains all the files and details of the packages used.

- **Equations**

The numbering of equations should be sequential, chapter wise. Numbered equations must be explicitly referred to in the text.

2. Report Size: The maximum number of pages of the Report should be preferably between 40-70 pages.

3. Report Layout: The report should contain the following components

- Front Page
- Declaration
- Student Certificate (University)
- Certificate(Company)
- Acknowledgement
- Abstract
- Contents
- List of Figures
- List of Tables
- Company Profile (optional)
- Chapters
- Appendices(optional)
- References / Bibliography

The above components are described below:

- **Title Page** - Format will be given by coordinator/supervisor.

- **Declaration by the Students** - This is page number (i), the beginning of the small case Roman numeral page numbers. The student has to give a declaration to the effect that the data used for the work, the work depicted in the report, and the written material contained in the report are not copied from others and that due permission has been taken from, and due credit has been given to, the sources whenever they are used.
- **Certificate** - This is page number (ii). It is given by the Institute. The certificate will be signed by the Faculty Supervisor(s) before the viva-voce after verifying the format and by the Head of the Department after review with the Supervisor(s).
- **Company Certificate** - This is a certificate, which the company gives to the students.
- **Contents** - This is page number (iii). The table of Contents should be titled just *Contents* (not Table of Contents). Try to fit it into one or two pages.
- **Acknowledgement** - This is page number (iv). Keep this brief and avoid using informal language. This page must be signed by the candidate.
- **Abstract and Keywords** - This is page number (v). The abstract (preferably one page) should contain the context/relevance of the problem at hand, a description of what was done and a gist of the significant observations/results.
- The keywords (maximum 6) are a hint that what is contained in the report.
- **Company Profile** - A Company Profile corresponds to a file with company-specific data. Company data can be stored there and included in a booking when needed.
- **Chapters** - Introduction, Literature Review/Background Study etc. as given by coordinator/supervisor.
- **References / Bibliography** - This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

ASE2813	Aeroelasticity	L	T	P	C
Version 2019-1	Date of Approval: May 2019	2	0	0	2
Pre-requisites/ Exposure	High Speed Aerodynamics				
Co-requisites					

Course Catalog

This course provides basic knowledge and understanding of aeroelastic phenomenon. The courses on educating students about different aeroelastic phenomenon related to aircraft and their effect on aircraft performance. This also provides mathematical strategies to solve aeroelastic problems. Knowledge of basic strength of materials and aerodynamics is crucial to comprehend the content this course. This course serves as a prerequisite for designing of engine components.

Course Objectives

The objective of this course is to

1. Provide students knowledge about the Elastic behavior of the different parts of aircraft under loads.
2. Educate the students about the theories and laws governing the aero elasticity.
3. Provide solution of elastic phenomenon for arbitrary shaped oscillatory objects.

Course Outcomes

On completion of this course, the students will be able to

- CO1.** Define, explain and apply about the elastic behavior of the different parts of aircraft under loads
- CO2.** Define, explain, apply and distinguishes between static and dynamic aero elastic phenomenon.
- CO3.** Define, explain, and apply phenomena of divergence of 2D wing sections and cantilever wind and their solutions in generalized co-ordinates.
- CO4.** Define and explain reversal of aileron and its consequences on longitudinal stability.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Introduction Definition and historical background, Static and dynamic aeroelasticity phenomenon, integration of aerodynamic, elastic and inertia forces, Influence of aeroelasticity phenomenon on aircraft design	L1, L2, L3	5
Module 2: Divergence of Lifting Surface Phenomenon of divergence, Divergence of 2-D wing section, Divergence of an idealized cantilever wing, Solution to generalized co-ordinates, Method of successive approximation	L1, L2, L3	5
Module 3: Steady State Aeroelasticity Problems in General Loss and reversal of aileron control: 2D case, Aileron reversal general case, Lift distribution on a rigid and elastic wing, Effect on static longitudinal stability of aircraft	L1, L2, L3	4
Module 4: Introduction to Flutter and Buffeting Phenomenon of flutter, Flutter of a cantilever wing, Approximate determination of critical speed by Galerkin's Method, Buffeting and stall flutter	L1, L2, L3	5
Module 5: Non - Aeroelastic Problems Flow around an oscillating circular cylinder, Applications to H-shaped sections, Prevention of aero-elastic instabilities	L1, L2	5

ASE2814	Aerospace Industrial Management	L	T	P	C
Version 2019-1	Date of Approval: May 2019	2	0	0	2
Pre-requisites/ Exposure	Introduction to Aerospace Engineering				
Co-requisites					

Course Catalog

This course provides basic knowledge and understanding of the management practices of airlines, airports and businesses related to the aerospace industry. This course is aimed to equip the students with necessary information and knowledge about the various aspects related to the design, maintenance, and production management practices of aerospace industries.

Course Objectives

The objective of this course is to

1. Provide introductory knowledge to the students regarding the management practices of aerospace industries for the maintenance and design of flight vehicles.
2. Provide education to the students about the production, safety and quality management practices followed in aerospace industries.

Course Outcomes

On completion of this course, the students will be able to

- CO1.** Identify, describe, and compare amongst the various management practices and principles followed by aerospace industries for maintenance of flight vehicles.
- CO2.** Identify, describe, and compare amongst the various management practices and principles followed by aerospace industries for product design.
- CO3.** Identify, describe, and compare amongst the various management practices and principles followed by aerospace industries for preferred production processes.
- CO4.** Identify, describe, and compare amongst the various management practices and principles followed by aerospace industries regarding the safety and outcome quality of carried out processes.

CSE2104	INTRODUCTION TO COMPUTERS AND PROGRAMMING IN C	L	T	P	C
Version: 2017.1	Date of Approval: 14 th June 2017	2	1	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The objective of this course module is to acquaint the students with the basics of computers system, its components, data representation inside computer and to get them familiar with various important features of procedure-oriented programming language i.e. C.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of Programming through C Language
2. Provide an overview of advanced programming concepts like Structure, Union and File Handling

Course Outcomes

On completion of this course, the students will be able to

After the completion of course, the students will be able to,

- CO 1: Define the purpose and structure of C Program for programming; identify and distinguish various datatypes and operators; conditional and control statement; Apply if-else, Switch and loops to rewrite basic C program for problem solving.
- CO 2: Compare and contrast various Array types, its declaration and implementation; differentiate between Call by Value and Reference if Functions; apply the concepts to rewrite C Programs
- CO 3: Differentiate between various String Handling Functions; describe the concept of Pointers in C Language
- CO 4: Explain the concept of Structure and Union; apply the concept of File Handling to provide data storage support to the programs.
- CO 5: Apply the concept of Computer Graphics using C programming concepts for implementing line drawing, circle drawing algorithms.

Modules	Blooms level*	Number of hours
Module I: Introduction Introduction to computer, history, von-Neumann architecture, memory system (hierarchy, characteristics and types), H/W concepts (I/O Devices), S/W concepts (System S/W & Application S/W, utilities). Data Representation: Number systems, character representation codes, Binary, octal, hexadecimal and their interconversions. Binary arithmetic, floating point arithmetic, signed and unsigned numbers, Memory storage unit.	L1, L2 and L3	7
Module II: Programming in C History of C, Introduction of C, Basic structure of C program, Concept of variables, constants and data types in C, Operators and expressions: Introduction, arithmetic, relational, Logical, Assignment, Increment and decrement operator, Conditional, bitwise operators, Expressions, Operator precedence and associativity. Managing Input	L2, L3 and L4	7

and output Operation, formatting I/O.		
Module III: Fundamental Features in C C Statements, conditional executing using if, else, nesting of if, switch and break Concepts of loops, example of loops in C using for, while and do-while, continue and break. Storage types (automatic, register etc.), predefined processor, Command Line Argument.	L2, L3 and L4	7
Module IV: Arrays and Functions One dimensional arrays and example of iterative programs using arrays, 2-D arrays Use in matrix computations. Concept of Sub-programming, functions Example of user defined functions. Function prototype, Return values and their types, calling function, function argument, function with variable number of argument, recursion.	L2 and L3	7
Module V: Advanced features in C Pointers, relationship between arrays and pointers Argument passing using pointers, Array of pointers. Passing arrays as arguments. Strings and C string library. Structure and Union. Defining C structures, Giving values to members, Array of structure, Nested structure, passing strings as arguments. File Handling.	L2, L3 and L4	8

CSE2107	PROGRAMMING IN C LAB	L	T	P	C
Version 2017.1	Date of Approval: 14 June, 2017	0	0	2	1
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The primary objective of this course is to understand all the components of C, including the C language, the C Preprocessor, and the C Standard Library. An understanding of some advanced practical issues, including memory management, testing and debugging, complex declarations and expression evaluation, building and using libraries, and evaluating tradeoffs, such as size vs. speed and speed vs. complexity. The ability to write C code and create and manipulate logical programs.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of Programming through C Language
2. Provide an overview of advanced programming concepts like Structure, Union and File Handling.

Course Outcomes

After the completion of course, the students will be able to,

- CO 1: Demonstrate the use of various data types and operators in C programs; Solve various problems using conditional control statements (if-else, Switch case).
- CO 2: Construct C programs related to problems involving the usage of loops, arrays and functions.
- CO 3: Apply the concept of Pointers for efficient memory management and construct C programs using string handling functions.
- CO 4: Demonstrate the use of Structure, Union and concept of File Handling to provide data storage support to the programs.

Modules	Blooms level*	Number of hours
LABORATORY SESSSION 1 OPERATORS, EXPRESSIONS and DECISION MAKING <ol style="list-style-type: none"> 1. Write a program to calculate simple interest and amount. 2. Write a program to swap two numbers using third variable. 3. Write a program to demonstrate Greatest of 3 nos and to print the given no in ascending order. 4. Write a program to check if the number is even or odd. 5. Write a program to perform arithmetic operations using Switch Case statement. 6. Write a program to calculate area of circle, rectangle, square and triangle using Switch Case statement. 	L3	5
LABORATORY SESSSION 2 LOOPING <ol style="list-style-type: none"> 1. Write a program to find factorial of given no using do while statement. 	L3	6

2. Write a program to print prime numbers up to 'n'. 3. Write a program to sum of n natural no. 4. Write a program to print Fibonacci series. 5. Write a program to reverse a number. 6. Write a program to print the following pattern using for loop 1 2 2 3 3 3 4 4 4 4 7. Write a program to print the following pattern using for loop A A B A B C A B C D		
LABORATORY SESSSION 3 ARRAYS and FUNCTIONS 1. Write a program to read n num of students and 5 subjects marks. 2. Write a program to swap two numbers using call by value. 3. Write a program to convert all lower case to uppercase characters 4. Write a program to find the factorial of a number using recursion. 5. Write a program to print the add/product of two matrices of any order.	L3	5
LABORATORY SESSSION 4 POINTERS AND STRING 1. Write a program to perform operations on strings using string handling in-built functions (concatenation, reversal, copy etc.) 2. Write a program to swap two numbers using call by reference. 3. Write a program to perform dynamic memory allocation and deallocation. 4. Write a program to print elements of array using pointers.	L3	4
LABORATORY SESSSION 5 STRUCTURE,UNION & FILE HANDLING 1. WAP program to display student information by initializing structures. 2. WAP program to find the total salary of employee and employee details using structure. 3. Write a program to store and display information using Union. 4. Program to write data into file and read data from file.	L3	4

CSE2204	OBJECT ORIENTED PROGRAMMING USING C++	L	T	P	C
Version 1.1	Date of Approval: 14 th June 2017	2	1	0	3
Pre-requisites/Exposure	Hands on knowledge of C Programming				
Co-requisites	Basic concepts of C Programming				

Catalog Description

The objective of this course is to introduce object-oriented programming. To explore and implement the various features of OOP such as inheritance, polymorphism, Exceptional handling using programming language C++. After completing this course student can easily identify the basic difference between the programming approaches like procedural and object oriented.

Course Objectives

The objective of this course is

1. Equip the students with the basic features of C++ supporting object-oriented programming. Perform object oriented programming to develop solutions to problems demonstrating usage of control structures, modularity, I/O. and other standard language constructs.
2. Provide the overview of major object-oriented concepts to implement object oriented programs in C++ like encapsulation, inheritance and polymorphism, stream I/O, templates and operator overloading

Course Outcomes

On completion of this course, the students will be able to

- CO 1: Explain the basic principles of object-oriented programming approach; Differentiate it with procedural programming approach and also discuss difference between C and C++.
- CO 2: Illustrate the different ways to define a member function inline and explain how the private members of a class can be accessed. Explain how the objects can be instantiated and destroyed with static data member?
- CO 3: Explain the concept of inheritance, types and implementation with suitable examples; find out ambiguity problem in inheritance; use the concept of overriding and constructors in inheritance.
- CO 4: Explain polymorphism in detail and implement the concept of overloading in functions as well as in operators. Write the programs for virtual function and pointer with objects.
- CO 5: Explain the exception handling mechanism. Design the programs for class and function Template. Compare and contrast various formatted and unformatted i/o function in file handling.

Modules	Blooms level*	Number of hours
MODULE 1: INTRODUCTION Review of C, Difference between C and C++, Procedure Oriented and Object Oriented Approach. Basic Concepts: Objects, classes, Principals like Abstraction, Encapsulation, Inheritance and	L1 and L2	5

Polymorphism. Dynamic Binding, Message Passing. Characteristics of Object-Oriented Languages. Introduction to Object-Oriented Modeling techniques (Object, Functional and Dynamic Modeling).		
MODULE 2: CLASSES AND OBJECTS Abstract data types, Object & classes, attributes, methods, C++ class declaration, Local Class and Global Class, State identity and behaviour of an object, Local Object and Global Object, Scope resolution operator, Friend Functions, Inline functions, Constructors and destructors, instantiation of objects, Types of Constructors, Static Class Data, Array of Objects, Constant member functions and Objects, Memory management Operators.	L1, L2 and L3	7
MODULE 3: INHERITANCE Inheritance, Types of Inheritance, access modes – public, private & protected, Abstract Classes, Ambiguity resolution using scope resolution operator and Virtual base class, Aggregation, composition vs classification hierarchies, Overriding inheritance methods, Constructors in derived classes, Nesting of Classes	L2, L3 and L4	8
MODULE 4: POLYMORPHISM Polymorphism, Type of Polymorphism – Compile time and runtime, Function Overloading, Operator Overloading (Unary and Binary) Polymorphism by parameter, Pointer to objects, this pointer, Virtual Functions, pure virtual functions.	L2, L3 and L4	8
MODULE 5: STRINGS, FILES AND EXCEPTION HANDLING Manipulating strings, Streams and files handling, formatted and Unformatted Input output. Exception handling, Generic Programming – function template, class Template Standard Template Library: Standard Template Library, Overview of Standard Template Library, Containers, Algorithms, Iterators, Other STL Elements, The Container Classes, General Theory of Operation, Vectors.	L2, L3 and L4	8

CSE2208	OBJECT ORIENTED PROGRAMMING USING C++ LAB	L	T	P	C
Version 2017.1	Date of Approval: 14 th June 2017	0	0	1	1
Pre-requisites/Exposure	Turbo C++				
Co-requisites	NIL				

Catalog Description

The objective of this course is to introduce object-oriented programming. To explore and implement the various features of OOP such as inheritance, polymorphism, Exceptional handling using programming language C++. After completing this course student can easily identify the basic difference between the programming approaches like procedural and object oriented.

Course Objectives

The objective of this course is

1. Perform object-oriented programming to develop solutions to problems demonstrating usage of control structures, modularity, I/O. and other standard language constructs.
2. Demonstrate adeptness of object-oriented programming in developing solutions to problems demonstrating usage of data abstraction, encapsulation, and inheritance.
3. Demonstrate ability to implement one or more patterns involving realization of an abstract interface and utilization of polymorphism in the solution of problems which can take advantage of dynamic dispatching, syntax, features of, and how to utilize the Standard Template Library.

Course Outcomes

On completion of this course, the students will be able to

- CO 1: Define and identify the basic principles of object-oriented programming approach; Differentiate it with procedural programming approach.
- CO 2: Determine the different ways to define a member function inline and explain how the private members of a class can be accessed. Solve how the objects can be instantiated and destroyed with static data member?
- CO 3: Apply the concept of inheritance, types and implementation with suitable examples; find out ambiguity problem in inheritance; use the concept of overriding and constructors in inheritance.
- CO 4: Relate the concept polymorphism with overloading in detail and implement the concept of overloading in functions as well as in operators. Write the programs for virtual function and pointer with objects.
- CO 5: Determine the exception handling mechanism. Design the programs for class and function Template. Compare and contrast various formatted and unformatted i/o function in file handling.

Modules/ Topics Covered**	Blooms level*	Number of hours
1. Sample Programs using objects and classes (a) Write a program to illustrate the concept of one class with two objects by taking student data. (b) Write a program to show the relationship of class and object to display roll no., grade and fee paid by student.	L1, L3, L5	4
2. Sample Programs for different use of private, public member	L1, L3,	4

variables and functions and friend functions (a) Write a program to define the member function outside and inside the class. (b) Write a program to read and display the information of N persons to illustrate the concept of array of objects. (c) Write a program to add two numbers to illustrate the use of friend function.	L5	
3. Sample Programs using constructors and destructors (a) Write a program to assign and copy values to illustrate the concept of parametrized and copy constructor. (b) Write a program to show the order of constructor and destructor.	L1, L3, L5	4
4. Sample Programs using operator overloading (a) Write a program to add two numbers using binary operator overloading. (b) Write a program to illustrate the assignment operator overloading.	L1, L3, L5	4
5. Sample Programs using inheritance in and accessing objects of different derived classes (a) Write a program to compute the marks explaining the concept of multiple inheritance. (b) Write a program to find the factorial of a number using inheritance.	L1, L3, L5	4
6. Sample Programs using polymorphism and virtual functions (using pointers) and File Handling (a) Write a program to find the volume of cylinder and cuboid using function overloading. (b) Write a program to reverse a string using pointers. (c) Write a program to explain the relationship of inheritance and virtual function. (d) Write a program to read the student name and fee paid using read() function from the file.	L1, L3, L4, L5	4

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

**** Sample Programs provided are not limited to these only, can include others as desired.**

BASICS OF ELECTRICAL & ELECTRONICS ENGINEERING LAB

Course Code: CSE2218

Credit Units: 01

List of Experiments:

1. To verify KVL & KCL in the given network.
2. To verify Superposition Theorem.
3. To verify Maximum Power Transfer Theorem.
4. To verify Reciprocity Theorem.
5. To determine and verify R_{Th} , V_{Th} , R_N , I_N in a given network.
6. To perform open circuit & short circuit test on a single-phase transformer.
7. To study transient response of a given RLC Circuit.
8. To perform regulation, ratio & polarity test on a single-phase transformer.
9. To measure power & power factor in a three phase circuit by two wattmeter method.
10. To measure power & power factor in a three phase load using three ammeter & three voltmeter method.

ENGINEERING GRAPHICS LAB

Course Code: CSE2219

Credit Units : 02

Course Objective:

This course will provide students concepts on the drawings of different curves like straight line, parabola, ellipse etc. After completion of this course, students will be able to draw different figures manually and will be capable of using various instruments involved in drawings.

Course Contents:

Module I: General

Importance, Significance and scope of engineering drawing, Lettering, Dimensioning, Scales, Sense of proportioning, Different types of projections, Orthographic Projection, B.I.S. Specifications.

Module II: Projections of Point and Lines

Introduction of planes of projection, Reference and auxiliary planes, projections of points and Lines in different quadrants, traces, inclinations, and true lengths of the lines, projections on Auxiliary planes, shortest distance, intersecting and non-intersecting lines.

Module III: Planes other than the Reference Planes

Introduction of other planes (perpendicular and oblique), their traces, inclinations etc., Projections of points and lines lying in the planes, conversion of oblique plane into auxiliary Plane and solution of related problems.

Module IV: Projections of Plane Figures

Different cases of plane figures (of different shapes) making different angles with one or both reference planes and lines lying in the plane figures making different given angles (with one of both reference planes). Obtaining true shape of the plane figure by projection.

Module V: Projection of Solids

Simple cases when solid is placed in different positions, Axis faces and lines lying in the faces of the solid making given angles.

Module VI: Development of Surface

Development of simple objects with and without sectioning. Isometric Projection

Examination Scheme:

CSE2302	DATABASE MANAGEMENT SYSTEMS	L	T	P	C
Version 2017.1	Date of Approval: 14 June 2017	3	1	0	4
Pre-requisites/Exposure	Computer Fundamentals and Mathematics Set Theory				
Co-requisites	Nil				

Catalog Description

This course is design to get students familiar with the fundamentals & basic concepts in Data Base Management Systems and their use. This course discusses architecture of Database Systems with concept of different types of available database model, concurrency techniques and new applications of the DBMS. The techniques for database design, normalization, database recovery and protection will enable students to work easily and efficiently on real databases.

Course Objectives

The objective of this course is

1. To make students familiar with the fundamental and necessary concepts of DBMS.
2. Provide an overview of normalization, concurrency techniques and database recovery with examples.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Differentiate between traditional data processing system and database management system and understand characteristics and applications of DBMS in real world.
- CO2. Explain and use different data models such as Entity Relationship Model, Network, and Relational Model etc.
- CO3. Solve queries using relational algebra, relational calculus and SQL.
- CO4. Illustrate normalization concepts and apply them in real database applications.
- CO5. Explain database concurrency techniques and recovery mechanisms.

Modules	Blooms level*	Number of hours
Module I: Introduction Concept and goals of DBMS, Database Languages, Database Users, Database Abstraction. Basic Concepts of ER Model, Relationship sets, Keys, Mapping, Design of ER Model.	L1, L2 and L6	9
Module II: Hierarchical model & Network Model Concepts, Data definition, Data manipulation and implementation. Network Data Model, DBTG Set Constructs, and Implementation	L1 and L2	9
Module III: Relational Model Relational database, Relational Algebra, Relational & Tuple Calculus.	L1 and L3	10

Module IV: Relational Database Design and Query Language SQL, QUEL, QBE, Normalization using Functional Dependency, Multivalued dependency and Join dependency.	L2, L3 and L4	10
Module V: Concurrency Control and New Applications Transaction basics: ACID property, Lifecycle of Transaction, Why Concurrency Control, Schedule, Serializability, Lock Based Protocols, Time Stamped Based Protocols, Deadlock Handling, Crash Recovery. Distributed Database, Objective Oriented Database, Multimedia Database, Data Mining, Digital Libraries.	L2, L3 and L4	10

CSE2303	OPERATING SYSTEMS	L	T	P	C
Version 2017.1	Date of Approval: 14 th June 2017	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

In this course Operating System, its generic types, characteristics and functions are discussed in detail. Concepts covered would enable students to identify various categories of operating systems, with details about concepts of process management and scheduling. Contents will be helpful in identifying deadlocks in the system and designated approaches used to prevent, handle or recover from them. Further it covers the concepts of managing memory, devices and mechanisms for providing security to system and files using operating system.

Course Objectives

The objective of this course is to

1. Equip the students with the knowledge about categories of operating systems and their functions.
2. Provide detailed knowhow about functions of operating system like process, memory and device management along with file system security and protection.

Course Outcomes

On completion of this course, the students will be able to

- CO1: Define and explain operating systems and their evolution, also differentiate among its various types.
- CO2: Explain concepts of process and inter-process communication and synchronization. Identify solutions to detect, prevent and handle deadlocks occurring in the operating systems. Solve synchronization and CPU scheduling problems related to processes.
- CO3: Define and explain concepts of memory management like fragmentation, paging and segmentation. Solve problems related to memory management using page replacement algorithms.
- CO4: Describe the concepts of device management and list various disk allocation methods. Determine solutions for disk scheduling problems using available disk scheduling algorithms.
- CO5: State the concept of file and file system security, also distinguish among various file allocation methods.

Modules	Blooms level*	Number of hours
MODULE 1: INTRODUCTION TO OPERATING SYSTEM Operating system and function, Evolution of operating system, Batch, Interactive, multiprogramming, Time Sharing and Real Time System, multiprocessor system, Distributed system, System protection. Operating System structure, Operating System Services, System Program and calls	L1, L2 and L4	6

MODULE 2: PROCESS MANAGEMENT Process concept, State model, process scheduling, job and process synchronization, structure of process management, Threads Interprocess Communication and Synchronization: Principle of Concurrency, Producer Consumer Problem, Critical Section problem, Semaphores, Hardware Synchronization, Critical Regions, Conditional critical region, Monitor, Inter Process Communication. CPU Scheduling: Job scheduling functions, Process scheduling, Scheduling Algorithms, Non-Preemptive and preemptive Strategies, Algorithm Evaluation, Multiprocessor Scheduling. Deadlock: System Deadlock Model, Deadlock Characterization, Methods for handling deadlock, Prevention strategies, Avoidance and Detection, Recovery from deadlock combined approach	L1, L2 and L3	12
MODULE 3: MEMORY MANAGEMENT Single Contiguous Allocation: H/W support, S/W support, Advantages and disadvantages, Fragmentation, Paging, Segmentation, Virtual memory concept, Demand paging, Performance, Paged replaced algorithm, Allocation of frames, Thrashing, Cache memory, Swapping, Overlays	L1, L2 and L3	7
MODULE 4: DEVICE MANAGEMENT Principles of I/O hardware, Device controller, Device Drivers, Memory mapped I/O, Direct Access Memory, Interrupts, Interrupt Handlers, Application I/O interface, I/O Scheduling, Buffering, Caching, Spooling, Disk organization, Disk space management, Disk allocation Method, Disk Scheduling, Disk storage	L1, L2 and L3	7
MODULE 5: FILE SYSTEM AND PROTECTION AND SECURITY File Concept, File Organization and Access Mechanism, File Directories, Basic file system, File Sharing, Allocation method, Free space management. Policy Mechanism, Authentication, Internal excess Authorization	L1 and L2	4

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5:Synthesis, L6:Evaluation

CSE2304	DATA STRUCTURES USING C	L	T	P	C
Version:2017.1	Date of Approval: 14 th June 2017	3	1	2	5
Pre-requisites/Exposure	Basic Knowledge of C++ Programming				
Co-requisites	Nil				

Catalog Description

This course covers the design, analysis, and implementation of data structures and algorithms to solve engineering problems using C programming language. Topics include elementary data structures, (including arrays, stacks, queues, and lists), advanced data structures (including trees and graphs), the algorithms used to manipulate these structures, and their application to solving practical engineering problems. At the end of this course student will gain knowledge about different kinds of file structures and their related operations.

Course Objectives

The objective of this course is to

- Equip the students with knowledge of algorithms, different types of data structures and analysis of space and time complexity.
- Provide an overview of various algorithms of data structures like stack and queues and related operations and implementation.
- Provide an overview of dynamic Data Structure like linked list and its related operations, algorithms and programs. Demonstrate practical use of dynamic data structure to solve engineering problems.
- Equip the students with knowledge of algorithms and operations related to tree and graph data structures and their practical applications.
- Provide an overview of Sorting, Searching and file structures and its related algorithms and techniques.

Course Outcomes

On completion of this course, the students will be able to

CO1: Identify operations on array, multidimensional, string and their implementation and analyze space and time complexity of algorithms.

CO2: Explain various algorithms and operations of data structures like stack and queues and analyze complexity of each operation.

CO3: Explain dynamic data structures and various algorithms and operations of data structures like linked list and their applications in computer science.

CO4: Illustrate the algorithms and operations related to tree and graph data structures, their practical applications and analyze complexity of algorithm associated with each operations

CO5: Explain Sorting, Searching and file organization and its related techniques.

Modules	Blooms level*	Number of hours
Module I: Introduction to Data structures Data structures: Definition, Types. Algorithm design, Complexity, Time-Space Tradeoffs. Use of pointers in data structures. Array Definition and Analysis, Representation of Linear Arrays in Memory, Traversing of Linear Arrays, Insertion and Deletion, Single Dimensional Arrays, Two Dimensional Arrays, Multidimensional Arrays, Function Associated with Arrays, Character String in C, Character String Operations, Arrays as parameters, Implementing One Dimensional Array, Sparse matrix.	L1, L2	7
Module II: Introduction to Stacks and queue Stack: Definition, Array representation of stacks, Operations Associated with Stacks- Push & Pop, Polish expressions, Conversion of infix to postfix, infix to prefix (and vice versa), Application of stacks recursion, polish expression and their compilation, conversion of infix expression to prefix and postfix expression, Tower of Hanoi problem. Queue: Definition, Representation of Queues, Operations of queues- QInsert, QDelete, Priority Queues, Circular Queue, Dequeue.	L1, L2, L3, L4	8
Module III: Dynamic Data Structure Linked list: Introduction to Singly linked lists: Representation of linked lists in memory, Traversing, Searching, Insertion into, Deletion from linked list, doubly linked list, circular linked list, generalized list. Applications of Linked List-Polynomial representation using linked list and basic operation. Stack and queue implementation using linked list.	L1, L3 and L4	7
Module IV: Trees and Graphs Trees: Basic Terminology, Binary Trees and their representation, expression evaluation, Complete Binary trees, extended binary trees, Traversing binary trees, Searching, Insertion and Deletion in binary search trees, General trees, AVL trees, Threaded trees, B trees. Graphs: Terminology and Representations, Graphs & Multigraphs, Directed Graphs, Sequential representation of graphs, Adjacency matrices, Transversal Connected Component and Spanning trees.	L1, L3 and L5	7
Module V: Sorting and Searching and file structures Sorting: Insertion Sort, Bubble sort, Selection sort, Quick sort, two-way Merge sort, Heap sort, Partition exchange sort, Shell sort, Sorting on different keys, External sorting. Searching: Linear search, Binary search File structures: Physical storage media, File Organization, Linked organization of file, Inverted file, Organization records into blocks, Sequential blocks, Hash function, Indexing & Hashing, Multilevel indexing, Tree Index, Random file, Primary Indices, Secondary Indices, B tree index files.	L1, L4, L5	7

CSE2314	DIGITAL ELECTRONICS	L	T	P	C
Version 2019.1	Date of Approval: 15 May 2019	2	0	2	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course explores the theory and operation of the basic building blocks of digital electronics which includes combinational and sequential circuits. This course also explains the logic families and data convertors. The concepts learnt in the studies of sequential circuits will be applied in the design and analysis of Melay and Moore machines.

Course Objectives

The objective of this course is to

1. Provide the basic knowledge of digital logic levels and application of knowledge to understand combinational and sequential circuits.
2. Explain the operation of logic family and data convertors.

Course Outcomes

On completion of this course, the students will be able to

- CO1: Explain the difference between analog and digital signal; Describe the Boolean algebra; Analyze the SOP & POS form of Boolean function; Solve k-map and tabulation method to simplify the logical function; Apply universal gates to implement the given logic.
- CO2: Define the multiplexer and decoder; Explain the adder & subtractor; Apply multiplexer to design Boolean function; Analyze the difference between decoder and encoder.
- CO3: Define flip flops; Compare combinational and sequential circuits; Describe shift registers; Design counters and synchronous sequential circuits.
- CO4: Explain the logic families; Compare the RTL, DTL, TTL and ECL logic families.
- CO5: Define data convertors; Explain analog to digital convertor and digital to analog convertor.

Modules	Blooms level*	Number of hours
MODULE 1: BOOLEAN FUNCTIONS Analog & digital signals, AND, OR, NOT, NAND, NOR & XOR gates, Boolean algebra, Standard representation of logical functions, K-map representation and simplification of logical function, don't care conditions, XOR & XNOR simplifications of K-maps, Tabulation method.	L1,L2 and L3	6
MODULE 2: COMBINATIONAL CIRCUITS Adders, Subtractors, Multiplexer, de-multiplexer, decoder & encoder, code converters, Comparators, decoder / driver for display devices, Implementation of logic functions using multiplexer / de-multiplexer.	L1, L2,L3 and L4	6
MODULE 3: SEQUENTIAL CIRCUITS Flip-flops: SR, JK, D & T flip flops – Truth table, Excitation table, Conversion of flip-flops, race around condition, Master Slave flip	L1, L2,L4 and L5	8

flop, Shift registers: SIPO, PISO, PIPO, SIPO, Bi-directional; Counters: ripple & synchronous counters – up / down; Synchronous Sequential circuit: design procedure.		
MODULE 4: LOGIC FAMILIES RTL, DTL, TTL, ECL.	L2 and L4	2
MODULE 5: DATA CONVERTERS ADC – successive approximation, linear ramp, dual slope; DAC – Binary Weighted, R-2R ladder type.	L1 and L2	2

CSE2307	DATABASE MANAGEMENT SYSTEMS LAB	L	T	P	C
Version 2017.1	Date of Approval: 14 June 2017	0	0	2	1
Pre-requisites/Exposure	Basic Concepts of DBMS				
Co-requisites	Relational Algebra and Relational Calculus				

Catalog Description

This course is designed to get students familiar with the basic concepts of SQL including DDL, DML and DCL statements. The course also explains the basic concepts of PL/SQL. Students will learn practical on Oracle software and hence can work on any RDBMS software in future.

Course Objectives

The objective of this course is

1. To make students familiar with the concepts and working of SQL.
2. Provide an overview of PL/SQL.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Illustrate SQL basic concepts like languages DDL, DML etc., data types and working.
CO2. Explain concepts of database creation, manipulation of data and data retrieval and apply them in real database applications.
CO3. Design and implement various data constraints on a database for a given problem.
CO4. Solve queries using concepts like joins, subqueries, aggregate functions, triggers etc.
CO5. Prepare PL/SQL blocks.

Modules	Blooms level*	Number of hours
Lab Session 1 Introduction of RDBMS, Oracle, SQL and data types.	L1 and L2	2
Lab Session 2 Basic concept of database creation and manipulation of data.	L1 and L3	2
Lab Session 3 Working with SELECT query.	L1 and L3	2
Lab Session 4 To apply data constraints on a table-Primary Key, Not Null, Unique.	L1 and L3	2
Lab Session 5 Working with Foreign Key and Check Constraint.	L1 and L3	2
Lab Session 6 To implement the basic concept of Aggregate and Grouping Functions.	L1 and L3	2
Lab Session 7	L1 and	2

To apply various set operators on data.	L3	
Lab Session 8 Concept of Nested queries in database and its application in database.	L1 and L3	2
Lab Session 9 Implementation different types of JOINS in database.	L1 and L3	2
Lab Session 10 Basic concepts of Triggers and Procedures and related queries.	L1 and L3	2
Lab Session 11 Introduction to PL/SQL and basic syntax.	L1 and L3	2
Lab Session 12 Write programs in PL/SQL Using Control Structures.	L3	2

**Bloom's Level:*

CSE2308	UNIX PROGRAMMING LAB	L	T	P	C
Version 2017.1	Date of Approval: 14 th June 2017	0	0	2	1
Pre-requisites/Exposure	Basic knowledge of Operating System				
Co-requisites					

Catalog Description

This course introduces the UNIX operating system commands, shell programming. Explores the use of operating system utilities such as vi text editors, filters, process handling etc.

Course Objectives

The objective of this course is to

1. Provide knowledge of working on Unix.
2. Provide sound foundation of writing Shell scripts.
3. Implement features like piping, filters and redirection.

Course Outcomes

On completion of this course, the students will be able to

CO1: To implement various Unix commands.

CO2: To demonstrate the use of Vi Editor and other editors of UNIX.

CO3: To write simple Shell scripts.

Modules	Blooms level*	Number of hours
1. UNIX structure, history, basic commands.	L1,L3	10
2. Working of Vi Editor and its commands.	L1,L3	4
3. Shell Script <ol style="list-style-type: none"> Write shell script to find largest among three numbers. Write shell script to print multiplication table of any number. Write a shell script that copies multiple files into directory. Write a shell script to find number of words and characters in a given file. Write a shell script to find the sum, the average and the product of the four integers entered. Write a shell script to calculate the factorial of a number. Write a shell script to generate Fibonacci series. Write a shell script that computes the gross salary of employee. Write a shell script that takes a command –line argument and reports on whether it is directory, a file, or something else. Write a shell script which receives two file names as arguments. It should check whether the two file contents are same or not. If they are same then second file should be deleted. Write a shell script to calculate gcd of two numbers. 	L1,L3	10

xii. Write a shell script to concatenate two strings and find the length of the resultant string.

DIGITAL ELECTRONICS LAB

Course Code: CSE2315

Credit Units: 01

List of Experiments:

1. To verify the truth tables of OR, AND, NOR, NAND, EX-OR, EX-NOR gates.
2. To obtain half adder, full adder and subtractor using gates and verify their truth tables.
3. To verify the truth tables of RS, JK and D flip- flops.
4. To design and study a binary counter.
5. To design and study synchronous counter.
6. To design and study ripple counter.
7. To convert BCD number into excess 3 form
8. To design and study a decade counter.
9. To design and study a sequence detector.
10. To implement control circuit using multiplexer.

CSE2310	ELECTRONIC DEVICES & CIRCUITS	L	T	P	C
Version:2017.1	Date of Approval: 14 th June 2017	3	0	0	3
Pre-requisites/Exposure	Elementary Resistive Circuit, Theorems and Analysis Techniques: KCL, KVL, Nodal & Mesh Analysis, Thevenin & Norton Equivalents, Maximum Power Transfer.				
Co-requisites	Semiconductor Physics				

Catalog Description

This is the first course in Electronics and Communication Engineering, to educate and explain the methods used for biasing circuits in a graphical analysis of non-linear electronic circuits and also includes small signal transistor models, parameters and their frequency responses. Following this, analyzing different types of feedback amplifiers, and power amplifiers using transistor and designing of different electronic circuits are included in the course. This course also considers the mathematical modeling of active solid state devices their analysis and design of single state circuits. Topics covered include the study of device characteristics and applications of p-n-junction diodes, bipolar junction transistors, and field effect transistors.

Course Objectives

The objective of this course is to

1. build from basic knowledge of Semiconductor Physics to an understanding of basic devices and their models
2. familiarize the student with the analysis and design of basic transistor amplifier circuits, feedback amplifiers and wave shaping circuits
3. build a foundation for Analog Electronics-II, Digital Circuits and Systems I & II, VLSI design and analog CMOS IC Design.

Course Outcomes

On completion of this course, the students will be able to

- CO1. explain different types of diodes and demonstrate wave shaping circuits
- CO2. explain operating principal of Bipolar Junction Transistor, its properties, biasing techniques and stability
- CO3. describe low and high frequency transistor amplifiers along with single and multi-stage amplifier
- CO4. explain operating principal of JFET, MOSFET, its properties, and biasing techniques
- CO5. solve and analyse different negative feedback amplifiers configurations
- CO6. describe and outline power amplifiers and their application.

Modules	Blooms level*	Number of hours
Module I: Semiconductor Diode and Diode Circuits Different types of diodes: Zener, Schottky, LED. Zener as voltage regulator, Diffusion capacitance, Drift capacitance, the load line concept, half wave, full wave rectifiers, clipping and clamping circuits.	L1 L2 & L3	6
Module II: Bipolar Junction Transistor Bipolar junction transistor: Introduction, Transistor, construction, transistor operations, BJT characteristics, load line, operating point, leakage currents, saturation and cut off mode of operations. Bias	L1 L2 & L3	9

stabilization: Need for stabilization, fixed Bias, emitter bias, self bias, bias stability with respect to variations in I_{co} , V_{BE} & β , Stabilization factors, thermal stability.		
Module III: Small signal Analysis of transistor and Multistage Amplifier Hybrid model for transistors at low frequencies, Analysis of transistor amplifier using h parameters, emitter follower, Miller's theorem, THE CE amplifier with an emitter resistance, Hybrid π model, Hybrid π Conducances and Capacitances, CE short circuit current gain, CE short circuit current gain with R_L Multistage amplifier: Cascading of Amplifiers, Coupling schemes(RC coupling and Transformer coupling)	L2 & L3	6
Module IV: Field Effect Transistors Field effect transistor (JFET, MOSFET): volt-ampere characteristics, small signal model –common drain, common source, common gate, operating point, MOSFET, enhancement and -depletion mode, Common source amplifier, Source follower	L1, L2 & L3	5
Module V: Feedback Amplifiers Feedback concept, Classification of Feedback amplifiers, Properties of negative Feedback amplifiers, Impedance considerations in different Configurations, Examples of analysis of feedback Amplifiers.	L1, L2, L3 & L4	6
Module VI: Power amplifiers Power dissipation in transistors, difference with voltage amplifiers, Amplifier classification (Class A, Class B, Class C, Class AB) class AB push pull amplifier, collector efficiency of each, cross over distortion.	L1 & L2	4

ELECTRONIC DEVICES & CIRCUITS LAB

Course Code: CSE2311

Credit Units: 01

Course Contents:

1. To study and plot the characteristics of a junction diode.
2. To study Zener diode as a voltage regulator.
3. To study diode based clipping and clamping circuits.
4. To study half wave, full wave and bridge rectifier with filters.
5. To study the input and output characteristics of a transistor in its various configurations.
6. To study and plot the characteristics of a JFET in its various configurations.
7. To study and plot the characteristics of a MOSFET in its various configurations.
8. To study various types of Bias Stabilization for a transistor.
9. To study the gain and plot the frequency response of a single stage transistor amplifier.
10. To measure gain and plot the frequency response of double stage RC coupled amplifier.

Examination Scheme:

CSE2312	E-COMMERCE AND ERP	L	T	P	C
Version 2017.1	Date of Approval:14, June 2017	3	1	0	4
Pre-requisites/Exposure	Knowledge of basic computer				
Co-requisites	Nil				

Catalog Description

This course examines the evolution of enterprise resource planning (ERP) systems - from internally focused client/server systems to externally focused e-business. This class studies the types of issues that managers will need to consider in implementing cross-functional integrated ERP systems. The objective of this course is to make students aware of the potential and limitations of ERP systems. This objective will be reached through hands-on experience, case studies, lectures, guest speakers and a group project. The course would equip students with the basics of E-Commerce, technologies involved with it and various issues associated with.

Course Objectives

The objective of this course is to

1. Understand the students with the role of consultants, vendors and employees.
2. Provide an overview of various phases in ERP implementation and identify various technologies used in ERP.

Course Outcomes

On completion of this course, the students will be able to

- CO1: Describe the key features of Internet, Intranets and Extranets and explain how they relate to each other. Demonstrate an understanding of the foundations and importance of E-commerce and assess electronic payment systems.
- CO2: Understand concepts of reengineering, data mining, data warehousing and how they relate to ERP system implementations.
- CO3: Explain the challenges associated with implementing enterprise systems and their impacts on organizations.
- CO4: Describe the selection, acquisition and implementation of enterprise systems and demonstrate an ability to work independently and in a group.
- CO5: Identify and describe typical functionality in an ERP system.
- CO6: Analyze the strategic options for ERP identification and adoption.

Modules	Blooms level*	Number of hours
MODULE 1: INTRODUCTION AND CONCEPTS: Networks and commercial transactions - Internet and other novelties; Networks and electronic transactions today, Model for commercial transactions; Internet environment - internet advantage, world wide web and other internet sales venues; Online commerce solutions. Security Technologies: Why is internet insecure? A brief introduction to Cryptography; Public key solution. Digital payment systems; First virtual internet payment system; cyber cash model Operational process of Digicash, Ecash Trail; Using Ecash; Smart cards; Electronic Data Interchange: Its basics; EDI versus Internet and EDI over Internet.	L1, L2 and L3	8

MODULE 2: INTRODUCTION ERP An Overview, Enterprise-An Overview, Benefits of ERP, ERP and Related Technologies, Business Process Reengineering (BPR), Data Warehousing, Data Mining, On-line Analytical Processing (OLAP), Supply Chain Management, Management Information systems (MIS), Decision support system (DSS), Executive Information systems (EIS). ERP – A Manufacturing Perspective Materials Requirement Planning (MRP), Bill of Material (Bom), Distribution Requirements Planning (DRP), JIT & Kanban, CAD/CAM, Product Data Management (PDM), Benefits of PDM, MTO, MTS, ATO, ETO, CTO.	L1,L2 and L3	10
MODULE 3: ERP IMPLEMENTATION To be or not to be, ERP Implementation Lifecycle, Implementation Methodology, Not all Packages are Created Equal!, ERP Implementation-The Hidden Costs, Organizing the Implementation, Vendors, Consultants and Users, Contracts with Vendors, Consultants and Employees, Project Management and Monitoring, After ERP Implementation.	L1,L2 and L3	8
MODULE 4: THE BUSINESS MODULES Business Modules in an ERP Package, Finance, Manufacturing (Production), Human Resources, Plant Maintenance, Materials Management, Quality Management, Sales and Distribution	L1,L2 and L3	8
MODULE 5: THE ERP MARKET ERP Market Place, SAP AG, PeopleSoft, Baan Company, JD Edwards World Solutions Company, Oracle Corporation, QAD, System Software Associates, Inc (SSA) ERP-Present and Future Turbo Charge the ERP System, Enterprise Integration Applications (EIA), ERP and E-Commerce, ERP and Internet, Future Directions in ERP, Appendices"	L2, L3 and L4	8
MODULE 6: BENEFITS OF ERP Time Reduction, Resource Utilization, Performance, Customer Satisfaction, Flexibility, Quality, Accuracy.	L1,L2 and L3	6

**Bloom's Level:*

CSE2412	ARTIFICIAL INTELLIGENCE	L	T	P	C
Version 2017.1	Date of Approval: 14, June 2017	3	0	0	3
Pre-requisites/Exposure	Exposure to data structure and programming and an ability to discuss algorithms is the only pre-requisite.				
Co-requisites	Nil				

Catalog Description

Introduction to computational models of thought and construction of intelligent information systems. Topics include search algorithms, data dependencies and truth-maintenance systems, approaches to knowledge representation, automated deduction, reasoning under uncertainty, and machine learning. The field of Robotics is a multi-disciplinary as robots are amazingly complex system comprising mechanical, electrical, electronic H/W and S/W and issues germane to all these.

Course Objectives

The objective of this course is to

1. Provide an overview of problem solving skills methods using Artificial Intelligence.
2. Equip the students with the study of programming languages that is used to develop an Intelligence System.

Course Outcomes

On completion of this course, the students will be able to

- CO1: Explain how Artificial Intelligence enables capabilities that are beyond conventional technology, for example, chess-playing computers, self-driving cars, robotic vacuum cleaners and Understand the various searching techniques.
- CO2: Attain the capability to represent various real life problem domains using logic based techniques and use this to perform inference or planning.
- CO3: Acquire the knowledge of real world Knowledge representation. Apply concept Natural Language processing to problems leading to understanding of cognitive computing.
- CO4: Use different machine learning techniques to design AI machine and Write algorithms and implement programs in 'Prolog' language.
- CO5: Explain some of the more advanced topics of AI such as Robotics and Explain what constitutes "Artificial" Intelligence and how to identify systems with Artificial Intelligence.

Modules	Blooms level*	Number of hours
MODULE 1: PROBLEM SOLVING AND SCOPE OF AI Introduction to Artificial Intelligence. Applications- Games, theorem proving, natural language processing, vision and speech processing, robotics, expert systems. AI techniques- search knowledge, abstraction. PROBLEM SOLVING State space search; Production systems, search space control: depth-first, breadth-first search. Heuristic search - Hill climbing, best-first search, branch and bound. Problem Reduction, Constraint Satisfaction End, Means-End Analysis. LA* Algorithm, L(AO*) Algorithm.	L1, L2, L3 and L4	10
MODULE 2: KNOWLEDGE REPRESENTATION Knowledge Representation issues, first order predicate calculus, Horn Clauses, Resolution, Semantic Nets, Frames, Partitioned Nets, Procedural Vs Declarative knowledge, Forward Vs Backward Reasoning.	L1, L2 and L4	6
MODULE 3: UNDERSTANDING NATURAL LANGUAGES Introduction to NLP, Basics of Syntactic Processing, Basics of Semantic Analysis, Basics of Parsing techniques, context free and transformational grammars, transition nets, augmented transition nets, Shanks Conceptual Dependency, Scripts, Basics of grammar free analyzers, Basics of sentence generation, and Basics of translation.	L1, L2 and L4	7
MODULE 4: EXPERT SYSTEM Need and justification for expert systems, knowledge acquisition, Case studies: MYCIN, R1 LEARNING Concept of learning, learning automation, genetic algorithm, learning by inductions, neural nets. Programming Language: Introduction to programming Language, LISP and PROLOG. HANDLING UNCERTAINTIES Non-monotonic reasoning, Probabilistic reasoning, use of certainty factors, Fuzzy logic.	L1, L2, L4 and L5	7
MODULE 5: INTRODUCTION TO ROBOTICS Fundamentals of Robotics, Robot Kinematics: Position Analysis, Dynamic Analysis and Forces, Robot Programming languages & systems: Introduction, the three levels of robot programming, requirements of a robot programming language, problems peculiar to robot programming languages.	L1, L2 and L3	6

CSE2413	ARTIFICIAL INTELLIGENCE LAB	L	T	P	C
Version2017.1	Date of Approval: 14, June 2017	0	0	2	1
Pre-requisites/Exposure	Basic Concepts of C and C++				
Co-requisites	Nil				

Catalog Description

PROLOG programs tell the computer what to do (declarative programming) rather than how to do it (procedural programming). PROLOG does this by making deductions and derivations, instigated by user-defined queries, from facts and rules stored in a database. The module teaches PROLOG as a practical programming tool, useful in solving various interesting problems especially in the Artificial Intelligence domain.

Course Objectives

The objective of this course is to

1. Provide an overview of a programming paradigm: programming by means of logic (also known as logic programming)
2. Provide an experience with development of AI application using PROLOG.

Course Outcomes

On completion of this course, the students will be able to

CO1: Use the basic knowledge of PROLOG programming in order to write simple PROLOG programs and explore more sophisticated PROLOG code on their own.

CO2: Use Prolog for developing artificial intelligence applications.

Modules/Topics Covered**	Blooms level*	Number of hours
1: INTRODUCTION TO PROLOG- SIMPLE FACTS, FACTS WITH ARGUMENTS. PROBLEM STATEMENT 1: <ul style="list-style-type: none"> • Convert the following into Prolog Equivalent: It is raining. This is a book. PROBLEM STATEMENT 2: <ul style="list-style-type: none"> • Convert the following into Prolog Equivalent: 1. The cakes are delicious. 2. Priya relishes coffee. 3. Edwin plays badminton. 	L1 and L3	4
2: DEFINING VARIABLES, MATCHING AND BACKTRACKING. PROBLEM STATEMENT 3: <ul style="list-style-type: none"> • Convert the sentences into Prolog Equivalent and answer the following questions: 1. Sun rises in east. 2. Dovey is a good girl. 3. Dora likes books. 4. Chin is an intelligent student? Query 1: Who is a good girl? Query 2: Dora likes What?	L1, L3 and L5	4

PROBLEM STATEMENT 4: <ul style="list-style-type: none"> Consider the following facts: <ol style="list-style-type: none"> parent (pam, bob). parent (tom, bob). parent (bob, ann). parent (tom, liz). <p>Query: Who is the parent of Whom? Or Find X and Y such that X is the parent of Y.</p>		
3: RULES. PROBLEM STATEMENT 5: <ul style="list-style-type: none"> Consider the given knowledge. Represent the knowledge into the PROLOG equivalence and answer the question using rules. <p>Joy is father of Jay. Jay is father of Sam. Sam is brother of Sue. Alvin is father of Ali. Sim is mother of Sam. Sis is mother of Alvin.</p> <p>Question: Who are Sue's parent?</p>	L1, L3 and L5	2
4: INPUT AND OUTPUT PREDICATES. PROBLEM STATEMENT 6: <ul style="list-style-type: none"> Write a code to print a message on the screen. Write a program to perform addition of two numbers. 	L1 and L3	2
5: CONTROL STRUCTURES AND RECURSION. PROBLEM STATEMENT 7: <ul style="list-style-type: none"> Write a code in PROLOG to design a calculator. PROBLEM STATEMENT 8: <ul style="list-style-type: none"> Write a code in PROLOG to find the largest number among two numbers. Write a code in PROLOG to find the largest number among three numbers. PROBLEM STATEMENT 9: <ul style="list-style-type: none"> Write a code in PROLOG to find the factorial of a number. PROBLEM STATEMENT 10: <ul style="list-style-type: none"> Write a code in PROLOG to print the Fibonacci series. 	L1, L3 and L5	8
6: Data Structure and Operations. PROBLEM STATEMENT 11: <ul style="list-style-type: none"> Create a LIST of 10 elements and print Head and Tail. Write a code in PROLOG to concatenate two strings. PROBLEM STATEMENT 12: <ul style="list-style-type: none"> Write a code in PROLOG to search an item from a given LIST. 	L1 and L3	4

CSE2420	DATA COMMUNICATION AND COMPUTER NETWORKS LAB	L	T	P	C
Version 2019.1	Date of Approval: 15 May, 2019	0	0	2	1
Pre-requisites/Exposure					
Co-requisites	Nil				

Catalog Description

The objective is to acquaint the students with the basics of data communication and networking. A structured approach to explain how networks work from the inside out is being covered. The physical layer of networking, computer hardware and transmission systems have been explained. In-depth application coverage includes email, the domain name system; the World Wide Web (both client- and server-side), routing protocols and data link layer protocols.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of data communication and networking.
2. Provide an overview of various protocols and their configurations using networking devices and servers.

Course Outcomes

On completion of this course, the students will be able to

CO1: Demonstrate the use of Command Line Interface (CLI) and other features and Cisco Packet Tracer; describe and distinguish networking devices and transmission media.

CO2: Apply various application layer protocols capability on server device including DNS, DHCP, HTTP, SMTP and POP.

CO3: Construct network topology and operate routing protocols (RIP, OSPF and EIGRP) for end-to-end connectivity.

CO4: Illustrate the use of data link protocols-HDLC and PPP; determine network connectivity issues and fix them.

Modules	Blooms level*	Number of hours
LABORATORY SESSION 1 THE PHYSICAL LAYER <ul style="list-style-type: none"> • Introduction to different types of transmission media and cables. • Introduction to various networking devices and equipment. • Construct network topology and understand configuration of devices using Cisco Packet Tracer (tool). 	L2, L3	6
LABORATORY SESSION 2 THE APPLICATION LAYER <ol style="list-style-type: none"> 1. Configuration of Domain Name System (DNS) server using Cisco Packet Tracer. 2. Configuration of Dynamic Host Configuration Protocol (DHCP) server using Cisco Packet Tracer. 3. Configuration of mail server using Cisco Packet Tracer. 4. Configuration of web server using Cisco Packet Tracer. 	L3	6

LABORATORY SESSION 3 THE NETWORK LAYER 1. Configure Routing Information Protocol (RIP) using Cisco Packet Tracer. 2. Configure Open Shortest Path First (OSPF) routing protocol using Cisco Packet Tracer. 3. Configure Enhanced Interior Gateway Routing Protocol (EIGRP) using Cisco Packet Tracer.	L3	6
LABORATORY SESSION 4 DATA LINK LAYER 1. Configure and Analyse the working of data link control protocols-HDLC and PPP access. 2. Configure PPP security protocols-PAP and CHAP using Cisco Packet Tracer. 3. Determine various issues in network connectivity and communication using troubleshooting commands.	L3,L4	6

CSE2410	ARTIFICIAL NEURAL NETWORK	L	T	P	C
Version 2017.1	Date of Approval: 14 th June 2017	2	-	1	2
Pre-requisites/Exposure	Basic Knowledge of Brain functioning				
Co-requisites	Nil				

Catalog Description

The course provides introduction to neural network and a deep insight into the basics of brain & its functioning basics of various neural models & neural schema used for learning. With this course students would be able to know the basics of each introductory feature of human brain and its features which would prove to be very helpful throughout their degree and would prove helpful in understanding other related subjects also.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of learning of brain problem solving techniques and develop proficiency in creating neural structures using the MATLAB.
2. Provide an overview of various control statements, data structures, packages related to image addition, graphics, different types of neural models.

Course Outcome

On completion of this course, the students will be able to

CO 1: Define Artificial Neural Network & its similarity to biological neural network and explain its application in our day to day life.

CO 2: Analyze ANN learning, Error correction learning, Hebbian learning, Competitive learning and Boltzman Learning.

CO 3: Implement simple perceptron, Perceptron Learning rule, modified perceptron learning rule, feed forward neural network & feedback Neural Network.

CO 4: Explain self-organizing Map, Hopfield network, Adaptive resonance theory and its various learning rules.

CO 5: Analyze memory-based learning, Associative learning, Bi-directional learning and Auto associative learning.

Modules	Blooms level*	Number of hours
Module-I Artificial Neural Networks (ANN) and biological neural networks, supervised and unsupervised learning rules, neural network applications	L1, L2 and L3	6
Module-II Unsupervised learning:- Hebbian learning and competitive learning. Supervised learning:- Back propagation algorithms, Learning rule:- Delta learning rule, Widrow-Hoff learning rule, Winner-Take-All learning rule	L1, L2 and L3	6
Module-III Feed forward neural network, feed backward neural network, Perceptron and its learning law, single-layer perceptron, multi-layer perceptron.	L2, L3 and L4	6

Module-IV Self-organizing networks: Kohonen algorithm, Hopfield Networks: Hopfield network algorithm, Adaptive resonance theory: Network and learning rules.	L2, L3 and L4	6
Module V Associative memory, auto-associative memory, bi-directional associative memory.	L2, L3 and L4	6

CSE2411	ARTIFICIAL NEURAL NETWORK LAB	L	T	P	C
Version 2017.1	Date of Approval: 14 th June 2017	0	0	1	1
Pre-requisites/Exposure	Basics of MATLAB				
Co-requisites	NIL				

Catalog Description

In this Lab course first student should learn about advanced level of software used for easy calculation and toolbox used for software like MATLAB.

Course Objectives

The objective of this course is to

1. Make the students apply knowledge of various neural models required for solving complex problems.
2. Provide a demonstration of different types of image processing techniques through MATLAB toolbox.

Course Outcomes

On completion of this course, the students will be able to

CO1: Acquiring knowledge of Basics of High-end calculation software and need in Computer Science & engineering

CO2: Demonstrate the All preliminary functions in MATLAB

CO3: Apply the knowledge of all the basics function and toolbox knowledge of MATLAB

CO4: Demonstrate the Neural Network model in MATLAB

CO5: Demonstrate usage of applications involving with Image processing & Its Toolbox used by MATLAB

Modules/Topics Covered**	Blooms level*	Number of hours
1. Introduction of MATLAB (a) Basic Variable declaration & its operation (b) Function use & its application	L3, L5	4
2. Sample Programs in MATLAB (a) Basic use of Matrix and Graph Plotting (b) Different type of graph plotting with use of different -2 type of data	L3, L5	6
3. Sample Programs using MATLAB functions (a) Create a basic program MATLAB using functions (b) Use of basic function Image processing (c) Practice on Basic function of Image processing tool box.	L3, L5	6
4. Sample programs of ANN functions (a) Practice on ANN toolbox function in MATLAB (b) Write a program for training a small network in MATLAB	L3, L5	6
5. Sample Programs using ANN tool box & Image processing toolbox (a) Demonstrate the use of ANN tool box & Image processing toolbox and write a program after combining it.	L3, L5	2

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

**** Sample Programs provided are not limited to these only, can include others as desired.**

CSE2414	COMMUNICATION SYSTEM	L	T	P	C
Version 2017.1	Date of Approval: 14 July 2017	3	0	0	3
Pre-requisites/Exposure	Signal and System				
Co-requisites					

Catalog Description

The purpose of this course is to introduce students to the basic principles of the design and analysis of modern communication systems. It will provide a thorough study of both analog and digital modulation and demodulation schemes. The performance analysis of various techniques based on requirements of noise and bandwidth will also be explained. It also introduces the students to the information theory and coding for basic understanding of mobile communication system.

Course Objectives

The objective of this course is to

1. Provide a thorough introduction to analog and digital communications
2. Provide in depth study of various modulation and demodulation techniques.
3. Introduce students to basics of information theory and coding for applications in mobile communication.

Course Outcomes

On completion of this course, the students will be able to

CO1. Define and Distinguish analog and digital communication systems.

CO2. Differentiate modulation and demodulation techniques of AM and FM systems and compare them in terms of Bandwidth and noise.

CO3. Distinguish and categorize various digital modulation techniques.

CO4. Describe Information theory and coding for applications in mobile communication system by solving different encoding problems.

Modules	Blooms level*	Number of hours
MODULE I: INTRODUCTION Communication Process, Source of Information, base-band and pass-band signals, Review of Fourier transforms, Random variables, different types of PDF, need of modulation process, analog versus digital communications	L1 and L2	4
MODULE II: AMPLITUDE MODULATION Amplitude modulation with full carrier, suppressed carrier systems, single side band transmission, switching modulators, synchronous detection, envelope detection, effect of frequency and phase errors in synchronous detection, comparison of various AM systems, vestigial side band transmission.	L1, L2, L3 and L4	8
MODULE III: ANGLE MODULATION	L1, L2, L3 and L4	9

Narrow and wide band FM, BW calculations using Carson rule, Direct & Indirect FM generations, phase modulation, Demodulation of FM signals, noise reduction using pre & de-emphasis.		
MODULE IV: PULSE MODULATION Pulse amplitude, width & position modulation, generation & detection of PAM, PWM & PPM, Comparison of frequency division and time division multiplexed systems. Basics of Digital Communications: ASK, PSK, FSK, QPSK basics & waveform with brief mathematical introduction	L1, L2, L3 and L4	6
MODULE V: NOISE Different types of noise, noise calculations, equivalent noise band width, noise figures, effective noise temperature, noise figure.	L1 and L2	4
MODULE VI: INTRODUCTION TO INFORMATION THEORY Measurement of Information, mutual, Shannon's theorem, Source coding, channel coding and channel capacity theorem, Huffman code	L1, L2 and L3	5

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5:Synthesis, L6:Evaluation

COMMUNICATION SYSTEMS LAB

Course Code: CSE2415

Credit Units: 01

List of Experiments:

1. To study the sampling and reconstruction of a given signal.
2. To study amplitude modulation and demodulation.
3. To study frequency modulation and demodulation.
4. To study time division multiplexing.
5. To study pulse amplitude modulation.
6. To study delta and adaptive delta modulation and demodulation.
7. To study carrier modulation techniques using amplitude shift keying and Frequency shift keying.
8. To study carrier modulation techniques using binary phase shift keying and differential shift keying.
9. To study pulse code modulation & differential pulse code modulation as well as relevant demodulations.
10. To study quadrature phase shift keying & quadrature amplitude modulation.

CSE2422	WEB DESIGNING TECHNOLOGIES	L	T	P	C
Version: 2019.1	Date of Approval: 15 May 2019	2	0	2	3
Pre-requisites/Exposure	knowledge of Internet fundamentals				
Co-requisites	NIL				

Catalog Description

The objective of this course is to introduce the basic concepts of HTML5 and CSS3. To explore and implement the various concepts of website design using HTML with the concept of the tags, script, and code that create web pages. To understand how the web and web pages work and web pages styles using CSS3. After completing this course students can easily develop static web sites and style them using CSS3.

Course Objectives

The objective of this course is

1. Understand the advanced features of HTML5 which includes images, links, tables, frames and forms etc and gives an overview of CSS3 which is used to add style to the web pages.
2. Demonstrate the application of HTML5 in developing solutions to web site creation and understanding how CSS will affect web page creation.
3. Design a responsive web site using HTML5 and CSS3.

Course Outcomes

On completion of this course, the students will be able to

CO 1: Explain the basic concepts of HTML, structure of HTML. Apply the different tags for images, hypertext and lists in web pages.

CO 2: Illustrate the different ways to use styles in web pages using CSS? Apply CSS style sheets for formatting text in web pages.

CO 3: Explain the layout of CSS style and describe how to add audio and video in html web pages.

CO 4: Demonstrate the use of Table and frames in web pages and setting properties for tables and frames.

CO 5: Explain the writing scripts in web pages and publishing Webpages on web.

Modules	Blooms level*	Number of hours
Module I History of HTML, Basic HTML Structure, Creating title, Creating header and footer, Adding Comments, Formatting Text, Specifying time, Indicating citations/references, quotes, abbreviations, pre-formatted text, Inserting Images, Creating Image Links, Scaling images with the browser, setting icons for web page, Creating hypertext, anchor tag, Creating List, Creating Definition List, Creating Hyper Text Links, Creating Link Lists.	L2 and L3	8

Module II CSS building blocks, working with style sheets, Creating different types of style sheets- External , embedded and inline style sheets, defining selectors , Selecting on basis of class and id, selecting elements based on the attributes, combining selectors, Formatting text with styles, setting font properties.	L3 and L4	7
Module III CSS: Layout with style, changing the background color, setting border, changing the cursor, style sheets for mobile to desktop, working with web fonts, creating forms, organizing the form elements. Adding audio , video and other multi-media .	L2 and L3	7
Module IV Tables and frames, Creating Tables, Table Element, Adding Border, Adding Column Headings, Adding Spacing and Padding, Adding a Caption, Setting the table Width and Height, Add Row Headings, Aligning Cell contents, Setting Column Width, Centering a Table, Inserting and Image, Spanning Columns, Spanning Rows Assigning Background Colors, Frame Elements, Creation of Frame Based Pages.	L3	7
Module V: Working with scripts : Loading an external script, testing & debugging web pages, publishing your web page on the web.	L2	7

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

CSE2502	COMPUTER ARCHITECTURE	L	T	P	C
Version 2017.1	Date of Approval: 14 th June 2017	3	1	0	4
Pre-requisites/Exposure	Logic Gates				
Co-requisites	nil				

Catalog Description

Computer architecture is concerned with the structure and behavior of the various functional modules of the computer and how they interact to provide the processing needs of the user. It includes basic register transfer language and computer organization and design. Complete insight on the working of CPU, Memory and I/O communication will be provided. Pipelining and related topics will also be discussed.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of computer architectures and their modules.
2. Provide an overview of various algorithms used and hardware implementation computer.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Explain about Register transfer language and various micro operations of arithmetic logic unit.
- CO2. Explain about the organization of computer modules and their details.
- CO3. Explain in details of central processing unit like general purpose register, accumulator etc. and computer arithmetic.
- CO4. Explain memory organization of computer and their interconnections. Details of direct memory access.
- CO5. Explain parallel processing and pipeline techniques.

Modules	Blooms level*	Number of hours
Module I: Register Transfer Language Register Transfer, Bus and Memory Transfers, Arithmetic Micro-operations, Logic Micro-operations, Shift Micro-operations, Arithmetic Logic shift Unit.	L1, L2 and L3	10
Module II: Basic Computer Organizations and Design Instruction Codes, Computer Registers, Computer Instructions, Timing and Control, Instruction Cycle, Memory-Reference Instructions, Input-Output and Interrupt, Design of Accumulator Logic. Hardwired and Microprogrammed control: Control Memory, Address Sequencing, Design of Control Unit	L1,L2	9
Module III: Central Processing Unit Introduction, General Register Organization, Stack Organization, Instruction representation, Instruction Formats, Instruction type, Addressing Modes, Data Transfer and Manipulation, Program Control, Reduced Instruction Set Computer RISC and CISC Computer Arithmetic: Introduction, Addition and Subtraction Algorithm, Multiplication Algorithms, Booth Multiplication, Division Algorithms, Floating-Point Arithmetic Operations	L1,L2, L3	10

Module IV: Memory and Intersystem Communication and Input output organisation Memory: Memory types and organization Memory Hierarchy, Main Memory, Auxiliary Memory, Associative Memory, Cache Memory with mapping techniques, Virtual Memory, Memory Management Hardware Intrasystem communication and I/O: Peripheral Devices, Input-Output Controller and I/O driver, IDE for hard disk, I/O port and Bus concept, Bus cycle, Synchronous and asynchronous transfer, Modes of Transfer, DMA, DMA Transfer, DMA Controller, I/O Processor, CPU-IOP Communication	L1,L2, L3.	10
Module V: Pipelining, Vector Processing and Multiprocessors Parallel Processing, Pipelining, Arithmetic Pipeline, Instruction Pipeline, RISC Pipeline Multiprocessors: Characteristics of Multiprocessors	L1 and L2	9

CSE2503	JAVA PROGRAMMING	L	T	P	C
Version 2017.1	Date of Approval: 14 th June 2017	3	0	0	3
Pre-requisites/Exposure	Basics of Programming				
Co-requisites	NIL				

Catalog Description

The objective is to impart programming skills used in this object-oriented language java. The course explores all the basic concepts of core java programming like object, classes, data types, features, operators, control structures, interfaces, packages, applets, awt, swings and socket programming. The students are expected to learn it enough so that they can develop the basic applications as well as web solutions like creating applets etc.

Course Objectives

The objective of this course is to

1. Equip the students with the basic feature of contemporary java required in solving complex problems.
2. Provide a practical knowhow and implementation of java programming concepts like classes, objects, packages, swings, socket programming.

Course Outcomes

On completion of this course, the students will be able to

- CO1: Define and explain concept of byte code and platform independence, demonstrate basic java-based application development using operators, if-else, loops and arrays.
- CO2: Distinguish between various types of inheritances, polymorphisms and other concepts and able to solve complex programming problems involving class objects, inheritances, and packages.
- CO3: Describe hierarchy of exception classes and thread life cycle along with demonstrate and design solutions for some simple and complex applications using exception and multithreading concepts.
- CO4: Explain event delegation model and describe AWT class hierarchy; Apply knowledge of event handling and AWT controls create some new dynamic graphical applications.
- CO5: Explain the architecture of applet and concept of swing package. Demonstrate applications based on java applets and swings.

Modules	Blooms level*	Number of hours
Module I: Java Basics Concepts of OOP, Features of Java, How Java is different from C++, Environmental setup, Basic syntax, Objects and classes, Basic Data Types, Variable Types, Modifier Types, Basic operators, Loop Control, Decision Making, Strings and Arrays, Methods, I/O.	L1, L2 and L3	6
Module II: Java Object Oriented Inheritance, Overriding, Polymorphism, Abstraction, Encapsulation, Interfaces, Packages, Exploring java.util package.	L2 and L3	7
Module III: Exception Handling and Threading Exception Hierarchy, Exception Methods, Catching Exceptions, Multiple catch Clauses, Uncaught Exceptions Java's Built-in	L2, L3 and L5	8

Exception. Creating, Implementing and Extending thread, thread priorities, synchronization suspending, resuming and stopping Threads, Multi-threading.		
Module IV: Event Handling And AWT Event handling Mechanism, Event Model, Event Classes, Sources of Events, Event Listener Interfaces, AWT: Working with Windows, AWT Controls, Layout Managers	L2, L3, L4 and L5	8
Module V: Java Advanced Applet Class, Architecture, Skeleton, Display Methods. Swings: Japplet, Icons, labels, Text Fields, Buttons, Combo Boxes. Socket Programming: Socket methods, Server Socket methods, Socket Client and Socket Server examples.	L2 and L3	7

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation

CSE2505	JAVA PROGRAMMING LAB	L	T	P	C
Version 2017.1	Date of Approval: 14 th June 2017	0	0	2	1
Pre-requisites/Exposure	Basics of Programming				
Co-requisites	NIL				

Catalog Description

In this Lab course the basic features of contemporary java are implemented and demonstrated. Problems or programs will be related to concepts of classes, objects, threads, packages, exception handling, applets, AWT control, swings and socket programming. Concepts covered would enable them to create basic and complex console and graphical based applications for desktop and Internet

Course Objectives

The objective of this course is to

1. Equip the students to apply knowledge of various basic java features required in solving basic and complex problems.
2. Provide a demonstration of basic java programming concepts like classes, objects, threads, packages, exception handling, applets, AWT control, swings and socket programming

Course Outcomes

On completion of this course, the students will be able to

- CO1: Apply the concepts learned of operators, if-else, loops and arrays to java based application development.
- CO2: Demonstrate the use of various types of inheritances, polymorphisms, class objects, inheritances, packages and other concepts to basic and complex java programming problems.
- CO3: Apply the knowledge of exception handling and multithreading concepts for some simple and complex applications.
- CO4: Apply knowledge of event handling and AWT controls to create some new dynamic graphical applications.
- CO5: Demonstrate graphical applications based on java applets, swings and event handling.

Modules/Topics Covered**	Blooms level*	Number of hours
1. Sample Programs using Objects and classes, Variable Types, Modifier Types, operators, Loops Decision Making, Strings and Arrays, (a) WAP to display "Hello, it's a first program in java". (b) WAP to find sum of two integers taken as input from user at runtime. (c) WAP to find sum of two float numbers taken as command line arguments (d) WAP to find changed case of entered character. (e) WAP to find maximum of 3 integer numbers taken as input from user at runtime. (f) WAP in java to find out the greatest out of ten numbers	L3, L5	6

<p>stored using arrays.</p> <p>(g) WAP to create class with “name” as String and “age” as integer data members. The class should have two methods to take input from user and display the data.</p> <p>(h) WAP to find factorial of a number using class and object.</p>		
<p>2. Sample Programs using Inheritance, Overriding, Polymorphism, Interfaces, Packages</p> <p>a. WAP in java to illustrate the concept of interfaces.</p> <p>b. WAP to create a package as MyPack having a class with three methods: max, fact and show. Use it in other folder with setting classpath and without setting class path.</p> <p>c. Write a program in java to showcase uses of super keyword</p>	L3, L5	4
<p>1. Sample Programs using exception handling and threads</p> <p>a) Write a program to demonstrate the use of nesting of try-catch block</p> <p>b) WAP in java to illustrate the concept of using multiple catch clauses to handle different types of exceptions.</p> <p>c) WAP in java to create a user defined Exception and throw it explicitly.</p> <p>d) Demonstrate thread using Thread class and Runnable interface</p> <p>e) Demonstrate various thread methods using a program</p>	L3, L5	6
<p>(a) Sample Programs using event handling and AWT controls</p> <p>(b) Write a program to display “hello” in different color where user clicks left mouse button and “world” where right mouse button is clicked. Use black background.</p> <p>(c) WAP in java to create a Frame and handle window-closing event implementing the WindowListener interface.</p> <p>(d) WAP to create an Applet having various different buttons, recognizing them using action command string method and handling click event generated by them.</p> <p>(e) WAP to create a frame and illustrate the concept of using an adapter class in place of interfaces for handling various mouse events generated over frame window.</p> <p>(f) WAP in java to create a frame with AWT controls (like label, push buttons, Checkbox, Checkbox Group) and handle various events generated by them.</p> <p>(g) WAP in java to create a frame with various AWT controls (like choice, list, TextField and Buttons) and handle the events thrown by them.</p>	L3, L5	6
<p>5. Sample Programs using applets, swings and stream socket</p> <p>a) . Write an applet which will display “HAPPY” and “DEEPAVALI” as: The word “HAPPY” will roll from top to bottom and “DEEPAVLI” from bottom to “top” . Both will run at the same speed and stop simultaneously at the center of the applet.</p> <p>b) Write an applet to display last 32 shades of red, green and blue in equal sized square grid accompanied by appropriate labels like” Last 32 shades of Red/Green/Blue color”. Make use of BorderLayout to apply border for each individual shade.</p>	L3, L5	2

c) Create an applet with one single button with caption "Click". On clicking the button will open a new Frame with title "Factorial". The frame will have two three controls :TextField, Label and button. On clicking button calculate the factorial entered in TextField control. d) Create Java programs to demonstrate day time client and server e) Create java programs to create echo client and server

CSE2515	MICROPROCESSOR	L	T	P	C
Version 2019.1	Date of Approval: 15 May 2019	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course deals with the systematic study of the architecture and programming issues of 8085-microprocessor family. Explanation of microprocessor in terms of ALP and timing diagrams, Memory System Design & I/O Interfacing, peripheral devices and advance Pentium Processors.

Course Objectives

The objective of this course is to

1. Equip with concepts of microprocessor and interfacing with peripheral devices.
2. Provide an overview of advance microprocessors.

Course Outcomes

On completion of this course, the students will be able to

CO1: Describe the architecture of 8085 microprocessor.

CO2: Describe assembly language programming and show timing diagram for 8085 microprocessors.

CO3: Explain the input output interfacing with peripheral devices and design of memory system for 8085 microprocessors.

CO4: Describe the architecture of 8086 microprocessor and compare with 8085 microprocessors.

CO5: Explain the working principles and architecture of 8087, 80x86 and Pentium processors.

Modules	Blooms level*	Number of hours
Module I: Introduction to Microcomputer Systems Introduction to Microprocessors and microcomputers, Study of 8-bit Microprocessor, 8085 pin configuration, Internal Architecture and operations, interrupts, Stacks and subroutines, various data transfer schemes.	L1 and L2	8
Module II: ALP and timing diagrams Introduction to 8085 instruction set, advance 8085 programming, Addressing modes, Counters and time Delays, Instruction cycle, machine cycle, T-states, timing diagram for 8085 instruction.	L2 and L3	10
Module III: Memory System Design & I/O Interfacing Interfacing with 8085. Interfacing with input/output devices (memory mapped, peripheral I/O), Cache memory system. Study of following peripheral devices 8255, 8253, 8257, 8255, 8251.	L1 and L5	10
Module IV: Architecture of 16-Bit Microprocessor Difference between 8085 and 8086, Block diagram and architecture of	L1 and L2	10

8086 family, pin configuration of 8086, Minimum mode & Maximum mode Operation. Internal architecture of 8086, Bus Interface Unit, Register Organization, Instruction Pointer, Stack & Stack pointer, merits of memory segmentation, Execution Unit, Register Organization.		
Module V: Pentium Processors .Internal architecture of 8087, Operational overview of 8087, Introduction to 80186, 80286, 80386 & 80486 processors, Pentium processor.	L1 and L2	10

MICROPROCESSOR LAB

Course Code: CSE2517

Credit Units: 01

Course Contents:

1. To load the numbers 49H and 53H in the memory location 9510 and 9511
2. respectively and add the contents of memory location 9601
3. To write assembly language programming for 8 bit addition with and without carry.
4. To write assembly language programming for 8 bit subtraction with and without borrow.
5. To write assembly language programming for 8 bit multiplication and division.
6. To write assembly language programming for sorting an array of numbers in ascending and descending order.
7. To write assembly language programming with additional instructions.
8. To write and execute a program using stacks.
9. To study and program the programmable peripheral interface (8255) board.
10. To study and program the programmable interval timer (8253) board.
11. To study and program the programmable DMA controller (8257) board.
12. To study and program the programmable interrupt controller (8259) board.

Examination Scheme:

CSE2535	SUMMER INTERNSHIP EVALUATION-I	L	T	P	C
Version: 2017.1	Date of Approval: 14 th June 2017	0	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The objective of this course is to provide practical training on some live projects that will increase capability to work on actual problem in industry. This training may undergo in an industrial environment or may be an in-house training on some latest software which is in high demand in market. This training will be designed such that it will useful for their future employment in industry.

Course Objectives

The objective of this course is to

1. Provide practical training on live projects
2. Increase technical capabilities on solving real life problems in company environment

Course Outcomes

On completion of this summer internship, the students will be able to:

CO1: Develop communication, interpersonal and other critical skills in the job interview process.

CO2: Design and develop software and hardware projects

CO3: Assess interests and abilities in their field of study.

CO4: Demonstrate excellent technical and communication skills to acquire employment contacts leading directly to a full-time job following graduation from college.

VHDL PROGRAMMING

Course Code: CSE2506

Credit Units: 02

Course Objective:

VHDL is commonly used as a design-entry language for field-programmable gate arrays and application-specific integrated circuits in electronic design automation of digital circuits. The course aims to discuss the syntax of the language to model a digital system.

Course Contents:

Module I

Fundamental VHDL Units, LIBRARY Declarations, ENTITY, ARCHITECTURE, Introductory Examples, Specification of combinational systems using VHDL, Introduction to VHDL, Basic language element of VHDL, Behavioural Modeling, Data flow modeling, Structural modeling, Subprograms and overloading, VHDL description of gates.

Module II

Data Types; Pre-Defined Data Types, User-Defined Data Types, Subtypes, Arrays, Port Array, Records, Signed and Unsigned Data Types, Data Conversion

Module III: Sequential codes

PROCESS: Signals and Variables, IF, WAIT, CASE, LOOP, CASE versus IF, CASE versus WHEN, Bad Clocking, Using Sequential Code to Design Combinational Circuits
Description and design of sequential circuits using VHDL,

Module IV

Standard combinational modules, Design of a Serial Adder with Accumulator, State Graph for Control Network, design of a Binary Multiplier, Multiplication of a Signed Binary Number, Design of a Binary Divider.

Module V

Micro programmed Controller, Structure of a micro programmed controller, Basic component of a micro system, memory subsystem. Overview of PAL, PLA, FPGA, CPLD.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

VHDL PROGRAMMING LAB

Course Code: CSE2507

Credit Units: 01

Software Required: Mentor Graphics

Topics covered in lab will include:

- Designing Basic Gates.
- Designing Combinational circuits like adder, multiplexer, PLA
- Designing Sequential Circuits like flip-flops, counters, registers.

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V

CSE2518	ADVANCED WEB DESIGNING TECHNOLOGIES	L	T	P	C
Version 2019.1	Date of Approval: 15 May 2019	0	0	2	1
Pre-requisites/Exposure	Knowledge of Internet fundamentals				
Co-requisites	NIL				

Catalog Description

This course is aimed to provide a fundamental understanding of JavaScript and two of its related library: Bootstrap and React for dynamic web site client side scripting. Javascript is a famous scripting language for client side. The bootstrap and react libraries are rich API for creating dynamic websites. The course builds strong foundation for client-side scripting for creating dynamic websites

Course Objectives

The objective of this course is

1. Equip the students with basic and advanced features of javascript and bootstrap library to create dynamic web sites
2. Provide an overview of basic features of react library to design dynamic websites.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain basic concepts of java scripts and apply them to create basic scripts

CO2: Explain the fundamentals of client side scripting ,document object model and apply them to create dynamic websites.

CO3: Apply basic APIs of bootstrap library to create dynamic websites

CO4: Demonstrate bootstrap java plugins and its use in designing sample websites.

CO5: Explain and apply react APIs in client side scripting

Modules	Blooms level*	Number of hours
Module 1: Basics Introduction to JavaScript, JavaScript Core Features—Overview, Data Types and Variables, Operators, Expressions, and Statements, Functions, Objects, Array, Date, Math, and Type-Related Objects, Regular Expressions	L2 and L3	8
Module 2: Fundamental of Client-Side JavaScript JavaScript Object Models, The Standard Document Object Model, Event Handling, Controlling Windows and Frames, Handling Documents, Form Handling, Dynamic Effects: Rollovers, Positioning, and Animation, Navigation and Site Visit Improvements, Browser and Capabilities Detection Advanced Topics: JavaScript and Embedded Objects, Remote JavaScript, JavaScript and XML	L2 and L3	7
Module 3: Introduction to Bootstrap (Part 1) Bootstrap Scaffolding: What Is Bootstrap?, Bootstrap File Structure, Basic HTML template, Global Styles Default: Grid System, Basic Grid HTML, Offsetting Columns, Nesting Column, Fluid Grid System, Container Layouts Bootstrap CSS: Typography, Code, Tables, Bootstrap Layout Components: Dropdown Menus, Button Groups, Buttons with Dropdowns,	L2 and L3	7

Navigation Elements, Navbar, Breadcrumbs Pagination, Labels, Badges, Typographic Elements		
Module 4: Introduction to Bootstrap (Part 2) Bootstrap JavaScript Plugins: Overview, Transitions ,Modal ,Dropdown, Scrollspy, Toggleable Tabs, Tooltips, Popover	L2and L3	7
Module 5: The React Library Writing Your First React App, Thinking in React, Server Communication, JSX and the Virtual DOM, Advanced Components, Forms in React.	L2 and L3	7

CSE2604	ADVANCED JAVA PROGRAMMING	L	T	P	C
Version 2017.1	Date of Approval: 14 th June, 2017	3	0	0	3
Pre-requisites/Exposure	Basics of Java Programming				
Co-requisites	NIL				

Catalog Description

In this course the advanced features of contemporary java are discussed in detail. Concepts covered would enable them to handle complex programs relating to managing data and processes over the network. Discussion will be on relating to concepts of remote method invocation to working with swings architecture. Further practical implementation of database connectivity and using them in servlet and jsp based applications will be made.

Course Objectives

The objective of this course is to

1. Equip the students with the advanced feature of contemporary java required in solving complex problems.
2. Provide a practical knowhow and implementation of advanced java programming concepts like database programming with servlets and jsp.

Course Outcomes

On completion of this course, the students will be able to

- CO1: Define and explain concept of an Remote method invocation application, demonstrate swing based application developed using concepts of remote method invocation
- CO2: Distinguish between various java and open database connectivity drivers and able to solve complex programming problems involving database interaction.
- CO3: Describe servlet and its lifecycle, along with demonstrate and design solutions for some complex dynamic web applications using servlets.
- CO4: Explain jsp scripting and Differentiate between processing of servlets and jsp scripting pages. Apply knowledge of servlets and jsp scripting to create some new dynamic web applications.
- CO5: Explain the architecture of Model View Controller and struts. Demonstrate applications based on java beans and struts.

Modules	Blooms level*	Number of hours
MODULE 1: DISTRIBUTED COMPUTING Introduction to Java RMI, RMI services, RMI client, Running client and server, Introduction of Swing, Swing Components, Look and Feel for Swing Components, Introduction to Multimedia Programming.	L1, L2 and L3	6
MODULE 2: DATABASE CONNECTIVITY ODBC and JDBC Drivers, Connecting to Database with the java.sql Package, Using JDBC Terminology, JDBC with mysql, postgresql.	L2 and L3	7
MODULE 3: SERVLET PROGRAMMING Introduction to Servlets, Servlet Life Cycle, Servlet based Applications, Servlet and HTML.Filters, jdbc with servelets, session Management techniques in detail.	L2, L3 and L5	8

MODULE 4: JSP PROGRAMMING JSP: Introduction to JSP, JSP implicit objects, JSP based Applications, Java. Net. Login & Logout Example, jdbc with jsp.	L2, L3, L4 and L5	8
MODULE 5: J2EE WEB APPLICATION The Model-View-Controller Architecture What is Struts, Struts Tags, Creating Beans, Other Bean Tags, Bean Output, Creating HTML Forms, The Action Form class The Action class, Simple Struts: a simple Struts application; Introduction to EJB.	L2 and L3	7

CSE2608	ADVANCED JAVA PROGRAMMING LAB	L	T	P	C
Version 2017.1	Date of Approval: 14 th June, 2017	0	0	2	1
Pre-requisites/Exposure	Basics of Java and Advanced Java Programming				
Co-requisites	NIL				

Catalog Description

In this Lab course the advanced features of contemporary java are implemented and demonstrated. Concepts covered would enable them to create complex applications related to data management. Problems or programs will be related to concepts of remote method invocation, swings, servlets, jsp and java beans.

Course Objectives

The objective of this course is to

1. Make the students apply knowledge of various advanced java features required in solving complex problems.
2. Provide a demonstration of advanced java programming concepts like database programming with servlets, jsp and creating java beans.

Course Outcomes

On completion of this course, the students will be able to

- CO1: Apply the knowledge of swings architecture and remote method invocation used to provide solution to distributed computing problems
- CO2: Demonstrate the use of JDBC connectivity along with swings based architecture, thereby handling data management.
- CO3: Apply the knowledge of servlets and server programming to construct dynamic web applications using web servers.
- CO4: Demonstrate the differences between creating and deploying dynamic web applications using jsp concepts and servlets.
- CO5: Demonstrate usage of applications involving java beans and jdbc programming to handle data management.

Modules/Topics Covered**	Blooms level*	Number of hours
1. Sample Programs using swings architecture and remote method invocation (a) Write a program using swings creating tabbed panes and menu over a frame and handle their associated events (b) Write a program using swings List control containing list of cities, allowing the user to choose any one of them and display using event handing. (c) Demonstrate an application showcasing the use of remote method invocation(RMI) for designing a distributed application. (d) Create an application using concepts of RMI to depict a client server based interaction.	L3, L5	6
2. Sample Programs using JDBC and swings (a) Create an application demonstrating the use of swings, having a menu over a frame and jdbc programming to perform insert and select operations by handling menu related	L3, L5	4

events. (b) Create an application using swings, having a design providing features for iterating over a dataset performing operations like forward, backward, start and end with help of jdbc programming.		
(c) Sample Programs using servlets with jdbc, html and swings 3. Create an application using servlets to perform redirection based on validating user data entered through a web form. 4. Design an application to fetch data from database using servlets and display it using its post method. 5. Demonstrate the process of writing cookies using a servlet and display a message after writing. 6. Write a program to create a session object for the username fetched from user using a servlet, further access that session value on another servlet invoked by redirection.	L3, L5	6
7. Sample Programs using JSP with jdbc, html and swings (a) Write a program using jsp to demonstrate the features of jsp elements used to declare, define and display sum of two integers. (b) Create an application using jsp to calculate and display the greatest out of two integers using if else statements. Integer numbers should be entered using a web form. (c) Demonstrate with a jsp program mechanism to retrieve checkbox data accessed using multiple value parameters fetching approach. (d) Write a program to demonstrate the use of jsp forward action tag used with parameters and processed using another jsp page.	L3, L5	6
8. Sample Programs using jsp, java beans and swings (a) Demonstrate the use of jsp include action tag for including an html and another jsp page in initial jsp resource. (b) Write a program creating Java bean class and setting its properties using required jsp action tags. Output should also display the retrieved property values.	L3, L5	2

**Bloom's Level:*

CSE2613	SOFTWARE ENGINEERING	L	T	P	C
Version 2019.1	Date of Approval: 15 May 2019	3		0	3
Pre-requisites/Exposure	Basic Knowledge of software development				
Co-requisites	Nil				

Catalog Description

In this course the concepts of Software development are discussed in detail. Various models of SDLC are introduced along with its application. Students will be able to apply these concepts in real time software project development.

Course Objectives

The objective of this course is to

1. Gain the knowledge of how Analysis, Design, Implementation, Testing and Maintenance processes are conducted in a software project.
2. Apply their foundations in software engineering to adapt to readily changing environments using the appropriate theory, principles and processes.

Course Outcomes

On completion of this course, the students will be able to

- CO1: Apply current theories, models, and techniques that provide a basis for the software lifecycle.
- CO2: Enable the students to apply a systematic application of scientific knowledge in creating and building cost effective software solutions to business and other types of problems.
- CO3: Be able to elicit, analyze and specify software requirements through a productive working relationship with various stakeholders of a software development.
- CO4: Be able to evaluate the impact of potential solutions to software engineering problems in a global society, using the knowledge of contemporary issues and emerging software engineering trends, models, tools, and techniques.
- CO5: Work as an individual and as part of a multidisciplinary team to design, develop and deliver quality software.

Modules	Blooms level*	Number of hours
MODULE 1: Introduction Software life cycle models: Waterfall, Prototype, Evolutionary and Spiral models, Overview of Quality Standards like ISO 9001, SEI-CMM	L1, L2 and L4	5
MODULE 2: Software Metrics and Project Planning Size Metrics like LOC, Token Count, Function Count, Design Metrics, Data Structure Metrics, Information Flow Metrics. Cost estimation, static, Single and multivariate models, COCOMO model, Putnam Resource Allocation Model, Risk management.	L2, L3 and L6	7

MODULE 3: Software Requirement Analysis, design and coding Problem Analysis, Software Requirement and Specifications, Behavioural and non-behavioural requirements, Software Prototyping Cohesion & Coupling, Classification of Cohesiveness & Coupling, Function Oriented Design, Object Oriented Design, User Interface Design Top-down and bottom-up Structured programming, Information hiding.	L2, L3 and ,L5	8
MODULE 4: Software Reliability, Testing and Maintenance Failure and Faults, Reliability Models: Basic Model, Logarithmic Poisson Model, Software process, Functional testing: Boundary value analysis, Equivalence class testing, Structural testing: path testing, Data flow and mutation testing, unit testing, integration and system testing, Debugging, Testing Tools, & Standards. Management of maintenance, Maintenance Process, Maintenance Models, Reverse Engineering, Software RE-engineering	L2, L3 and L4,L6	10
MODULE 5: UML Introduction to UML, <u>Use Case Diagrams</u> , <u>Class Diagram</u> : <u>State Diagram in UML</u> <u>Activity Diagram in UML</u> <u>Sequence Diagram in UML</u> <u>Collaboration Diagram in UML</u> , Domain, Component Diagram and Deployment Diagram	L3,L4,L5	6

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

CSE2615	SOFTWARE ENGINEERING LAB	L	T	P	C
Version 2017.1	Date of Approval: 15 May 2019	0	0	1	1
Pre-requisites/Exposure	Basics of Software Engineering				
Co-requisites	NIL				

Catalog Description

The course provides introduction to the fundamental's principles of software engineering. The organization broadly based on the classical analysis-design-implementation framework. Software Engineering is the systematic approach to the development, operation, maintenance, and retirement of software. Rational Rose Enterprise Edition software is used to serve the objectives. Students will be able to design models according to user requirement.

Course Objectives

The objective of this course is to

1. The basic objective of Software Engineering is to develop methods and procedures for software development that can scale up for large systems and that can be used to consistently produce high-quality software at low cost and with a small cycle time.
2. Apply basic techniques of modeling computer systems.

Course Outcomes

On completion of this course, the students will be able to

CO1: collect requirements and prepare their scenarios

CO2: Construct various UML models (including use case diagrams, class diagrams, interaction diagrams, state chart diagrams, activity diagrams, and implementation diagrams) using the appropriate notation

CO3: Demonstrate the role and function of each UML model in developing object oriented software.

CO4: Recognize the difference between various object relationships: inheritance, association, whole-part, and dependency relationships.

Modules/Topics Covered**	Blooms level*	Number of hours
1. Introduction to Rational Rose Enterprise Edition tool and SRS (c) Explain features and characteristics of Rational Rose tool along with screenshots. (d) Create Software requirement specification document for Website application of educational institute.	L1, L2	4
2. Concept of UML and Use case diagram (c) Design Use case Diagram of ATM machine (d) Show dependencies and relationships through Use case diagram of Banking Management System	L1, L3	4
3. Class Diagrams and object diagram concepts (d) Design class diagram of Flight Reservation system (e) Design class diagram of student Management system (f) Design object diagram of courier service system (g) Design object diagram of Train Reservation system	L3, L1	8

4. Sequence, Activity, Collaboration, State chart diagram concepts (h) Design Activity diagram of Library Management system (i) Design Sequence diagram of Food Ordering system (j) Design Collaboration diagram of Hotel Management system (k) Design State chart diagram of Turing Machine	L3, L1	8
--	--------	---

CSE2637	MINOR PROJECT- I	L	T	P	C
Version: 2019.1	Date of Approval: 15 May 2019	0	0	0	2
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The objective of this course is to provide practical training on some live/demo projects that will increase capability to work on actual problem in industry. It will be an in house training on some latest software which is in high demand in market. This training will be designed such that it will useful for their future employment in industry.

Course Objectives

The objective of this course is to

1. Provide practical training on live projects
2. Increase technical capabilities on solving real life problems in company environment

Course Outcomes

On completion of this minor project, the students will be able to:

CO1: Demonstrate a sound technical knowledge of their selected project topic.

CO2: Design and develop engineering solutions to complex problems utilising a systems approach.

CO3: Analyse various approaches for solving a complex engineering problem using different tools and techniques

CO4: Demonstrate the knowledge, skills and attitudes of a professional engineer.

CO5: Apply technical skills and knowledge in completing the project.

CSE2614	IOT AND WIRELESS SENSOR NETWORK	L	T	P	C
Version 2019.1	Date of Approval: 15 May 2019	3	0	0	3
Pre-requisites/Exposure	Concept of Networking				
Co-requisites					

Catalog Description

This course provides comprehensive and insight knowledge of Internet of Things and Wireless sensor networks. The objective of the course is to provide the students the core knowledge of architecture, routing protocols, time synchronization and security of IoT along with wireless sensor networks.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of internet-of-things and provide an overview of designing IoT devices.
2. Equip the students with concepts of wireless sensor networks and its architecture.
3. Provide a thorough understanding of routing protocols and power management.
4. Give an insight of time synchronization and network security.

Course Outcomes

On completion of this course, the students will be able to

- CO1: Explain key terms and trends around the Internet of Things along with its physical and logical design.
- CO2: Understand the potential and value of the Internet of Things and Smart Services.
- CO3: Compare and analyze different routing techniques, protocols and power management.
- CO4: Explain problems, fundamentals and protocols of time synchronization and localization.
- CO5: Describe the fundamentals, issues and mechanism of network security.

Modules	Blooms level*	Number of hours
Module 1: Introduction Module I: Introduction to Internet of Things Definition & characteristics of IoT, physical design of IoT-things in IoT, IoT protocols, logical design of IoT- IoT functional block, IoT communication models, IoT communication APIs, IoT enabling technologies-wireless sensor networks, cloud computing, big data analytics, communication protocols, embedded systems, IoT levels and deployment templates, IoT application.	L1, L2 and L4	9
Module 2: Developing Internet of Things IoT Design Methodology, Logical design using Python- Python data types & data structures, control flow, functions, modules, packages, classes, file handling, Python packages for IoTJSON, XML, HTTPLib, URLLib, SMTPLib, IoT end devices-building blocks, Introduction to Raspberry Pi.	L1, L2	6
Module 3: Introduction of WSN and Architectural Framework Motivation for a Network of Wireless Sensor Nodes, Classification of	L1, L2	9

sensor networks, Hardware architecture, Applications: Structural Health Monitoring, Traffic Control, Health Care, Pipeline Monitoring, Precision Agriculture, Active Volcano, Underground Mining Node Architecture: The Sensing Subsystem, the Processor Subsystem, Communication Interfaces, Prototypes. Operating Systems: Functional Aspects, Non-functional Aspects, Prototypes, Evaluation Physical Layer,		
Module 4: Concept of Network Layer and Time Synchronization Basic Components, Source Encoding, Channel Encoding, Modulation Medium Access Control: Wireless MAC Protocols, Characteristics of MAC Protocols in Sensor Networks, Contention-Free MAC Protocols, Contention-Based MAC Protocols, Hybrid MAC Protocols Routing Metrics, Flooding and Gossiping, Data-Centric Routing, Proactive Routing, On-Demand Routing, Hierarchical Routing, Location-Based Routing, Clocks and the Synchronization Problem, Time Synchronization in Wireless Sensor Networks, Basics of Time Synchronization, Time Synchronization Protocols Localization: Ranging Techniques, Range-Based Localization, Range-Free Localization, Event Driven Localization.	L1, L2 and L4	8
Module 5: Security in WSN Fundamentals of Network Security, Challenges of Security in Wireless Sensor Networks , Security Attacks in Sensor Networks, Protocols and Mechanisms for Security, IEEE 802.15.4 and Zig Bee Security	L1, L2	6

**Bloom's Level:*

CSE2610	VLSI DESIGN	L	T	P	C
Version 2017.1	Date of Approval: 14 th June 2017	3	0	0	0
Pre-requisites/Exposure	Basics of semiconductor and analog electronics				
Co-requisites	Nil				

Catalog Description

This course deals with basic theories and techniques of digital VLSI design in CMOS technology. It covers the fundamental concepts and structures of designing digital VLSI systems which include CMOS devices and circuits, standard CMOS fabrication processes, CMOS design rules, static and dynamic logic structures, CMOS chip layout, simulation and testing, low power techniques, design tools and methodologies and Stick Diagrams.

Course Objectives

The objective of this course is to

- Provide a deep understanding of the concepts, techniques and design of complex digital VLSI circuits.
- Apply mathematical methods and circuit analysis models to analyse CMOS digital circuits, and their logic components.

Course Outcomes

On completion of this course, the students will be able to

CO1.Explain the characteristics of Basic VLSI components.

CO2. Apply the knowledge of various CMOS inverters to compare their performance.

CO3. To design and realize basic combinational and sequential functions using CMOS logic.

CO4. Design circuit Layout and Stick diagram of CMOS logics.

Modules	Blooms level*	Number of hours
Module I: Devices and the wire Dynamic and transient behavior of Diode, Diffusion capacitance, SPICE Diode model, MOSFET basic, depletion and enhancement device. MOSFET static behavior, Threshold voltage and its dependence on V_{SB} MOSFET Operation in resistive and saturation region, channel length modulation, Velocity saturation and its impact on sub micron devices, sub threshold conduction, Model for manual analysis, Equivalent resistance for MOSFET in (velocity) saturated region, comparison of equations for PMOS and NMOS. Dynamic behavior, Channel capacitance in different regions of operation, junction capacitance, Level 1 SPICE models for MOS transistors. The Wire, Interconnect parameters: resistance, capacitance and Inductance, Lumped RC model, Elmore Delay.	L1, L2	8
Module II: CMOS Inverter VTC of an ideal inverter, Switching Model of the CMOS inverter: NMOS /PMOS discharge and charge, VTC of CMOS inverter : PMOS and NMOS operation in various regions including velocity saturation, Switching threshold, $(W/L)_p/(W/L)_n$ ratio for setting desired V_M with and without velocity saturation, Noise Margins, buffer.	L3, L4	8

<p>Ratioed logic: Pseudo NMOS inverter and PMOS to NMOS ratio for performance, tri-state inverter, Resistive load inverter.</p> <p>Load Capacitance calculations: fan out capacitance, self capacitance calculations: Miller effect, wire capacitance; Improving delay calculation with input slope, Propagation delay: first order analysis, analysis from a design perspective, sizing a chain of inverters for minimum delay, choosing optimum number of stages, Power, Energy and Energy Delay: Dynamic power consumption, Static power, Glitches and power dissipation due to direct path currents, power and delay trade off, Transistor sizing for energy minimization.</p>		
<p>Module III: Combinational circuits</p> <p>CMOS LOGIC: Good 0 and Poor 0, series and parallel N and P switches, Two and Higher input NAND and NOR gates, Functions of the type $(AB+C(D+E))$ and their complements, XOR and XNOR gates, 2 input Multiplexer, Full Adder; Transistor sizing in CMOS logic for optimal delay, Pseudo NMOS NAND NOR and other gates and the transistor sizing, Introduction to DSVCL logic, CPL AND/NAND, OR/NOR, XOR/XNOR gates, Logical effort, Electrical Effort, Branching effort, Examples of sizing Combinational logic chains for minimum delay, Pass-transistor logic, pass gate configurations for NMOS and PMOS, 2 input and 4 input MUX, XOR, XNOR and implementation of general functions like $AB+AB*C+A*C*$, Robust and Efficient PTL Design, Delay of Transmission Gate chain.</p> <p>Dynamic CMOS design: Pre-charge and Evaluation, charge leakage, bootstrapping, charge sharing, Cascading Dynamic Gates, DOMINO Logic, Optimization of Domino Logic Gates, simple example circuit implementations of DOMINO logic.</p>	L2,L3,L4	10
<p>Module IV: Sequential Logic circuits</p> <p>Principle of biostability, NAND and NOR based SR latch, and clocked SR Latch, JK latch, example of master slave flip flop, CMOS D latch, , MUX based Latches, master slave edge triggered register, Static Timing Analysis –setup, hold time, clock skew, clock period, non ideal clocks, clock overlap, C2MOS register, TSPCR Register, Schmitt Trigger, Pipelining and NORA CMOS</p>	L2,L3,L4	5
<p>Module V: Layout Design Rules</p> <p>5 Lecture hours</p> <p>Introduction to CMOS Process technology, Latch up and its prevention Layout of CMOS inverter, CMOS NAND and NOR gates, Concept of Euler path, and stick diagrams for functions like $(AB+E+CD)*$.</p>	L2,L3,L4	5

CSE2616	OPEN SOURCE TECHNOLOGIES (PHP, MYSQL)	L	T	P	C
Version :2019.1	Date of Approval: 15 May 2019	2	0	0	2
Pre-requisites/Exposure	Basic Knowledge of HTML				
Co-requisites	Nil				

Catalog Description

The course includes the content about PHP and its Programming Concepts. It includes basic architecture of running a PHP Script. It also includes the concepts about Conditional, Control Statements, Array, Associative Array, String Functions and Concepts of Functions : Call by Value and Reference. The course also includes concepts related to Object Oriented Programming in PHP and website design support along with Database Support concepts which will be useful to design Backend for the website.

Course Objectives

The objective of this course is:

1. To provide a fundamental understanding of Dynamic Website Design in PHP.
2. To provide knowledge about various Frameworks build for Website Designing.

Course Outcomes

On completion of this course, the students will be able to

After completing the course, the students will be able to,

CO 1: Explain the basic concepts of PHP programming and write PHP scripts using Strings and functions

CO 2: Explain and write PHP scripts based on Conditional statements, control statements and Arrays.

CO 3: Apply Object Oriented and Web Design concepts of PHP in order to create responsive web pages and websites

CO 4: Apply the concepts of Database and Database connectivity in order to provide backend support to website to make them Dynamic in nature

CO 5: Demonstrate the website designing process on various PHP Frameworks.

Modules	Blooms level*	Number of hours
Module I: Introduction to Open Source and PHP programming Introduction to Open Sources Technologies, Introduction to PHP, installation and configuration, Advantages and Disadvantages of PHP, Client Side Scripting, Server Side Scripting, Variables, data types, various types of function, creating your own function, Strings in PHP, String Functions.	L1, L2 and L3	4
Module II: Operators, Loops, Array, Exception and Error Handling Operators, Conditions, Loops, Using for each, Creating and Using Arrays, Multidimensional Array, Associative Array. Error Handling in PHP, Errors and Exceptions, Exception class, try/catch block, throwing an exception, defining your own Exception subclass.	L1, L2, L3	5
Module III: Classes, File system, Passing Information between pages	L2, L3 and L4	7

Object oriented programming with Php, Working with Datetime, code re-use, require (), include(), and the include_path; Understanding PHP file permissions, File reading and writing functions, File system functions, File uploads, Sending mail & use of email server. HTTP, GET arguments, POST arguments, Using Session in PHP, cookies, The setcookie() function, Deleting Cookies and Reading Cookies.		
Module IV: Working with database HTML Tables and Database tables, Databasemanipulation(Select, Insert, Update, Delete), validating User Input using Javascript. MYSQL, Introducing MySQL; database design concepts; the Structured Query Language (SQL); communicating with a MySQL backend via the PHP, MySQL API Building Database Applications, Developing PHP scripts for dynamic web page like feedback form, online admission form and online test.	L2, L3 and L4	5
Module V: Working with Frameworks Working with Mambo, Working with Joomla, Working with framework. Working with wordpress, Working with drupal, Use of Joomla in rapid development of website. Developing of simple website using joomla.	L2, L3 and L4	3

**Bloom's Level:*

CSE2617	OPEN SOURCE TECHNOLOGIES (PHP, MYSQL) LAB	L	T	P	C
Version 2019.1	Date of Approval: 15 May 2019	0	0	2	1
Pre-requisites/Exposure	Basic Knowledge of HTML				
Co-requisites	Nil				

Catalog Description

The course includes PHP Programming Concepts. Conditional, Control Statements, Array, Associative Array, String Functions and Concepts of Functions: Call by Value and Reference are implemented. The course also includes concepts related to Object Oriented Programming in PHP and website design support along with Database Support concepts which will be useful to design Backend for the website.

Course Objectives

The objective of this course is:

1. To provide a fundamental understanding of Dynamic Website Design in PHP.
2. To provide knowledge about various Frameworks build for Website Designing.

Course Outcomes

On completion of this course, the students will be able to

- CO 1: Apply the basic concepts of PHP programming to rewrite PHP scripts using Strings and Functions
- CO 2: Demonstrate the concept of Conditional & Control Statements and 1 D, 2 D & Associative Array using PHP scripts
- CO 3: Apply Object Oriented and Web Design concepts of PHP in order to prepare responsive web pages and websites
- CO 4: Apply the concepts of Database and Database connectivity to prepare backend support for website.

Lab Sessions	Blooms level*	Number of hours
1. PHP Scripts on Basic Concepts <ul style="list-style-type: none"> • Write the process of installation of web server. • Write programs to print all details of your php server. Use phpinfo(). • Write a program to give demo of ECHO and PRINT command. • Write a program to implement the string functions. 	L1,L3	2
2. PHP Script on Conditional and Control Statements <ul style="list-style-type: none"> • Write a script to print Fibonacci series upto a given number. • Write a menu driven program to implement a calculator which performs only addition, subtraction, multiplication and division. The operation should happen based on user choice. • Write a script to calculate Factorial of a given number 	L1,L3	4
3. PHP Scripts on Arrays: 1D, 2D, Associative <ul style="list-style-type: none"> • Write a program sort ten number by using array. • Write a program to demonstrate the concept of associative array. • Write a program to demonstrate the concept of 	L1,L3	4

multidimensional array.		
4. PHP Scripts on Object Oriented Programming and File Handling Concepts <ul style="list-style-type: none"> Write a program to demonstrate the concept of Classes & objects. Write a php script including all the file handling functions. 	L1,L3	2
<ul style="list-style-type: none"> PHP Scripts on Webpage and Website Design Concepts Create a login form with two text fields called “login” and “password”. When user enters “Amity” as a user name and “university” as a password it should be redirected to a Welcome.HTML page or to Sorry. HTML in case of wrong username/password. Write a program to design login form in which find the greatest number amongst three numbers. WAP for Marksheet generation. Design a webpage for entering the student details with all the validations applied on it. Create a form with a text box asking to enter your favorite city with a submit button when the user enters the city and clicks the submit button another php page should be opened displaying “Welcometo the city”. 	L1,L3	6
5. PHP Scripts on Database Creation a Connectivity <ul style="list-style-type: none"> Create a database in MySql and connect that database from PHP. Write a program to Update, insert and delete the values of table in database. 	L1,L3	4

CSE2618	DATA MINING	L	T	P	C
Version 2019.1	Date of Approval: 15 May 2019	3	0	0	3
Pre-requisites/Exposure	Concept of Database and Data Mining				
Co-requisites	Nil				

Catalog Description

Data Mining serve as one of the most important courses for postgraduate students, since it builds computational abilities, inferential thinking, and practical skills for tackling core data scientific challenges. The students will get a comprehensive understanding of different data mining techniques that can be used for prediction and for discovering patterns, be prepared to select the right technique for a given data problem and will be able to create a general-purpose analytic process.

Course Objectives

The objective of this course is to

- Provide students with an in-depth knowledge of data mining. To introduce students to basic applications, concepts, and techniques of data mining.
- Develop skills for using recent data mining software to solve practical problems and prediction in a variety of disciplines and
- Gain experience doing independent study and research.

Course Outcomes

On completion of this course, the students will be able to

CO 1: Explain concepts of Data mining, predictive analytics and analyses architecture of data mining. Differentiate between supervised and unsupervised methods

CO 2: Apply classification techniques on different data sets and solve cost –benefit analysis numerical. Analyze decision tree methods.

CO 3: Implement various clustering algorithm on different data sets and describe these algorithms.

CO 4: Prepare data representation for market basket analysis and determine the usefulness of association rules. Interpret supervised and unsupervised learning methods.

CO 5: Predict market trends and outline different factors associated mail marketing.

Course Content

Modules	Bloom's level	Number of Hours
Module I Data Preparation An introduction to data mining and predictive analytics, Data Pre-processing Exploratory Data Analysis, Dimension- Reduction Methods.	L1, L2	8
Module II Classification k- Nearest Neighbour Algorithm, Decision Trees, Model Evaluation Technique, Cost –Benefit Analysis Using Data Driven Cost.	L1, L2, L3	7
Module III Clustering Hierarchical and k- Means Clustering, Kohonen Networks, Birch Clustering, Measuring Cluster Goodness.	L1, L2, L3, L4	8

Module IV Association Rules Affinity Analysis and Market Basket Analysis, Data Representation for Market Basket Analysis, Support, Confidence, Frequent Item sets, and the a Priori Property, How Does a Priori Algorithm Work? Generating Frequent Item sets, Generating Association Rules, Extension from Flag Data to General Categorical Data, Information-Theoretic Approach: Generalized Rule Induction Method, J-Measure, Association Rules are Easy to do Badly, how can we Measure the Usefulness of Association Rules? Do Association Rules Represent Supervised or Unsupervised Learning?	L1, L2, L3, L6	9
Module IV Case Study: Predicting Response to Direct Mail Marketing Business Understanding, Data Preparation, and Eda, Clustering and Principal Components Analysis, Modelling and Evaluation for Performance and Interpretability, Modelling and Evaluation for High Performance.	L2, L3, L4, L5	8

CSE2710	COMPUTER GRAPHICS	L	T	P	C
Version: 2019.1	Date of Approval: 15 May 2019	3	-	-	3
Pre-requisites/Exposure	Basic Knowledge of C++ Programming				
Co-requisites	Nil				

Catalog Description

This course covers understanding of software and hardware related to computer graphics systems. Topics include an introduction to the basic concepts, 2-D and 3-D modeling and transformations, viewing transformations, clipping, color filling, projections, rendering techniques, visible surface detection and elimination algorithms, graphical software packages and graphics systems. Students will use a standard computer graphics API to reinforce concepts and study fundamental computer graphics algorithms. Last module covers elementary image processing techniques and various library function in C to build animations.

Course Objectives

The objective of this course is to

1. Equip the students with fundamental concepts of graphics system and standards.
2. Equip the students with mathematical concepts of graphics algorithms to draw objects using C language.
3. Provide an overview of various 2D & 3D transformation, clipping operations, algorithms related to hidden surface detection and elimination and their implementation.
4. Provide an overview of various elementary image processing techniques and basic library function in C to create animation sequence.

Course Outcomes

On completion of this course, the students will be able to

CO 1: Explain applications of computer graphics and define various standards and components in development of computer graphics.

CO 2: Explain generation of graphics primitives and analyze their problems and solutions. Demonstrate solid filling algorithms. Demonstrate polygon clipping and line clipping algorithm and analyze their problems and solutions.

CO 3: Apply 2D geometric transformations on 2D graphics objects with their practical implementation. Illustrate use of window to viewport transformation in computer graphics.

CO4: Apply 3D geometric transformations on 3D objects with their practical implementation.

CO 5: Illustrate the use of 3D object modeling, Visible Surface detection and elimination algorithm and analyze their problems and solutions.

Modules	Blooms level*	Number of hours
Module I: Introduction to Graphics and Graphics Hardware System Application of computer graphics, Video Display Devices, Raster Scan Display, Random Scan Display, Input Devices, Graphic Software and graphics standards, Numerical based on Raster and Random scan display, Frame buffer, Display processor.	L1, L2	5

Module II: Output Primitives and Clipping operations Algorithms for drawing 2D Primitives lines (DDA and Bresenham's line algorithm), circles (Bresenham's and midpoint circle algorithm), ellipses (midpoint ellipse algorithm), Antialiasing and filtering techniques. Line clipping (cohen-sutherland algorithm), Curve clipping algorithm, and polygon clipping with Sutherland Hodgeman algorithm, Area fill algorithms for various graphics primitives: Scanline fill algorithm, boundary fill algorithm, flood fill algorithm, Polygon representation, various method of Polygon Inside test: Even-Odd method, winding number method, Character generation techniques.	L2, L3, L4	6
Module III: 2D Geometric transformation 2D Transformation: Basic transformation, Translation, Rotation, Rotation relative to an arbitrary point, scaling, Matrix Representations and Homogeneous coordinates, window to viewport transformation.	L3 and L4	6
Module IV: 3D Geometric transformation 3D Concepts: Parallel projection and Perspective projection, 3D Transformations, composite 3D transformation, co-ordinate transformation, Inverse transformation	L3 and L5	7
Module V: object modelling and Visible Surface detection fractal geometry methods, fractal dimensions, Geometric construction of deterministic self-similar fractals, Iterated function system to generate fractals. Bezier curves and Bezier surfaces, Bspline curves and surfaces, Visible surface detection method: Basic illumination, diffuse reflection, specular reflection, shadows. Ray tracing method, Depth-buffer method, A-buffer method, Depth-sorting method (painter's algorithm), Binary search partition method, Scan line method,	L4, L5	7
Module VI: Introduction to multimedia Design of animation sequences, Computer Animation languages, Elementary filtering techniques and elementary Image Processing techniques, graphics library functions used in animation design	L2, L3, L5	5

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain applications of computer graphics and define various standards and components in development of computer graphics.

CO2: Explain generation of graphics primitives and analyze their problems and solutions. Demonstrate solid filling algorithms. Demonstrate polygon clipping and line clipping algorithm and analyze their problems and solutions.

CO3: Apply 2D geometric transformations on 2D graphics objects with their practical implementation. Illustrate use of window to viewport transformation in computer graphics.

CO4: Apply 3D geometric transformations on 3D objects with their practical implementation.

CO5: Illustrate the use of 3D object modeling, Visible Surface detection and elimination algorithms and analyze their problems and solutions.

CO6: Explain Elementary filtering techniques and elementary Image Processing techniques. Apply C++ graphics library functions to design animation sequence.

Modules	Blooms level*	Number of hours
Module I: Introduction to Graphics and Graphics Hardware System <ol style="list-style-type: none"> 1. Demonstrate the use of graphics library functions to draw various graphics objects. 2. Demonstrate the use of graphics library functions to draw pie chart. 3. Demonstrate the use of graphics library functions to draw bar 	L3,L5	2

chart on screen.		
Module II: Output Primitives and Clipping operations <ol style="list-style-type: none"> 1. Demonstrate the use of DDA line drawing algorithm to draw line on the screen when $m \leq 1$ and $m > 1$. 2. Demonstrate the use of DDA line drawing algorithm to draw line on the screen when $m \leq 1$ and $m > 1$. 3. Demonstrate the use of Bresenham's line drawing algorithm to draw line on the screen when $m \leq 1$ and $m > 1$. 4. Demonstrate the use of circle drawing algorithm to draw circle on the screen. 5. Write a program to draw characters on screen using bitmap character generation method. 6. Write a program to fill a polygon using boundary fill algorithm. 7. Write a program to fill a polygon using flood fill algorithm. 8. Write a program to demonstrate line clipping algorithm to clip a line where line slope is $m \leq 1$. 	L3,L5	6
Module III: 2D Geometric transformation <ol style="list-style-type: none"> 1. Write a program to translate a triangle where translation factors are $t_x=20$ and $t_y=30$. 2. Write a program to rotate a triangle in clock-wise and anti-clock-wise direction where rotation angle is 300. 3. Write a program to scale a square where scaling factors are $S_x=2$ and $S_y=3$. 4. Write a program to reflect a triangle about X axis. 5. Demonstrate combine 2D transformation after applying translation, rotation and scaling transformations. 6. Write a program to demonstrate fix point scaling where scaling factors are $S_x=2$ and $S_y=3$. 7. Write a program to demonstrate window to viewport transformation and linear mapping of the object coordinates in viewport where size of viewport is half to the size of window. 	L3,L5	6
Module IV: 3D Geometric transformation <ol style="list-style-type: none"> 1. Write a program to translate a 3D triangle where translation factors are $t_x=20$ and $t_y=30$. 2. Write a program to rotate a 3D triangle in clock-wise and anti-clock-wise direction where rotation angle is 300. 3. Write a program to scale a 3D square where scaling factors are $S_x=2$ and $S_y=3$. 4. Demonstrate combine 3D transformation after applying translation, rotation and scaling transformations. 	L3,L5	4
Module V: Object modelling and Visible Surface detection <ol style="list-style-type: none"> 1. Write a program to draw Bezier curve on the screen with 4 control points. 2. Write a program to draw spline curve on screen using 6 control points. 3. Write a program to implement fractal objects using Iterated 	L3,L5	3

Function System.		
Module VI: Introduction to multimedia		
1. Create animation Sequence using C++ Graphics Library Function.	L3,L5	3
2. Write a program to generate histogram of an image.

CSE2713	CRYPTOGRAPHY & NETWORK SECURITY	L	T	P	C
Version 2019.1	Date of Approval: 15 May 2019	2	1	0	3
Pre-requisites/Exposure	Basic Mathematics				
Co-requisites	Nil				

Catalog Description

In this course the concepts of cryptography and network security are discussed in detail. Substitution and transposition techniques, symmetric and asymmetric cryptographic algorithms, their applications, differences will be introduced. As a precursor to the study of cryptography studies will be made on impact of various network and web security protocols. The concepts learnt in the studies of cryptography & network security will be applied in the studies and analysis of authentication, integrity and security related protocols.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of cryptography & network security through problem solving and analytical approach.
2. Provide an overview of various network attacks and related security mechanism , various algorithms for modular arithmetic, symmetric and asymmetric cryptography and web and network security

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain, describe and distinguish various security attacks; Describe and solve block and stream ciphers and its applications in cryptography; Solve problems based on substitution and transposition ciphers.

CO2: Explain the basic mathematics of cryptography; Solve problems of groups, modular arithmetic ,gcd and inverse algorithm, chinese remainder theorem and its application in cryptography; Applying algorithms for solving problems in cryptography

CO3: Describing the concept of public key cryptosystems and its related algorithm; Explain and solve problems related to hash functions, digital signature and its applications in cryptography; Compare symmetric and asymmetric key cryptography.

CO4: Explain management, distribution, secure exchange of keys and authentication certificate and its applications in real life. Explain, compare various authentication protocols used in cryptography and network security, also solve problems based on these protocols.

CO5: Explain various security protocols: IPsec, SSL, TLS, SET; Describing malicious software's and illustrating various design approaches to Firewall.

Modules	Blooms level*	Number of hours
MODULE 1: Introduction to security attacks, services and mechanism, Classical encryption techniques: substitution ciphers and transposition ciphers, cryptanalysis, steganography, Stream and block ciphers. Modern Block Ciphers: Block ciphers principles, Shannon's theory of confusion and diffusion, fiestal structure, Data encryption standard (DES), Strength of DES, Idea of differential cryptanalysis, block cipher modes of operations, Triple DES	L1, L2 and L3	7

MODULE 2: Introduction to group, field, finite field of the form $GF(p)$, modular arithmetic, prime and relative prime numbers, Extended Euclidean Algorithm, Advanced Encryption Standard (AES) encryption and decryption, Fermat's and Euler's theorem, Primality testing, Chinese Remainder theorem, Discrete Logarithm Problem, Principles of public key crypto systems, RSA algorithm, security of RSA.	L1,L2, L3	6
MODULE 3: Message Authentication Codes: Authentication requirements, authentication functions, message authentication code, hash functions, birthday attacks, security of hash functions, Secure hash-algorithm (SHA) Digital Signatures: Digital Signatures, Elgamal Digital Signature Techniques, Digital signature standards (DSS).	L1,L2, L3 and L5	7
MODULE 4: Key Management and distribution: Symmetric key distribution, Diffie-Hellman Key Exchange, Public key distribution, X.509 Certificates, Public key Infrastructure. Authentication Applications: Kerberos	L1, L2 and L3	7
MODULE 5: IP Security: Architecture, Authentication header, Encapsulating security payloads, combining security associations, key management. Viruses and related threats, Firewalls	L1, L2	9

CSE2714	SYSTEM PROGRAMMING & COMPILER CONSTRUCTION	L	T	P	C
Version 2019.1	Date of Approval: 15 May 2019	3	1	0	4
Pre-requisites/Exposure	Fundamental concept of computer architecture and operating system and theory of automata				
Co-requisites	Basics of programming languages				

Catalog Description

This course includes the concept of system programming and compiler construction in which all the system applications and programming concepts will be discussed. All the phases of compiler construction will be discussed in detail with some brief description of context free grammar. Using Basic Parsing Techniques efficient Parsers can be constructed with the help of error detection and recovery techniques.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of system programming and working of system utilities.
2. Provide an overview of estimation of performance of compiler design in real time compilation with error handling techniques during compilation.

Course Outcomes

On completion of this course, the students will be able to

- CO 1: Describe the basics of compiler design and its co-relation with the subject computation theory of automation in terms of lexical analyzer.
- CO 2: Explain the working of assembler and macro processor with all the phases of it. And also describe the concept of loader and other system utilities of system software at the time of program translation.
- CO 3: Explain and differentiate the construction of parser through top-down and bottom up parsing techniques.
- CO 4: Explain and analyze the automatic construction of different parsing table which do not allow any ambiguity and backtracking in the given grammar.
- CO 5: Explain the process of syntax analyzer and identify any error occurs in this phase and also generate the three-address code the given grammar and the postfix translation.

Modules	Blooms level*	Number of hours
MODULE 1: Introduction Phases, FSM & RE's and their application to Lexical Analysis, Implementation of Lexical Analysers, The Syntactic specification of Languages: CFG, Derivation and Parse Trees, Capabilities of CFG.	L1 and L2	4
MODULE 2: System Programming Editors: Introduction to system Programming Line editor, Full screen editor and multi window editor, First pass and second pass of assembler and their algorithms. Assemblers for CISC Machines: case study x85 & x86 machines. Bootstrapping for compilers, Introduction to. Design of a compiler in C++ as Prototype. Basic Macro Processor functions- Macro definition & expansion – Macro Processor Algorithm & Data Structures, conditional – Macro Expansion, Keyword Macro Parameters, Macro with in Macro Implementation,	L1 and L2	11

Linkers and Loaders Concept of linking. Case study of Linker in x86 machines. Loading of various loading schemes. Booting techniques and sub-routines.		
MODULE 3: Basic Parsing Techniques Parsers, Shift Reduce Parsing, Operator precedence parsing, top down Parsing, Predictive Parsers.	L2, L3 and L4	9
MODULE 4: Automatic Construction of efficient Parsers LR Parsers, the canonical collection of LR(0) items, constructing SLR Parsing Tables, Constructing canonical LR Parsing tables and LALR parsing tables, An Automatic Parser Generator, Implementation of LR parsing Tables, Constructing LALR sets of items.	L2, L3 and L4	8
MODULE 5: Syntax Directed Translation Syntax directed Translation Schemes, Implementation of Syntax directed translators, Intermediate Code, Postfix notation, Parse Trees and Syntax Trees, Three address Code, Quadruple & Triples, Translation of Assignment Statements, Postfix Translation.	L2 and L3	9
MODULE 6: Error detection and Recovery Lexical phase errors, syntax phase errors, semantic errors Code Optimization: Loop optimization, the DAG representation of basic blocks, value numbers and Algebraic Laws, Global Data – Flow Analysis.	L1, L2 and L3	7

CSE2716	SYSTEM PROGRAMMING & COMPILER LAB	L	T	P	C
Version 2019.1	Date of Approval: 15 May 2019	0	0	2	1
Pre-requisites/Exposure	concept of pointer and file handling of C/C++ programming languages				
Co-requisites	NIL				

Catalog Description

In this Lab course the concept of system programming and compiler construction are implemented and demonstrated. Concepts covered would enable them to create and solve complex problems.

Problems or programs will be related to concepts of assembler, macro processor, text editor and parser.

Course Objectives

The objective of this course is to

1. Make the students apply knowledge of various system programming concepts such as assembler, macro processor and text editor.
2. Provide a demonstration of compiler concepts like parsing techniques and implementation.

Course Outcomes

On completion of this course, the students will be able to

CO1: Apply the knowledge of regular languages and context free grammar.

CO2: Demonstrate the use of lexical analyzer and concept of editors.

CO3: Apply the knowledge of compiler design to convert the given expression into acceptable form of compiler.

CO4: Demonstrate the concept of assemble and macro-processor and their calling and expansion.

CO5: Demonstrate and apply the knowledge of compiler parsing techniques to construct parse tree for the given expression.

Modules/Topics Covered**	Blooms level*	Number of hours
1. Sample Programs using the theory of computation concepts of regular language. (a) WAP to check whether string is accepted or not for entered grammar. (b) WAP to convert NFA to DFA. (c) WAP to convert Regular Expression to NFA.	L3, L5	6
2. Sample Programs using context free grammar and editors (a) WAP to find no of Tokens in an expression. (b) Write a program to implement Text Editor.	L3, L5	4
3. Sample Programs using the notation conversion and their usage in parsing. (a) WAP to convert Infix to Postfix notation. (b) WAP to convert Infix to Prefix notation.	L3, L5	2
4. Sample Programs using the concept of assemble and macro	L3, L5	4

processor (a) Write a program to implement Assembler Pass one and Pass two. (b) Write a program to implement Macro-processor.		
5. Sample Programs using the compiler parsing techniques (a) WAP to implement symbol table. (b) WAP calculate FIRST and FOLLOW of a grammar. (c) WAP to implement shift reduce parser.	L3, L5	6

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

**** Sample Programs provided are not limited to these only, can include others as desired.**

CSE2735	SUMMER INTERNSHIP EVALUATION-II	L	T	P	C
Version: 2017.1	Date of Approval: 14 th June 2017	0	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The objective of this course is to provide practical training on some live projects that will increase capability to work on actual problem in industry. This training may undergo in an industrial environment or may be an in-house training on some latest software which is in high demand in market. This training will be designed such that it will useful for their future employment in industry.

Course Objectives

The objective of this course is to

1. Provide practical training on live projects
2. Increase technical capabilities on solving real life problems in company environment

Course Outcomes

On completion of this summer internship, the students will be able to:

CO1: Develop communication, interpersonal and other critical skills in the job interview process.

CO2: Design and develop software and hardware projects

CO3: Assess interests and abilities in their field of study.

CO4: Demonstrate excellent technical and communication skills to acquire employment contacts leading directly to a full-time job following graduation from college.

CSE2737	MINOR PROJECT-II	L	T	P	C
Version: 2019.1	Date of Approval: 15 May 2019	0	0	0	2
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The objective of this course is to provide practical training on some live/demo projects that will increase capability to work on actual problem in industry. It will be an in house training on some latest software which is in high demand in market. This training will be designed such that it will useful for their future employment in industry.

Course Objectives

The objective of this course is to

1. Provide practical training on live projects
2. Increase technical capabilities on solving real life problems in company environment

Course Outcomes

On completion of this minor project, the students will be able to:

CO1: Demonstrate a sound technical knowledge of their selected project topic.

CO2: Design and develop engineering solutions to complex problems utilising a systems approach.

CO3: Analyse various approaches for solving a complex engineering problem using different tools and techniques

CO4: Demonstrate the knowledge, skills and attitudes of a professional engineer.

CO5: Apply technical skills and knowledge in completing the project.

CSE2707	MOBILE COMPUTING	L	T	P	C
Version 2017.1	Date of Approval: June 2017	3	0	0	3
Pre-requisites/Exposure	Basic Networking				
Co-requisites	Nil				

Catalog Description

The objective of this consortium is to shape and expand a full-scale and sound mobile computing system market. To achieve this, cooperation is required of interests related to communication (network), computer hardware/software, system integrators (including service providers), and the media.

Course Objectives

The objective of this course is to

1. Give a general overview of the cellular technology and the associated terms and discuss the generations of the mobile technologies starting from 1G to 3G techniques.
2. Illustrate the GPRS and WAP model for 2G internet connectivity in detail.
3. Elaborate the third-generation mobile services
4. Describe the Global Mobile Satellite Systems in detail and basic architecture of Bluetooth technology and advanced topics in mobile computing.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the basic concepts mobile technology, computing and basic architecture of PCS and GSM.

CO2: Describe the mobile networking Infrastructure through 2G technologies (GSM, GPRS, WAP).

CO3: Explain the basic concepts of 3G technologies (WCDMA, CDMA 2000) and WLL.

CO4: Discuss the working of mobile satellite systems like IRIDIUM and GLOBALSTAR.

CO5: Explain the concepts of Bluetooth technology, its working and protocols, virtual networks and enterprise networks.

Modules	Blooms level*	Number of hours
Module I: Introduction to Personal Communications Services (PCS) PCS Architecture, Mobility management, Networks signalling. Global System for Mobile Communication (GSM) system overview: GSM Architecture, Mobility management, Network signalling.	L1, L2 and L3	8
Module II: General Packet Radio Services (GPRS) & Wireless Application Protocol (WAP) GPRS Architecture, GPRS Network Nodes. Mobile Data Communication: WLANs (Wireless LANs) IEEE 802.11 standard, Mobile IP. Wireless Application Protocol (WAP): The Mobile Internet standard, WAP Gateway and Protocols, wireless mark up Languages (WML).	L1,L2	10

Module III: Third Generation (3G) Mobile Services Introduction to International Mobile Telecommunications 2000 (IMT 2000) vision, Wideband Code Division Multiple Access (W-CDMA), and CDMA 2000, Quality of services in 3G. Wireless Local Loop (WLL): Introduction to WLL Architecture, wireless Local Loop Technologies.	L1, L2	7
Module IV: Global Mobile Satellite Systems Global Mobile Satellite Systems; case studies of the IRIDIUM and GLOBALSTAR systems.	L1, L2	7
Module V: Enterprise Networks Introduction to Virtual Networks, Blue tooth technology, Blue tooth Protocols. Advanced techniques in mobile computing.	L1, L2	4

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

CSE2717	ROBOTIC PROCESS AUTOMATION DESIGN & DEVELOPMENT	L	T	P	C
Version 2019.1	Date of Approval: 15 May 2019	3	0	0	3
Pre-requisites/Exposure	Basic Networking Concepts				
Co-requisites	Nil				

Catalog Description

This course aims at providing knowledge of basic concepts of Robotic Process Automation to University students. It further builds on these concepts and introduces key RPA Design and Development strategies and methodologies specifically in context of UiPath products. The student undergoing the course shall develop the competence to design and develop a robot for a defined process.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of robotic process automation
2. Provide an overview of designing with uipath software.

Course Outcomes

On completion of this course, the students will be able to

- CO1: Explain key terms and trends around the robotic process automation along with its physical and logical design
- CO2: Understand the potential and value of the robotic process automation .
- CO3: Describe the technologies used for the robotic process automation and mobile devices, including (passive and active) sensors, the physical communications layer, communications protocols, programming frameworks,.
- CO4: Design programs and have hands on experience on uipath software
- CO5: Develop RPA programs of moderate complexity for a well-used robotic automation process using uipath.

Modules	Blooms level*	Number of hours
Module 1: Programming Basic and Recap Programming Concepts Basics I - Understanding the application, Basic Web Concepts, Protocols, Email Clients, Data Structures, Data Tables, Algorithms, Software Processes, Software Design, SDLC. Programming Concepts Basics 2- Scripting, Net Framework, Net Fundamentals, XML, Control structures and functions, XML, HTML, CSS, Variables & Arguments.	L1, L2	8
Module II: RPA Concepts RPA Basics - History of Automation, what is RPA, RPA vs Automation, Processes & Flowcharts, Programming Constructs in RPA, What Processes can be Automated, Types of Bots, Workloads which can be automated. RPA Advanced Concepts - Standardization of processes, RPA Development methodologies, Difference from SDLC, Robotic control flow architecture, RPA business case, RPA Team, Process Design Document/Solution Design Document, Industries best suited for RPA, Risks & Challenges with RPA, RPA and emerging ecosystem	L2, L3 and L4	8
Module III: UiPath Introduction & Basics Introduction to UiPath- Installing UiPath Studio community edition, The User Interface, Keyboard Shortcuts, About Updating, About Automation Projects, Introduction to Automation Debugging, Managing Activation Packages, Reusing Automations Library, Installing the Chrome Extension, Installing the Firefox Extension, Connecting your project to a source control system, Activities Guide. Variables, Control Flow Data Manipulation- Data Manipulation Introduction, Scalar variables, collections and Tables, Text Manipulation, Data Manipulation, Gathering and Assembling Data. Recording and Advanced UI Interaction - Recording Introduction, Basic and Desktop Recording, Web Recording, Input/Output Methods, Screen Scraping, Data Scraping, Scraping advanced techniques. Selectors.	L2, L3 and L4	8
Module IV: UiPath Advanced Automation concepts and techniques Image, Text & Advanced Citrix Automation- Introduction to Image & Text Automation, Image based automation, Keyboard based automation, Information Retrieval, Advanced Citrix Automation challenges, Best Practices, using tab for Images, Starting Apps. Excel Data Tables & PDF - Data Tables in RPA, Excel and Data Table basics, Data Manipulation in excel, Extracting Data from PDF, extracting a single piece of data, Anchors, Using anchors in PDF. Email Automation- Email Automation, Incoming Email automation, Sending Email automation	L2, L3 and L4	12

CSE2718	RESPONSIVE WEB DESIGN	L	T	P	C
Version : 2019.1	Date of Approval: 15 May 2019	2	0	1	3
Pre-requisites/Exposure	knowledge of website design				
Co-requisites	NIL				

Catalog Description

This course is aimed to provide a fundamental understanding of JavaScript and two of its related library: Bootstrap and React for dynamic web site client side scripting. Javascript is a famous scripting language for client side. The bootstrap and react libraries are rich API for creating dynamic websites. The course builds strong foundation for client-side scripting for creating dynamic websites

Course Objectives

The objective of this course is

1. Equip the students with basic and advanced features of javascript and bootstrap library to create dynamic web sites
2. Provide an overview of basic features of react library to design dynamic websites.

Course Outcomes

On completion of this course, the students will be able to

CO1: Define the and explain concept of responsive web design and responsive content.

CO2 Explain HTML and CSS contents for responsive websties; Design and Create responsive websites using html, css and media queries.

CO3: Explain the concept of responsive workflow and working with responsive web design tools; Creating responsive websites that work on variety of devices.

CO4: Designing responsive websites using the concepts of typography, navigation and header layout; Evaluating performance of responsive websites.

Modules	Blooms level*	Number of hours
Module 1: Foundations of responsive design What Is Responsive Design?: Just the Basics ,A Short History, Why Responsive Design Responsive Content: Content Strategy ,Managing Content, Developing Content, Content Parity, Content Governance, Adaptive Content	L2 and L3	8
Module 2: Creating Responsive Websites HTML for Responsive Sites: Working with HTML, Basic Page Structure Viewport, Structural Elements, Creating a Page, Clean and Semantic HTML CSS for Responsive Sites: How CSS Works, Versions of CSS, Where CSS Goes, The Cascade, Using the Cascade, Comments, Organizing Your Stylesheet, The Box Model, display, Positioning, float and clear, Basic Styles Media Queries: What's a Media Query? Media Query Structure, Using Media Queries in Stylesheet Links, Other Ways to Use Media Queries, What We Can Query, Browser Support, Breakpoints, Design Ranges, Designing Responsively, Using Media Queries, Two-Column Layout, Setting a Maximum Width, How to Choose Breakpoints	L2 and L3	8

Images: Ways to Display Images, Alt Text, Image File Formats, Optimizing Images, Content Images, Background Images Responsive Images		
Module 3: Working Responsively Responsive Workflow: Strategy and Planning, Content Before Layout Thinking About Layout, Prototypes, Visual Design, Responsive Design Tools, Selling Responsive Design, Working with Clients Mobile and Beyond: User Experience , Device-Agnostic Design, Focusing on Mobile First, Do What You Can, Types of Devices, Touch, Screen Size, Accessibility (Universal Design), Deciding Which Devices to Support Why Use Real Devices for Testing, Testing	L2 and L3	8
Module 4: Designing Responsive Websites Typography: Start with HTML, Typefaces, Using Fonts, Sizing Text, Line Length, Whitespace, Margins and Padding, Changing Typeface for Screen Size Navigation and Header Layout: Responsive Navigation , Branding, Navigation Links, Navigation Patterns, Header Performance: Why Performance Matters, Performance as Design ,How Web Pages Are Loaded and Rendered, Measuring Performance Cleaning Up Your Code, Minimizing HTTP Requests, Server Stuff JavaScript, CSS, Hosting, Conditionally Loading Content, Reflows and Repaints, RESS	L2and L3	12

CSE2719	RESPONSIVE WEB DESIGN LAB	L	T	P	C
Version : 2019.1	Date of Approval: 15 May 2019	0	0	2	1
Pre-requisites/Exposure	knowledge of website design				
Co-requisites	NIL				

Catalog Description

This course is aimed to provide a fundamental understanding of JavaScript and two of its related library: Bootstrap and React for dynamic web site client side scripting. Javascript is a famous scripting language for client side. The bootstrap and react libraries are rich API for creating dynamic websites. The course builds strong foundation for client-side scripting for creating dynamic websites

Course Objectives

The objective of this course is

1. Equip the students with basic and advanced features of javascript and bootstrap library to create dynamic web sites
2. Provide an overview of basic features of react library to design dynamic websites.

Course Outcomes

On completion of this course, the students will be able to

CO1: Define the and explain concept of responsive web design and responsive content.

CO2 Explain HTML and CSS contents for responsive websties; Design and Create responsive websites using html, css and media queries.

CO3: Explain the concept of responsive workflow and working with responsive web design tools; Creating responsive websites that work on variety of devices.

CO4: Designing responsive websites using the concepts of typography, navigation and header layout; Evaluating performance of responsive websites .

Modules	Blooms level*	Number of hours
Module 1: Foundations of responsive design Programs based on: <ul style="list-style-type: none"> • Content Strategy ,Managing Content, • Developing Content, Content Parity, • Content Governance, Adaptive Content 	L2 and L3	3
Module 2: Creating Responsive Websites Programs based on: <ul style="list-style-type: none"> • Working with HTML, Basic Page Structure Viewport, Structural Elements, Creating a Page, Clean and Semantic HTML • The Cascade, Using the Cascade, Comments, Organizing Your Stylesheet, The Box Model, display, Positioning, float and clear, Basic Styles • Media Query Structure, Using Media Queries in Stylesheet Links, Other Ways to Use Media Queries, • What We Can Query, Browser Support, Breakpoints, Design Ranges, Designing Responsively, Using Media Queries, Two-Column Layout, Setting a Maximum 	L2 and L3	3

<ul style="list-style-type: none"> Width, How to Choose Breakpoints Images: Ways to Display Images, Alt Text, Image File Formats, Optimizing Images, Content Images, Background Images Responsive Images 		
Module 3: Working Responsively Programs based on: <ul style="list-style-type: none"> Responsive Workflow, Visual Design, Responsive Design Tools, Selling Responsive Design, Working with Clients Mobile and Beyond: User Experience , Device-Agnostic Design, Focusing on Mobile First, Do What You Can, Types of Devices, Touch, Screen Size, Accessibility (Universal Design), Deciding Which Devices to Support Why Use Real Devices for Testing, Testing 	L2 and L3	3
Module 4: Designing Responsive Websites <ul style="list-style-type: none"> Typography: Start with HTML, Typefaces, Using Fonts, Sizing Text, Line Length, Whitespace, Margins and Padding, Changing Typeface for Screen Size Navigation and Header Layout: Responsive Navigation , Branding, Navigation Links, Navigation Patterns, Header Performance: Why Performance Matters, Performance as Design ,How Web Pages Are Loaded and Rendered, Measuring Performance Cleaning Up Your Code, Minimizing HTTP Requests, Server Stuff JavaScript, CSS, Hosting, Conditionally Loading Content, Reflows and Repaints, RESS 	L2and L3	3

CSE2837	PROJECT DISSERTATION	L	T	P	C
Version: 2017.1	Date of Approval: 14 th June 2017	0	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The objective of this course is to provide practical training on some live/demo projects that will increase capability to work on actual problem in industry. It will be an in house training on some latest software which is in high demand in market. This training will be designed such that it will useful for their future employment in industry.

Course Objectives

The objective of this course is to

1. Provide practical training on live projects
2. Increase technical capabilities on solving real life problems in company environment

Course Outcomes

On completion of this summer internship, the students will be able to:

CO1: Demonstrate a sound technical knowledge of their selected project topic.

CO2: Design and develop engineering solutions to complex problems utilising a systems approach.

CO3: Analyse various approaches for solving a complex engineering problem using different tools and techniques

CO4: Demonstrate the knowledge, skills and attitudes of a professional engineer.

CO5: Apply technical skills and knowledge in completing the project.

CSE2804	DOT NET PROGRAMMING	L	T	P	C
Version:2017.1	Date of Approval: 14 June, 2017	3	0	1	4
Pre-requisites/Exposure	C#.NET, HTML and CSS				
Co-requisites	Nil				

Catalog Description

This course provides knowledge regarding Creating Dynamic Web Pages with the help of ASP.NET framework. Various topics

Course Objectives

The objective of this course is to

1. Equip the students with concepts of ASP.NET web applications including State management, Web Controls and ADO.NET.
2. Provide knowledge to develop secure ASP.NET web applications using C#.NET programming language.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the components of .NET framework and create basic ASP.NET web page.

CO2: Use various standard and advance web controls for developing ASP.NET dynamic web pages and also create custom controls.

CO3: Establish database connectivity and perform various operations on database through ASP.NET web pages.

CO4: Maintain states at client and server site both.

CO5: Develop and use web services.

Modules	Blooms level*	Number of hours
MODULE 1: .NET FRAMEWORK .NET Framework and its features CLR, MSIL,CTS, .NET class library, .NET Languages, CTS, assemblies, manifest, and metadata, What is ASP.NET?, Difference between ASP and ASP.NET	L1, L2	4
MODULE 2: WEB CONTROLS Standard Controls, Validation controls, Adv. Controls, Custom Controls	L2, L3 and L4	14
MODULE 3: ADO.NET ADO.NET,ADO.NET Architecture Data Adapters, Datasets, Command, Data Reader Data Reader Data bind Controls Displaying data in data grid XML in ADO.NET	L2, L3 and L4	7
MODULE 4: SECURITY ASP.NET applications : Security, Error Handling	L2 and L3	2
MODULE 5: STATE MANAGEMENT State Management : View State, Session State, Web Services	L2, L3 and L4	5

CSE2806	DOT NET PROGRAMMING LAB	L	T	P	C
Version 2017.1	Date of Approval: 14, June, 2017	0	0	1	1
Pre-requisites/Exposure	C#.NET, HTML and CSS				
Co-requisites	Nil				

Catalog Description

This lab course covers development of Web applications using ASP.NET. The concepts are designed to impart the knowledge of ASP.NET framework concepts at implementation level. The major topic covered includes theme, state management, web controls and database connectivity using ADO.NET and web services.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of ASP.NET web applications including State management, Web Controls and ADO.NET.
2. Provide knowledge to develop secure ASP.NET web applications using C#.NET programming language.

Course Outcomes

On completion of this course, the students will be able to

CO1: Use various standard and advance web controls for developing ASP.NET dynamic web pages and also create custom controls.

CO2: Maintain states at client and server site both.

CO3: Establish database connectivity and perform various operations on database through ASP.NET web pages.

CO4: Develop and use web services.

Modules	Blooms level*	Number of hours
1. Basics of ASP.NET Page a) Write a program to implement C#.NET class with properties and methods. b) Design a Login Page, which displays a Welcome Page on successful Login and an error message in case of invalid Id/Password. c) Design a form and apply themes (design time and dynamically).	L1, L2	4
2. State Management a) Implement state management for Login page which move to welcome page when credentials are correct. The welcome page displays a welcome message along with the user Id. b) Implement various state management methods using a suitable web form.		2
3. Built-in Controls, Custom Controls a) Design any web form and apply various validation controls. b) Create a web form which can work in Hindi and English language both. c) Design a web form to upload an image to server. d) Design a custom control, Numeric Textbox, which should accept only integer value for a particular range. The range should be customizable.	L2, L3 and L4	6
4. ADO.NET	L2, L3	4

a) Create any database table and apply basic operations (Insert/Delete/Update) on it using ASP.NET application. b) Implement various methods of execution of SQL command. c) Display data in a Grid and perform basic database operations.	and L4	
5. Security, Web Services a) Develop any web application to illustrate SQL Injection attack and redesign it to prevent the attack. b) Develop a web application to illustrate XSS attack and redesign it to prevent the attack	L2 and L3	2
6. Web Application Create a small web application having some application.	L2, L3 and L4	6

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

CSE2812	ADVANCED ROBOTIC PROCESS AUTOMATION DESIGN & DEVELOPMENT	L	T	P	C
Version 2019.1	Date of Approval: 15 May 2019	3	0	0	3
Pre-requisites/Exposure	Basic Networking Concepts				
Co-requisites	Nil				

Catalog Description

This course aims at providing knowledge of basic concepts of Robotic Process Automation to University students. It further builds on these concepts and introduces key RPA Design and Development strategies and methodologies specifically in context of UiPath products. The student undergoing the course shall develop the competence to design and develop a robot for a defined process.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of robotic process automation
2. Provide an overview of designing with uipath software.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain key terms and trends around the robotic process automation along with its physical and logical design

CO2: Understand the potential and value of the robotic process automation .

CO3: Describe the technologies used for the robotic process automation and mobile devices, including (passive and active) sensors, the physical communications layer, communications protocols, programming frameworks,.

CO4: Design programs and have hands on experience on uipath software

CO5: Develop RPA programs of moderate complexity for a well-used robotic automation process using uipath.

Modules	Blooms level*	Number of hours
Module I: Exception handling and Best Practices Debugging and Exception Handling- Debugging Tools, Strategies for solving issues, Catching errors. Project Organization- Concept of project organization, Best practices, Avoiding pitfalls, Invoke Activity.	L1, L2	8
Module II: Introduction to Orchestrator Orchestrator, Tenants, Authentication, Users, Roles, Robots, Environments, Queues & Transactions, Schedules.	L2, L3 and L4	8
Module III: merging and Future Trends in IT Artificial Intelligence, Machine Learning, Agent awareness, Natural Language Processing Computer Vision	L2, L3 and L4	8
Module IV: Capstone Project Real life case studies which can be used to apply the concepts learnt during the course. The projects shall test student's skills right from process transformation and documentation to the design and development of the actual robot	L2, L3 and L4	12

*Bloom's Level:

CSE2803	DIGITAL IMAGE PROCESSING	L	T	P	C
Version: 2017.1	Date of Approval: 14 th June 2017	2	0	0	2
Pre-requisites/Exposure	Basics of Computer Graphics				
Co-requisites	NIL				

Catalog Description

This course gives students an insight into the basics of Image Processing along with visualization of real concept of Image processing. Concepts covered would enable students to define and differentiate among various types of image refinement. Further they would be able to gain insights about various Image restoration and modification technique.

Course Objectives

Processing color and grayscale images or other two-dimensional signals has become an important tool for research and investigation in many areas of science and engineering. *Digital Image Processing* is designed to give professionals and students a powerful collection of fundamental and advanced image processing tools on the desktop. Digital Image Processing takes full advantage of the computational technology of Mathematica.

Course Outcomes

On completion of this course, the students will be able to

CO1: Define and explain introductory part of Digital Image Processing

CO2: List out the Image Enhancement techniques in the Spatial Domain

CO3: Explain concepts of Image Enhancement in the Frequency Domain

CO4: Describe the architecture Image Compression

CO5: Explain the basics of Representation and Description

Modules	Blooms level*	Number of hours
MODULE 1: Introduction and Digital Image Fundamentals The origins of Digital Image Processing, Examples of Fields that Use Digital Image Processing, Fundamentals Steps in Image Processing, Elements of Digital Image Processing Systems, Image Sampling and Quantization, Some basic relationships like Neighbors, Connectivity, Distance Measures between pixels, Linear and Non Linear Operations.	L1 and L2	8
MODULE 2: Image Enhancement in the Spatial Domain Some basic Gray Level Transformations, Histogram Processing, Enhancement Using Arithmetic and Logic operations, Basics of Spatial Filters, Smoothing and Sharpening Spatial Filters, Combining Spatial Enhancement Methods.	L2 and L3	8
MODULE 3: Image Enhancement in the Frequency Domain Introduction to Fourier Transform and the frequency Domain, Smoothing and Sharpening Frequency Domain Filters, Homomorphism Filtering.	L1 and L2	10

MODULE 4: Image Compression Coding, Interpixel and Psychovisual Redundancy, Image Compression models, Elements of Information Theory, Error free comparison, Lossy compression, Image compression standards. Image Segmentation Detection of Discontinuities, Edge linking and boundary detection, Threshold, Region Oriented Segmentation, Motion based segmentation.	L2 and L3	12
MODULE 5: Representation and Description Representation, Boundary Descriptors, Regional Descriptors, Use of Principal Components for Description, Introduction to Morphology, Some basic Morphological Algorithms. Object Recognition Patterns and Pattern Classes, Decision-Theoretic Methods, Structural Methods.	L2 and L3	10

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

CSE2805	DIGITAL IMAGE PROCESSING LAB	L	T	P	C
Version 2017.1	Date of Approval: 15May 2019	0	0	2	1
Pre-requisites/Exposure	Basics of MATLAB				
Co-requisites	NIL				

Catalog Description

In this Lab course first student should learn about advanced level of software used for easy calculation and toolbox used for software like MATLAB.

Course Objectives

The objective of this course is to

1. Make the students apply knowledge of various Image processing & pattern recognition required for solving complex problems.
2. Provide a demonstration of different types of image processing techniques through MATLAB toolbox.

Course Outcomes

On completion of this course, the students will be able to

CO1: Acquiring knowledge of Basics of High-end calculation software and need in Computer Science & engineering

CO2: Demonstrate the All preliminary functions in MATLAB

CO3: Apply the knowledge of all the basics function and toolbox knowledge of MATLAB

CO4: Demonstrate the Use of MATLAB in image Processing

CO5: Demonstrate usage of applications involving with Image processing & Recognition Its Toolbox used by MATLAB

Modules/Topics Covered**	Blooms level*	Number of hours
1. Introduction of MATLAB (e) Basic Variable declaration & its operation (f) Function use & its application	L3, L5	4
2. Sample Programs in MATLAB (e) Basic use of Matrix and Graph Plotting (f) Different type of graph plotting with use of different -2 type of data	L3, L5	6
3. Sample Programs using MATLAB functions (l) Create a basic program MATLAB using functions (m) Use of basic function Image processing (n) Practice on Basic function of Image processing tool box.	L3, L5	6
4. Sample programs of ANN functions (c) Practice on Pattern Recognition functions in MATLAB (d) Write a program for training a small network in MATLAB	L3, L5	6
5. Sample Programs using ANN toolbox & Image processing toolbox (b) Demonstrate the use of ANN tool box & Image processing toolbox and write a program after combining it.	L3, L5	2

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

**** Sample Programs provided are not limited to these only, can include others as desired.**

INTRODUCTION TO COMPUTERS AND PROGRAMMING IN C

Course Code: NCE6104

Credit Units : 03

Course Objective:

The objective of this course module is to acquaint the students with the basics of computers system, its components, data representation inside computer and to get them familiar with various important features of procedure oriented programming language i.e. C.

Course Contents:

Module I: Introduction

Introduction to computer, history, von-Neumann architecture, memory system (hierarchy, characteristics and types), H/W concepts (I/O Devices), S/W concepts (System S/W & Application S/W, utilities). Data Representation: Number systems, character representation codes, Binary, octal, hexadecimal and their interconversions. Binary arithmetic, floating point arithmetic, signed and unsigned numbers, Memory storage unit.

Module II: Programming in C

History of C, Introduction of C, Basic structure of C program, Concept of variables, constants and data types in C, Operators and expressions: Introduction, arithmetic, relational, Logical, Assignment, Increment and decrement operator, Conditional, bitwise operators, Expressions, Operator precedence and associativity. Managing Input and output Operation, formatting I/O.

Module III: Fundamental Features in C

C Statements, conditional executing using if, else, nesting of if, switch and break Concepts of loops, example of loops in C using for, while and do-while, continue and break. Storage types (automatic, register etc.), predefined processor, Command Line Argument.

Module IV: Arrays and Functions

One dimensional arrays and example of iterative programs using arrays, 2-D arrays Use in matrix computations.

Concept of Sub-programming, functions Example of user defined functions. Function prototype, Return values and their types, calling function, function argument, function with variable number of argument, recursion.

Module V: Advanced features in C

Pointers, relationship between arrays and pointers Argument passing using pointers, Array of pointers. Passing arrays as arguments.

Strings and C string library.

Structure and Union. Defining C structures, Giving values to members, Array of structure, Nested structure, passing strings as arguments.

File Handling.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;
Att: Attendance

PROGRAMMING IN C LAB

Course Code: NCE6106

Credit Units : 01

Software Required: Turbo C

Course Contents:

- C program involving problems like finding the nth value of cosine series, Fibonacci series. Etc.
- C programs including user defined function calls
- C programs involving pointers, and solving various problems with the help of those.
- File handling

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

ENGINEERING GRAPHICS LAB

Course Code: NCE6211

Credit Units : 01

Course Objective:

This course will provide students concepts on the drawings of different curves like straight line, parabola, ellipse etc. After completion of this course, students will be able to draw different figures manually and will be capable of using various instruments involved in drawings.

Course Contents:

Module I: General

Importance, Significance and scope of engineering drawing, Lettering, Dimensioning, Scales, Sense of proportioning, Different types of projections, Orthographic Projection, B.I.S. Specifications.

Module II: Projections of Point and Lines

Introduction of planes of projection, Reference and auxiliary planes, projections of points and Lines in different quadrants, traces, inclinations, and true lengths of the lines, projections on Auxiliary planes, shortest distance, intersecting and non-intersecting lines.

Module III: Planes other than the Reference Planes

Introduction of other planes (perpendicular and oblique), their traces, inclinations etc., Projections of points and lines lying in the planes, conversion of oblique plane into auxiliary Plane and solution of related problems.

Module IV: Projections of Plane Figures

Different cases of plane figures (of different shapes) making different angles with one or both reference planes and lines lying in the plane figures making different given angles (with one of both reference planes). Obtaining true shape of the plane figure by projection.

Module V: Projection of Solids

Simple cases when solid is placed in different positions, Axis faces and lines lying in the faces of the solid making given angles.

Module VI: Development of Surface

Development of simple objects with and without sectioning. Isometric Projection

NCE6213	BASIC ELECTRICAL AND ELECTRONICS ENGINEERING LAB	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

In this course, students will become familiar with basic electrical circuits. The students will learn practical aspects and implementation of theorems related to electrical circuits, law's related to flow of current, voltages, transformer and transistors.

Course Objectives

The objective of this course is to:

- Provide the overview of concept of flow of current/voltage of electrical circuits.
- Provide the basic knowledge about the concepts of electrical circuits and BJTs.

Course Outcomes

On completion of this course, the students will be able to:

- CO1. Explain the fundamental theorems and laws related to the electrical circuits and experimentally verify the basic circuit theorems
- CO2. Explain the working principle and estimate the performance of single phase transformers.
- CO3. Understand 3 phase balanced and unbalanced, star and delta connected supply and load and to measure power in 3 phase circuits
- CO4. Able to design circuit with Bipolar Junction Transistor in CB, CE & CC configurations

Modules	Blooms level*	Number of hours
Lab Session 1: Network Analysis Techniques & Theorems <ol style="list-style-type: none"> To verify KVL & KCL in the given network. To verify Superposition Theorem. To verify Maximum Power Transfer Theorem. To verify Reciprocity Theorem. To determine and verify R_{Th}, V_{Th}, R_N, I_N in a given network. 	L1, L2 and L3	6
Lab session II: Transformers and transistors <ol style="list-style-type: none"> To perform open circuit & short circuit test on a single-phase transformer. To perform regulation, ratio & polarity test on a single-phase transformer. To obtain the characteristics of a transistor under common base (CB) and common emitter (CE) configuration. 	L1, L2 and L3	3
Lab session III: Alternating Current Circuits <ol style="list-style-type: none"> To study transient response of a given RLC Circuit. To measure power & power factor in a three phase circuit by two wattmeter method. To measure power & power factor in a three phase load using three ammeter & three voltmeter method. 	L1, L2 and L3	3

*Bloom's Level:

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

OBJECT ORIENTED PROGRAMMING USING C++

Course Code: NCE6204

Credit Units : 03

Course Objective:

The objective of this module is to introduce object oriented programming. To explore and implement the various features of OOP such as inheritance, polymorphism, Exceptional handling using programming language C++. After completing this course student can easily identify the basic difference between the programming approaches like procedural and object oriented.

Course Contents:

Module I: Introduction

Review of C, Difference between C and C++, Procedure Oriented and Object Oriented Approach. Basic Concepts: Objects, classes, Principles like Abstraction, Encapsulation, Inheritance and Polymorphism. Dynamic Binding, Message Passing. Characteristics of Object-Oriented Languages. Introduction to Object-Oriented Modeling techniques (Object, Functional and Dynamic Modeling).

Module II: Classes and Objects

Abstract data types, Object & classes, attributes, methods, C++ class declaration, Local Class and Global Class, State identity and behaviour of an object, Local Object and Global Object, Scope resolution operator, Friend Functions, Inline functions, Constructors and destructors, instantiation of objects, Types of Constructors, Static Class Data, Array of Objects, Constant member functions and Objects, Memory management Operators.

Module III: Inheritance

Inheritance, Types of Inheritance, access modes – public, private & protected, Abstract Classes, Ambiguity resolution using scope resolution operator and Virtual base class, Aggregation, composition vs classification hierarchies, Overriding inheritance methods, Constructors in derived classes, Nesting of Classes.

Module IV: Polymorphism

Polymorphism, Type of Polymorphism – Compile time and runtime, Function Overloading, Operator Overloading (Unary and Binary) Polymorphism by parameter, Pointer to objects, this pointer, Virtual Functions, pure virtual functions.

Module V: Strings, Files and Exception Handling

Manipulating strings, Streams and files handling, formatted and Unformatted Input output. Exception handling, Generic Programming – function template, class Template Standard Template Library: Standard Template Library, Overview of Standard Template Library, Containers, Algorithms, Iterators, Other STL Elements, The Container Classes, General Theory of Operation, Vectors.

Examination Scheme:

OBJECT ORIENTED PROGRAMMING USING C++ LAB

Course Code: NCE6208

Credit Units : 01

Software Required: Turbo C++

Course Contents:

- Creation of objects in programs and solving problems through them.
- Different use of private, public member variables and functions and friend functions.
- Use of constructors and destructors.
- Operator overloading
- Use of inheritance in and accessing objects of different derived classes.
- Polymorphism and virtual functions (using pointers).
- File handling.

DATABASE MANAGEMENT SYSTEMS

Course Code: NCE6302

Credit Units : 04

Course Objective:

The objective of this course is to get students familiar with Databases and their use. They can identify different types of available database model, concurrency techniques and new applications of the DBMS.

Course Contents:

Module I: Introduction

Concept and goals of DBMS, DBMS Architecture, Database Languages, Database Users, Database Abstraction. Basic Concepts of ER Model: Entity Type, Entity Set, Relationship type, Relationship sets, Constraints: Cardinality Ratio and Participation Constraint, Keys, Mapping, Design of ER Model

Module II: Hierarchical model & Network Model

Concepts, Data definition, Data manipulation and implementation.
Network Data Model, DBTG Set Constructs, and Implementation

Module III: Relational Model

Relational database, Relational Algebra, Relational Calculus, Tuple Calculus.

Module IV: Relational Database Design and Query Language

SQL, QUEL, QBE, Normalization using Functional Dependency, 1NF, 2NF, 3NF, BCNF, Multivalued dependency and Join dependency.

Module V: Concurrency Control and New Applications

Transaction basics: ACID property, Lifecycle of Transaction, Why Concurrency Control, Schedule, Serializability, Lock Based Protocols, Time Stamped Based Protocols, Deadlock Handling, Crash Recovery. Distributed Database, Objective Oriented Database, Multimedia Database, Data Mining, Digital Libraries.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;

OPERATING SYSTEMS

Course Code: NCE6303

Credit Units : 03

Course Objective:

Operating Systems serve as one of the most important courses for undergraduate students, since it provides the students with a new sight to envision every computerized systems especially general purpose computers. Therefore, the students are supposed to study, practice and discuss on the major fields discussed in the course to ensure the success of the education process. The outcome of this course implicitly and explicitly affects the abilities the students to understand, analyze and overcome the challenges they face with in the other courses and the real world.

Course Contents:

Module I: Introduction to operating system

Operating system and function, Evolution of operating system, Batch, Interactive, multiprogramming, Time Sharing and Real Time System, multiprocessor system, Distributed system, System protection. Operating System structure, Operating System Services, System Program and calls.

Module II: Process Management

Process concept, State model, process scheduling, job and process synchronization, structure of process management, Threads, Inter-process Communication and Synchronization: Principle of Concurrency, Producer Consumer Problem, Critical Section problem, Semaphores, Hardware Synchronization, Critical Regions, Conditional critical region, Monitor, Inter Process Communication.

CPU Scheduling: Job scheduling functions, Process scheduling, Scheduling Algorithms, Non Preemptive and preemptive Strategies, Algorithm Evaluation, Multiprocessor Scheduling.

Deadlock: System Deadlock Model, Deadlock Characterization, Methods for handling deadlock, Prevention strategies, Avoidance and Detection, Recovery from deadlock combined approach.

Module III: Memory Management

Single Contiguous Allocation: H/W support, S/W support, Advantages and disadvantages, Fragmentation, Paging, Segmentation, Virtual memory concept, Demand paging, Performance, Paged replaced algorithm, Allocation of frames, Thrashing, Cache memory, Swapping, Overlays

Module IV: Device management

Principles of I/O hardware, Device controller, Device Drivers, Memory mapped I/O, Direct Access Memory, Interrupts, Interrupt Handlers, Application I/O interface, I/O Scheduling, Buffering, Caching, Spooling,

Disk organization, Disk space management, Disk allocation Method, Disk Scheduling, Disk storage.

Module V: File System and Protection and security

File Concept, File Organization and Access Mechanism, File Directories, Basic file system, File Sharing, Allocation method, Free space management.

Policy Mechanism, Authentication, Internal excess Authorization.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

DATA STRUCTURES USING C

Course Code: NCE6304

Credit Units : 04

Course Objective:

Data structure deals with organizing large amount of data in order to reduce space complexity and time requirement. This course gives knowledge of algorithms, different types of data structures and the estimation space and time complexity.

Course Contents:

Module I: Introduction to Data structures

Data structures: Definition, Types. Algorithm design, Complexity, Time-Space Trade- offs. Use of pointers in data structures. Array Definition and Analysis, Representation of Linear Arrays in Memory, Traversing of Linear Arrays, Insertion And Deletion, Single Dimensional Arrays, Two Dimensional Arrays, Multidimensional Arrays, Function Associated with Arrays, Character String in C, Character String Operations, Arrays as parameters, Implementing One Dimensional Array, Sparse matrix.

Module II: Introduction to Stacks and queue

Stack: Definition, Array representation of stacks, Operations Associated with Stacks- Push & Pop, Polish expressions, Conversion of infix to postfix, infix to prefix (and vice versa), Application of stacks recursion, polish expression and their compilation, conversion of infix expression to prefix and postfix expression, Tower of Hanoi problem.

Queue: Definition, Representation of Queues, Operations of queues- QInsert, QDelete, Priority Queues, Circular Queue, Deque.

Module III: Dynamic Data Structure

Linked list: Introduction to Singly linked lists: Representation of linked lists in memory, Traversing, Searching, Insertion into, Deletion from linked list, doubly linked list, circular linked list, generalized list. Applications of Linked List-Polynomial representation using linked list and basic operation. Stack and queue implementation using linked list.

Module IV: Trees and Graphs

Trees: Basic Terminology, Binary Trees and their representation, expression evaluation, Complete Binary trees, extended binary trees, Traversing binary trees, Searching, Insertion and Deletion in binary search trees, General trees, AVL trees, Threaded trees, B trees.

Graphs: Terminology and Representations, Graphs & Multigraphs, Directed Graphs, Sequential representation of graphs, Adjacency matrices, Transversal Connected Component and Spanning trees.

Module V: Sorting and Searching and file structures

Sorting: Insertion Sort, Bubble sort, Selection sort, Quick sort, two-way Merge sort, Heap sort, Partition exchange sort, Shell sort, Sorting on different keys, External sorting.

Searching: Linear search, Binary search, File structures: Physical storage media, File Organization, Linked organization of file, Inverted file, Organization records into blocks, Sequential blocks, Hash function, Indexing & Hashing, Multilevel indexing, Tree Index, Random file, Primary Indices, Secondary Indices, B tree index files.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;

E-COMMERCE AND ERP

Course Code: NCE6310

Credit Units : 03

Course Objective:

This course examines the evolution of enterprise resource planning (ERP) systems - from internally focused client/server systems to externally focused e-business. This class studies the types of issues that managers will need to consider in implementing cross-functional integrated ERP systems. The objective of this course is to make students aware of the potential and limitations of ERP systems. This objective will be reached through hands-on experience, case studies, lectures, guest speakers and a group project. The course would equip students with the basics of E-Commerce, technologies involved with it and various issues associated with.

Course Contents:

Module I: Introduction E-commerce and ERP

E-commerce and its types, EDI and its basics, Digital payment systems, Enterprise-An Overview, Benefits of ERP, ERP and Related Technologies-Business Process Reengineering (BPR), Data Warehousing, Data Mining, On-line Analytical Processing (OLAP), Supply Chain Management, Management Information systems (MIS), Decision support system (DSS), Executive Information systems (EIS). ERP – A Manufacturing Perspective Materials Requirement Planning (MRP), Bill of Material (Bom), Distribution Requirements Planning (DRP), JIT & Kanban, CAD/CAM, Product Data Management (PDM), Benefits of PDM, MTO, MTS, ATO, ETO, CTO.

Module II: ERP Modules

Business Modules in an ERP Packag- Finance, Manufacturing (Production), Human Resources, Plant Maintenance, Materials Management, Quality Management, Sales and Distribution.

Module III: Benefits of ERP

Time Reduction, On time shipment, Improved Resource Utilization, Performance, Customer Satisfaction, Flexibility, information accuracy and decision making capability, reduction in quality costs, Accuracy.

Module IV: ERP Implementation

ERP Implementation Lifecycle, Implementation Methodology, In-house implementation-Pros and cons, Vendors, Consultants and Users and their roles, Project Management and Monitoring after ERP Implementation.

Module V: The ERP Market and Future Directions

ERP Market Place- SAP AG, PeopleSoft, Baan Company, JD Edwards World Solutions Company, Oracle Corporation, QAD, System Software Associates, Inc. (SSA).Future directions in ERP.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

ELECTRONIC DEVICES & CIRCUITS

Course Code: NCE6311

Credit Units : 02

Course Objective:

This course builds from basic knowledge of Semiconductor Physics to an understanding of basic devices and their models. This course builds a foundation for courses on VLSI design and analog CMOS IC Design.

Course Contents:

Module I: Semiconductor physics: Mobility & conductivity, Charge densities in a semiconductor, Fermi dirac distribution, carrier concentration and Fermi levels in semiconductor, generation and recombination of charges, diffuse and continuity equations, Hall effect.

Module II: Semiconductor Diode and Diode Circuits

Junction diode, Diode as circuit element, Different types of diodes: Zener, Schottky, LED. Zener as voltage regulator, Diffusion capacitance, Drift capacitance, the load line concept, half wave, full wave rectifiers, clipping and clamping circuits.

Module III: Bipolar Junction Transistor

Bipolar junction transistor: Introduction, Transistor, construction, transistor operations, BJT characteristics, load line, operating point, leakage currents, saturation and cut off mode of operations. Bias stabilization: Need for stabilization, fixed Bias, emitter bias, self bias, bias stability with respect to variations in I_{co} , V_{BE} & β , Stabilization factors, thermal stability.

Module IV: Small signal Analysis of transistor and Multistage Amplifier

Hybrid model for transistors at low frequencies, Analysis of transistor amplifier using h parameters, emitter follower, Miller's theorem, THE CE amplifier with an emitter resistance, Hybrid π model, Hybrid π Conductances and Capacitances, CE short circuit current gain, CE short circuit current gain with R_L Multistage amplifier: Cascading of Amplifiers, Coupling schemes (RC coupling and Transformer coupling)

Module V: Field Effect Transistors

Field effect transistor (JFET, MOSFET): volt-ampere characteristics, small signal model –common drain, common source, common gate, operating point, MOSFET, enhancement and -depletion mode, Common source amplifier, Source follower

Module VI: Feedback Amplifiers

Feedback concept, Classification of Feedback amplifiers, Properties of negative Feedback amplifiers, Impedance considerations in different Configurations, Examples of analysis of feedback Amplifiers.

Module VII: Power Amplifiers

Power dissipation in transistors, difference with voltage amplifiers, Amplifier classification (Class A, Class B, Class C, Class AB) class AB push pull amplifier, collector efficiency of each, cross over distortion.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE

ELECTRONIC DEVICES & CIRCUITS LAB

Course Code: NCE6312

Credit Units : 01

Course Contents:

1. To study and plot the characteristics of a junction diode.
2. To study Zener diode as a voltage regulator.
3. To study diode based clipping and clamping circuits.
4. To study half wave, full wave and bridge rectifier with filters.
5. To study the input and output characteristics of a transistor in its various configurations.
6. To study and plot the characteristics of a JFET in its various configurations.
7. To study and plot the characteristics of a MOSFET in its various configurations.
8. To study various types of Bias Stabilization for a transistor.
9. To study the gain and plot the frequency response of a single stage transistor amplifier.
10. To measure gain and plot the frequency response of double stage RC coupled amplifier.

DIGITAL ELECTRONICS

Course Code: NCE6313

Credit Units : 02

Course Objective:

This course is an introduction to the basic principles of digital electronics. At the conclusion of this course, the student will be able to quantitatively identify the fundamentals of computers, including number systems, logic gates, logic and arithmetic subsystems, and integrated circuits. They will gain the practical skills necessary to work with digital circuits through problem solving and hands on laboratory experience with logic gates, encoders, flip-flops, counters, shift registers, adders, etc. The student will be able to analyze and design simple logic circuits using tools such as Boolean Algebra and Karnaugh Mapping, and will be able to draw logic diagrams.

Course Contents:

Module I: Boolean Functions

Analog & digital signals, AND, OR, NOT, NAND, NOR & XOR gates, Boolean algebra, Standard representation of logical functions, K-map representation and simplification of logical function, don't care conditions, XOR & XNOR simplifications of K-maps, Tabulation method.

Module II: Combinational Circuits

Adders, Subtractors, Multiplexer, de-multiplexer, decoder & encoder, code converters, Comparators, decoder / driver for display devices, Implementation of logic functions using multiplexer / de-multiplexer,.

Module III: Sequential Circuits

Flip-flops: SR, JK, D & T flip flops – Truth table, Excitation table, Conversion of flip-flops, race around condition, Master Slave flip flop, Shift registers: SIPO, PISO, PIPO, SIPO, Bi-directional; Counters: ripple & synchronous counters – up / down; Synchronous Sequential circuit: design procedure.

Module IV: Logic families

Logic families: RTL, DTL, TTL, ECL

Module V: Data Converters

Data converters: ADC – successive approximation, linear ramp, dual slope; DAC – Binary Weighted, R-2R ladder type

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

ARTIFICIAL INTELLIGENCE

Course Code: NCE6404

Credit Units : 03

Course Objective:

To develop semantic-based and context-aware systems to acquire, organize process, share and use the knowledge embedded in multimedia content. Research will aim to maximize automation of the complete knowledge lifecycle and achieve semantic interoperability between Web resources and services. The field of Robotics is a multi disciplinary as robots are amazingly complex system comprising mechanical, electrical, electronic H/W and S/W and issues germane to all these.

Course Contents:

Module I: Problem solving and Scope of AI

Introduction to Artificial Intelligence. Applications- Games, theorem proving, natural language processing, vision and speech processing, robotics, expert systems. AI techniques- search knowledge, abstraction.

Problem Solving

State space search; Production systems, search space control: depth-first, breadth-first search. Heuristic search - Hill climbing, best-first search, branch and bound. Problem Reduction, Constraint Satisfaction End, Means-End Analysis. LA* Algorithm, L(AO*) Algorithm.

Module II: Knowledge Representation

Knowledge Representation issues, first order predicate calculus, Horn Clauses, Resolution, Semantic Nets, Frames, Partitioned Nets, Procedural Vs Declarative knowledge, Forward Vs Backward Reasoning.

Module III: Understanding Natural Languages

Introduction to NLP, Basics of Syntactic Processing, Basics of Semantic Analysis, Basics of Parsing techniques, context free and transformational grammars, transition nets, augmented transition nets, Shanks Conceptual Dependency, Scripts ,Basics of grammar free analyzers, Basics of sentence generation, and Basics of translation..

Module IV

Expert System: Need and justification for expert systems, knowledge acquisition, Case studies: MYCIN, R1

Learning: Concept of learning, learning automation, genetic algorithm, learning by inductions, neural nets. **Programming Language:** Introduction to programming Language, LISP and PROLOG.

Handling Uncertainties: Non-monotonic reasoning, Probabilistic reasoning, use of certainty factors, Fuzzy logic.

Module V: Introduction to Robotics

Fundamentals of Robotics, Robot Kinematics: Position Analysis, Dynamic Analysis and Forces, Robot Programming languages & systems: Introduction, the three levels of robot programming, requirements of a robot programming language, problems peculiar to robot programming languages.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

DIGITAL ELECTRONICS LAB

Course Code: NCE6314

Credit Units : 01

List of Experiments:

1. To verify the truth tables of OR, AND, NOR, NAND, EX-OR, EX-NOR gates.
2. To obtain half adder, full adder and subtractor using gates and verify their truth tables.
3. To verify the truth tables of RS, JK and D flip- flops.
4. To design and study a binary counter.
5. To design and study synchronous counter.
6. To design and study ripple counter.
7. To convert BCD number into excess 3 form
8. To design and study a decade counter.
9. To design and study a sequence detector.
10. To implement control circuit using multiplexer.

COMMUNICATION SYSTEMS

Course Code: NCE6407

Credit Units : 02

Course Objective:

The purpose of this course is to provide a thorough introduction to analog and digital communications with an in depth study of various modulation techniques, Random processes are discussed, and information theory is introduced.

Course Contents:

Module I: Introduction

Communication Process, Source of Information, Communication channels, base-band and pass-band signals, Review of Fourier transforms, Random variables, different types of PDF, need of modulation process, primary communication resources, analog versus digital communications

Module II: Amplitude modulation

Amplitude modulation with full carrier, suppressed carrier systems, single side band transmission, switching modulators, synchronous detection, envelope detection, effect of frequency and phase errors in synchronous detection, comparison of various AM systems, vestigial side band transmission.

Module III: Angle Modulation

Narrow and wide band FM, BW calculations using Carlson rule, Direct & Indirect FM generations, phase modulation, Demodulation of FM signals, noise reduction using pre & de-emphasis.

Module IV: Pulse Modulation

Pulse amplitude, width & position modulation, generation & detection of PAM, PWM & PPM, Comparison of frequency division and time division multiplexed systems, Basics of digital communications: ASK, PSK, FSK, QPSK basics & waveform with brief mathematical introduction

Module V: Noise

Different types of noise, noise calculations, equivalent noise band width, noise figures, effective noise temperature, noise figure.

Module VI: Introduction to Information Theory

Measurement of Information, mutual, Shannon's theorem, Source coding, channel coding and channel capacity theorem, Huffman code

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

COMMUNICATION SYSTEMS LAB

Course Code: NCE6408

Credit Units : 01

List of Experiments:

- To study the sampling and reconstruction of a given signal.
- To study amplitude modulation and demodulation.
- To study frequency modulation and demodulation.
- To study time division multiplexing.
- To study pulse amplitude modulation.
- To study delta and adaptive delta modulation and demodulation.
- To study carrier modulation techniques using amplitude shift keying and Frequency shift keying.
- To study carrier modulation techniques using binary phase shift keying and differential shift keying.
- To study pulse code modulation & differential pulse code modulation as well as relevant demodulations.
- To study quadrature phase shift keying & quadrature amplitude modulation.

ARTIFICIAL NEURAL NETWORK

Course Code: NCE6411

Credit Units : 02

Course Objective:

Aim of this course is to introduce the students fundamentals concepts of Neural network and its various application in computer science.

Course Contents:

Module I:-

Artificial Neural Networks (ANN) and biological neural networks, supervised and unsupervised learning rules, neural network applications.

Module II:-

Unsupervised learning:- Hebbian learning and competitive learning. Supervised learning:- Back propagation algorithms,

Learning rule:-

Delta learning rule, Widrow-Hoff learning rule, Winner-Take-All learning rule.

Module III:-

Feed forward neural network, feed backward neural network, Perceptron and its learning law, single-layer perceptron, multi-layer perceptron.

Module IV:-

Self organizing networks: Kohonen algorithm, Hopfield Networks: Hopfield network algorithm, Adaptive resonance theory: Network and learning rules.

Module V:-

Associative memory, auto-associative memory, bi-directional associative memory.

Examination Scheme:

NCE6417	WEB DESIGNING TECHNOLOGIES	L	T	P	C
Version: 2019.1	Date of Approval: 15 May 2019	2	0	2	3
Pre-requisites/Exposure	knowledge of Internet fundamentals				
Co-requisites	NIL				

Catalog Description

The objective of this course is to introduce the basic concepts of HTML5 and CSS3. To explore and implement the various concepts of website design using HTML with the concept of the tags, script, and code that create web pages. To understand how the web and web pages work and web pages styles using CSS3. After completing this course students can easily develop static web sites and style them using CSS3.

Course Objectives

The objective of this course is

1. Understand the advanced features of HTML5 which includes images, links, tables, frames and forms etc and gives an overview of CSS3 which is used to add style to the web pages.
2. Demonstrate the application of HTML5 in developing solutions to web site creation and understanding how CSS will affect web page creation.
3. Design a responsive web site using HTML5 and CSS3.

Course Outcomes

On completion of this course, the students will be able to

CO 1: Explain the basic concepts of HTML, structure of HTML. Apply the different tags for images, hypertext and lists in web pages.

CO 2: Illustrate the different ways to use styles in web pages using CSS? Apply CSS style sheets for formatting text in web pages.

CO 3: Explain the layout of CSS style and describe how to add audio and video in html web pages.

CO 4: Demonstrate the use of Table and frames in web pages and setting properties for tables and frames.

CO 5: Explain the writing scripts in web pages and publishing Webpages on web.

Modules	Blooms level*	Number of hours
Module I History of HTML, Basic HTML Structure, Creating title, Creating header and footer, Adding Comments, Formatting Text, Specifying time, Indicating citations/references, quotes, abbreviations, pre-formatted text, Inserting Images, Creating Image Links, Scaling images with the browser, setting icons for web page, Creating hypertext, anchor tag, Creating List, Creating Definition List, Creating Hyper Text Links, Creating Link Lists.	L2 and L3	8
Module II CSS building blocks, working with style sheets, Creating different types of style sheets- External , embedded and inline style sheets, defining selectors , Selecting on basis of class and id, selecting elements based on the attributes, combining selectors, Formatting text with styles, setting font properties.	L3 and L4	7
Module III CSS: Layout with style, changing the background color, setting border, changing the cursor, style sheets for mobile to desktop, working with web fonts, creating forms, organizing the form elements. Adding audio , video and other multi-media .	L2 and L3	7
Module IV Tables and frames, Creating Tables, Table Element, Adding Border, Adding Column Headings, Adding Spacing and Padding, Adding a Caption, Setting the table Width and Height, Add Row Headings, Aligning Cell contents, Setting Column Width, Centering a Table, Inserting and Image, Spanning Columns, Spanning Rows Assigning Background Colors, Frame Elements, Creation of Frame Based Pages.	L3	7

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Amity University Haryana
Manesar Gurgaon-122413

Module V: Working with scripts : Loading an external script, testing & debugging web pages, publishing your web page on the web.	L2	7
--	----	---

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

COMPUTER ARCHITECTURE

Course Code: NCE6502

Credit Units : 04

Course Objective:

This course deals with computer architecture as well as computer organization and design. Computer architecture is concerned with the structure and behaviour of the various functional modules of the computer and how they interact to provide the processing needs of the user. Computer organization is concerned with the way the hardware components are connected together to form a computer system. Computer design is concerned with the development of the hardware for the computer taking into consideration a given set of specifications.

Course Contents:

Module I: Register Transfer Language

Register Transfer, Bus and Memory Transfers, Arithmetic Micro-operations, Logic Micro-operations, Shift Micro-operations, Arithmetic Logic shift Unit.

Module II: Basic Computer Organizations and Design

Instruction Codes, Computer Registers, Computer Instructions, Timing and Control, Instruction Cycle, Memory-Reference Instructions, Input-Output and Interrupt, Design of Accumulator Logic. Hardwired and Microprogrammed control: Control Memory, Address Sequencing, Design of Control Unit

Module III: Central Processing Unit

Introduction, General Register Organization, Stack Organization, Instruction representation, Instruction Formats, Instruction type, Addressing Modes, Data Transfer and Manipulation, Program Control, Reduced Instruction Set Computer RISC and CISC. Computer Arithmetic: Introduction, Addition and Subtraction Algorithm, Multiplication Algorithms, Booth Multiplication, Division Algorithms, Floating-Point Arithmetic Operations

Module IV: Memory and Intrasystem Communication and Input output organisation

Memory: Memory types and organization Memory Hierarchy, Main Memory, Auxiliary Memory, Associative Memory, Cache Memory with mapping techniques, Virtual Memory, Memory Management Hardware, **Intrasystem communication and I/O:** Peripheral Devices, Input-Output, Controller and I/O driver, IDE for hard disk, I/O port and Bus concept, Bus cycle, Synchronous and asynchronous transfer, Modes of Transfer, DMA, DMA Transfer, DMA Controller, I/O Processor, CPU-IOP Communication

Module V: Introduction to Pipelining and Multi-Processor

Parallel Processing, Pipelining, Arithmetic Pipeline, Instruction Pipeline, RISC Pipeline, Multiprocessors: Characteristics of Multiprocessors

Examination Scheme:

JAVA PROGRAMMING

Course Code: NCE6503

Credit Units : 03

Course Objective:

The objective is to impart programming skills used in this object oriented language java. The course explores all the basic concepts of core java programming. The students are expected to learn it enough so that they can develop the web solutions like creating applets etc.

Course Contents:

Module I: Java Basics

Concepts of OOP, Features of Java, How Java is different from C++, Environmental setup, Basic syntax, Objects and classes, Basic Data Types, Variable Types, Modifier Types, Basic operators, Loop Control, Decision Making, Strings and Arrays, Methods, I/O.

Module II: Java Object Oriented

Inheritance, Overriding, Polymorphism, Abstraction, Encapsulation, Interfaces, Packages, Exploring java.util package.

Module III: Exception Handling and Threading

Exception Hierarchy, Exception Methods, Catching Exceptions, Multiple catch Clauses, Uncaught Exceptions Java's Built-in Exception.

Creating, Implementing and Extending thread, thread priorities, synchronization suspending, resuming and stopping Threads, Multi-threading.

Module IV : Event Handling And AWT

Event handling Mechanism, Event Model, Event Classes, Sources of Events, Event Listener Interfaces, AWT: Working with Windows, AWT Controls, Layout Managers

Module V: Java Advanced

AppletClass, Architecture, Skeleton, Display Methods., Swings: Japplet, Icons, labels, Text Fields, Buttons, Combo Boxes., Socket Programming: Socket methods, Server Socket methods, Socket Client and Socket Server examples.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

Software Required: JDK1.3

Assignments will be provided for the following:

- Java programs using classes & objects and various control constructs such as loops etc, and data structures such as arrays, structures and functions
- Java programs for creating Applets for display of images and texts.
- Programs related to Interfaces & Packages.
- Input/Output and random files programs in Java.
- Java programs using Event driven concept.
- Programs related to network programming.

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

PYTHON PROGRAMMING LAB

Course Code: NCE6508

Credit Units : 01

Course Contents:

- Setting up python on Windows/Linux/Mac
- First program in python
- Programs related to basic input/output.
- Programs related to variables, strings, numbers
- Programs related to Lists and Tuples
- Programs related to Functions
- Programs related to If Statements
- Programs related to While Loops and Input
- Programs related to Basic Terminal Apps
- Programs related to Dictionaries
- Programs related to Classes
- Programs related to Exceptions
- Programs related to GUI programming
- Using Word, Excel, PDF files in python.
- Web programming in python,
- Case study of application areas of python.

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

SUMMER INTERNSHIP EVALUATION-I

Course Code: NCE6535

Credit Units : 03

Course Objective:

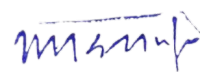

The objective of this course is to provide practical training on some live projects that will increase capability to work on actual problem in industry. This training may undergo in an industrial environment or may be an in house training on some latest software which is in high demand in market. This training will be designed such that it will be useful for their future employment in industry.

Examination Scheme:

Feedback from industry/work place	20
Training Report	40
Viva	15
Presentation	25
Total	100

VHDL PROGRAMMING

Course Code: NCE6512

Credit Units : 02

Course Objective:

VHDL is commonly used as a design-entry language for field-programmable gate arrays and application-specific integrated circuits in electronic design automation of digital circuits. The course aims to discuss the syntax of the language to model a digital system.

Course Contents:

Module I

Fundamental VHDL Units, LIBRARY Declarations, ENTITY, ARCHITECTURE, Introductory Examples, Specification of combinational systems using VHDL, Introduction to VHDL, Basic language element of VHDL, Behavioural Modeling, Data flow modeling, Structural modeling, Subprograms and overloading, VHDL description of gates.

Module II

Data Types; Pre-Defined Data Types, User-Defined Data Types, Subtypes, Arrays, Port Array, Records, Signed and Unsigned Data Types, Data Conversion

Module III: Sequential codes

PROCESS: Signals and Variables, IF, WAIT, CASE, LOOP, CASE versus IF, CASE versus WHEN, Bad Clocking, Using Sequential Code to Design Combinational Circuits
Description and design of sequential circuits using VHDL,

Module IV

Standard combinational modules, Design of a Serial Adder with Accumulator, State Graph for Control Network, design of a Binary Multiplier, Multiplication of a Signed Binary Number, Design of a Binary Divider.

Module V

Micro programmed Controller, Structure of a micro programmed controller, Basic component of a micro system, memory subsystem. Overview of PAL, PLA, FPGA, CPLD.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;
Att: Attendance

VHDL PROGRAMMING LAB

Course Code: NCE6513

Credit Units : 01

Software Required: Mentor Graphics

Topics covered in lab will include:

- Designing Basic Gates.
- Designing Combinational circuits like adder, multiplexer, PLA
- Designing Sequential Circuits like flip-flops, counters, registers.

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

MICROPROCESSOR

Course Code: NCE6515

Credit Units : 03

Course Objective:

This course deals with the systematic study of the Architecture and programming issues of 8085-microprocessor family. The aim of this course is to give the students basic knowledge of the above microprocessor needed to develop the systems using it.

Course Contents:

Module I: Introduction to Microcomputer Systems

Introduction to Microprocessors and microcomputers, Study of 8 bit Microprocessor, 8085 pin configuration, Internal Architecture and operations, interrupts, Stacks and subroutines, various data transfer schemes.

Module II: ALP and timing diagrams

Introduction to 8085 instruction set, advance 8085 programming, Addressing modes, Counters and time Delays, Instruction cycle, machine cycle, T-states, timing diagram for 8085 instruction.

Module III: Memory System Design & I/O Interfacing

Interfacing with 8085. Interfacing with input/output devices (memory mapped, peripheral I/O), Cache memory system. Study of following peripheral devices 8255, 8253, 8257, 8255, 8251.

Module IV: Architecture of 16-Bit Microprocessor

Difference between 8085 and 8086, Block diagram and architecture of 8086 family, pin configuration of 8086, Minimum mode & Maximum mode Operation. Internal architecture of 8086, Bus Interface Unit, Register Organization, Instruction Pointer, Stack & Stack pointer, merits of memory segmentation, Execution Unit, Register Organization.

Module V: Pentium Processors

Internal architecture of 8087, Operational overview of 8087, Introduction to 80186, 80286, 80386 & 80486 processors, Pentium processor.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;
Att: Attendance

SYSTEM PROGRAMMING AND COMPILER CONSTRUCTION

Course Code: NCE6714

Credit Units : 03

Course Objective:

This course provides knowledge to design various system programs.

Course Contents:

Module I: Introduction

Definition, Evolution, Components, Editors: Introduction to system Programming Line editor, Full screen editor and multi window editor. Case study MS-Word, DOS Editor and vi editor.

Module II: Assemblers

First pass and second pass of assembler and their algorithms. Assemblers for CISC Machines: case study x85 & x86 machines.

Module III: Compilers & Macro Processor

Introduction to various translators. Various phases of compiler. Bootstrapping for compilers, Introduction to. Design of a compiler in C++ as Prototype. Basic Macro Processor functions- Macro definition & expansion – Macro Processor Algorithm & Data Structures, conditional – Macro Expansion, Keyword Macro Parameters, Macro with in Macro Implementation, case study MASM and ANSI C Macro language.

Module IV: Debuggers, Loaders and Linkers

Introduction to various debugging techniques. Case study:- Debugging in Turbo C++ IDE. Linkers and Loaders Concept of linking. Case study of Linker in x86 machines. Loading of various loading schemes.

Module V: Operating System

Booting techniques and sub-routines. Design of kernel and various management for OS. Design of Shell and other utilities, (Overview of Unix OS, Difference Between Unix and Linux, Commands in Unix.)-changes made

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

ADVANCED JAVA PROGRAMMING

Course Code: NCE6603

Credit Units : 03

Course Objective:

The objective is to equip the students with the advanced feature of contemporary java which would enable them to handle complex programs relating to managing data and processes over the network. The major objective of this course is to provide a sound foundation to the students on the concepts, precepts and practices, in a field that is of immense concern to the industry and business.

Course Contents:

Module I: Distributed Computing

Introduction to Java RMI, RMI services, RMI client, Running client and server, Introduction of Swing, Swing Components, Look and Feel for Swing Components, Introduction to Multimedia Programming.

Module II: Database Connectivity

ODBC and JDBC Drivers, Connecting to Database with the java.sql Package, Using JDBC Terminology, JDBC with mysql, postgresql.

Module III: Servlet Programming

Introduction to Servlets, Servlet Life Cycle, Servlet based Applications, Servlet and HTML.Filters, jdbc with servelets, session Management techniques in detail.

Module IV: JSP Programming

JSP: Introduction to JSP, JSP implicit objects, JSP based Applications, Java. Net. Login & Logout Example, jdbc with jsp.

Module V: JEE Web Appliaction

The Model-View-Controller Architecture What is Struts, Struts Tags, Creating Beans, Other Bean Tags, Bean Output, Creating HTML Forms, The Action Form class The Action class, Simple Struts: a simple Struts application; Introduction to EJB.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

ADVANCE DATABASE MANAGEMENT SYSTEMS

Course Code: NCE6604

Credit Units : 03

Course Objective:

The objective of this course is to expose the students to the implementation techniques of database system. This course explains techniques for query processing and optimization with transaction and concurrency control techniques

Course Contents:

Module I: Relational Databases

Integrity Constraints revisited, Extended ER diagram, Relational Algebra & Calculus, Functional, Multivalued and Join Dependency, Normal Forms, Rules about functional dependencies.

Module II: Query Processing and Optimization

Valuation of Relational Operations, Transformation of Relational Expressions, Indexing and Query Optimization, Limitations of Relational Data Model, Null Values and Partial Information.

Object Oriented and Object Relational Databases

Modeling Complex Data Semantics, Specialization, Generalization, Aggregation and Association, Objects, Object Identity, Equality and Object Reference, Architecture of Object Oriented and Object Relational Databases

Module III: Parallel and Distributed Databases

Distributed Data Storage – Fragmentation & Replication, Location and Fragment Transparency Distributed Query Processing and Optimization, Distributed Transaction Modeling and concurrency Control, Distributed Deadlock, Commit Protocols, Design of Parallel Databases, Parallel Query Evaluation.

Advanced Transaction Processing

Nested and Multilevel Transactions, Compensating Transactions and Saga, Long Duration Transactions, Weak Levels of Consistency, Transaction Work Flows, Transaction Processing Monitors.

Module IV

Multimedia databases, Databases on the Web and Semi-Structured Data
Case Study: Oracle Xi

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;

DIGITAL COMPUTER ORGANIZATION

Course Code: NCE6605

Credit Units : 03

Course Objective:

The Objective of this course is to expose the students to the fundamentals and the concepts of Digital & Computer Organization and Representation of Information and Basic Building Blocks, Basic Organization, Memory Organization, Input-Output Organization, Processor Organization etc. This course is designed to understand the concepts of Computer Organization for Research & Development as well as for application.

Course Contents:

Module I: Representation of Information and Basic Building Blocks

Number Systems, Binary, Octal, Hexadecimal, Character Codes (BCD, ASCII, EBCDIC), Logic gates, Boolean algebra, K-map Simplification, Half adder, Full adder, Decoders, Multiplexes, Binary Counters, Flip/Flops: SR FF, JK FF, Master Slave FF, T and D FF, Registers: Parallel and Serial Registers, Counters (Synchronous & Asynchronous), ALU, Micro-Operation, ALU-chip.

Module II: Basic Organization

Von Neumann Machine (IAS Computer), Operational flow chart (Fetch, Execute), Instruction Cycle, Organization of Central Processing Unit, Hardwired and Micro programmed control unit, Single Organization, General Register Organization, Stack Organization, Addressing Modes, Instruction Formats, Data transfer & Manipulation, I/O organization, Bus Architecture, Programming Registers.

Module III: Memory Organization

Memory hierarchy, Main Memory (RAM/ROM chips) with mapping, Auxiliary memory, Associative memory and its mapping, Virtual memory, Cache memory with mapping techniques, Memory management hardware.

Module IV: Input-Output organization

Peripheral devices, I/O interface, Direct memory access, Modes of transfer, Priority Interrupt, I/O Processors, Serial Communication, Asynchronous data transfer, Strobe Control, Handshaking, I/O Controllers, CPU-IOP Communication.

Module V: Processor Organization

Introductory Concept of pipeline, Flynn's Classification, Parallel processing. RISC and CISC characteristics, arithmetic pipeline with example.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

MICROPROCESSOR LAB

Course Code: NCE6517

Credit Units : 01

Course Contents:

- To load the numbers 49H and 53H in the memory location 9510 and 9511 respectively and add the contents of memory location 9601
- To write assembly language programming for 8 bit addition with and without carry.
- To write assembly language programming for 8 bit subtraction with and without borrow.
- To write assembly language programming for 8 bit multiplication and division.
- To write assembly language programming for sorting an array of numbers in ascending and descending order.
- To write assembly language programming with additional instructions.
- To write and execute a program using stacks.
- To study and program the programmable peripheral interface (8255) board.
- To study and program the programmable interval timer (8253) board.
- To study and program the programmable DMA controller (8257) board.
- To study and program the programmable interrupt controller (8259) board.

Examination Scheme:

SYSTEM PROGRAMMING AND COMPILER CONSTRUCTION LAB

Course Code: NCE6715

Credit Units : 01

Software Required: Turbo C++

Assignment will be provided for following:

- WAP to determine the length of the machine instructions.
- WAP to differentiate between symbols, literals and tokens.
- WAP to implement Symbol table.
- WAP to implement base table.
- WAP to find the relative addresses.
- Design a macro to perform add operation.
- On the basis of above program display the values of PC, LC and IR.
- Perform programming on loader based programme.
- Perform programming on linker based programme.
- Perform Programming on editor based programme.

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

ADVANCED JAVA PROGRAMMING LAB

Course Code: NCE6608

Credit Units : 01

Programming Language: Java

1. WAP to display label on a frame with the help of JFrame
2. WAP to display six buttons on a panel using JFrame.
3. WAP. To display an image and a string in a label on the JFrame.
4. WAP that implement a JApplet that display a simple label
5. WAP that implement a JApplet and display the following frame
 - a. Customer name
 - b. Customer number
 - c. Age
 - d. Address
6. WAP to access a table Product Master from MS-Access using Java code.
7. WAP that implement a simple servlet program.
8. WAP for authentication, which validate the login-id and password by the servlet code.
9. WAP to connecting a database using user-id and password.
10. WAP to insert data into the database using the prepared statement.
11. WAP to read data from the database using the ResultSet.
12. WAP to read data send by the client (HTML page) using servlet.
13. WAP to include a HTML page into a JSP page.
14. WAP to handle the JSPEException.
15. WAP to read data send by a client (HTML page) using JSP.

Examination Scheme:

IA				EE

CRYPTOGRAPHY AND NETWORK SECURITY

Course Code: NCE6713

Credit Units : 03

Course Objective:

The objective here is to acquaint the students with the application of networking. Detail description of the various TCP/IP protocols and the working of ATM and its performance, Network security and authentication, and various algorithms related to it has been dealt, to get a practical approach.

Course Contents:

Module I: Advanced TCP/IP

TCP Services, TCP format and connection management, Encapsulation in IP, UDP Services, Format and Encapsulation in IP, IP Services, Header format and addressing, Fragmentation and reassembly, Migration to IPv6, Protocols: BOOTP, DHCP, ICMP, IGMP; Internet Routing Protocols: OSPF, RIP, EIGRP, BGP.

Module II: High Speed Networks

Packet Switching Networks; Frame Relay Networks; Asynchronous Transfer Mode (ATM); ATM protocol Architecture; ATM logical connections; ATM cells; ATM Service categories; ATM Adaptation Layer; QoS in ATM and Frame Relay

Module III: High Speed LANs

LAN Ethernet, fast Ethernet, gigabit Ethernet, FDDI, DSL, ADSL

Module IV: Wireless communication

Wireless networks, wireless channels, channel access, network architecture, IEEE 802.11, Bluetooth, Satellite Networks.

Module V: Network Security and Management

Principles of cryptography, Authentication, integrity, key distribution and certification, Access control and Firewalls, attacks and counter measures, security in many layers. Infrastructure for network management, The internet standard management framework, SMI, MIB, SNMP, Security and administration.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE

VLSI DESIGN

Course Code: NCE6612

Credit Units : 02

Course Objective:

In the recent years, IC manufacturing technology has gone through dramatic evolution and changes, continuously scaling to ever smaller dimensions. This scaling has a double impact on the design of ICs. First, the complexity of the designs that can be put on a single die has increased dramatically which led to new design methodologies. At the same time, this plunge into deep submicron space causes devices to behave differently and brings challenging issues to forefront. This course along with the course of Digital Circuits and Systems II and Analog CMOS IC design will give you many of the basic essentials to work in the area of Circuit Design. Since this course takes the latest trends in the industry into account, you will find yourself at a definite edge.

Course Contents:

Module I: Devices and the wire

Diode, dynamic and transient behaviour-diffusion capacitance, SPICE diode model.

MOSFET STATIC BEHAVIOUR: Threshold voltage and its dependence on V_{SB} MOSFET Operation in resistive and saturation region, channel length modulation, Velocity saturation and its impact on sub micron devices, sub threshold conduction, Model for manual analysis, Equivalent resistance for MOSFET in (velocity) saturated region, comparison of equations for PMOS and NMOS, depletion and enhancement device

DYNAMIC BEHAVIOUR: Channel capacitance in different regions of operation, junction capacitance, Level 1 SPICE MODELS for MOS transistors

The Wire: Interconnect parameters: resistance, capacitance and Inductance, Lumped RC model, Elmore Delay

Module II: CMOS Inverter

VTC of an ideal inverter, Switching Model of the CMOS inverter: nMOS /pMOS discharge and charge, VTC of CMOS inverter: PMOS AND NMOS operation in various regions including velocity saturation, Switching threshold, $(W/L)_p/(W/L)_n$ ratio for setting desired V_M with and without velocity saturation, Noise Margins, buffer

Ratioed logic: Pseudo NMOS inverter and PMOS to NMOS ratio for performance, tristate inverter, Resistive load inverter.

Load Capacitance calculations: fan out capacitance, self capacitance calculations: Miller effect, wire capacitance; Improving delay calculation with input slope, Propagation delay: first order analysis, analysis from a design perspective, sizing a chain of inverters for minimum delay, choosing optimum number of stages

Power, Energy and Energy Delay: Dynamic power consumption, Static power, Glitches and power dissipation due to direct path currents, power and delay trade off, Transistor sizing for energy minimization

Module III: Combinational circuits

CMOS LOGIC: Good 0 and poor 0, Good 1 and poor 1, series and parallel N and P switches, 2 and Higher input NAND and NOR gates, Functions of the type $(AB+C(D+E))$ and their complements, XOR and XNOR gates, 2 input Multiplexer, Full Adder; Transistor sizing in CMOS logic for optimal delay,

Pseudo NMOS NAND NOR and other gates and the transistor sizing, Introduction to DSVCL logic, CPL AND/NAND, OR/NOR, XOR/XNOR gates

Logical effort, Electrical Effort, Branching effort, Examples of sizing Combinational logic chains for minimum delay. Pass-transistor logic, pass gate configurations for nmos and pmos, 2 input and 4 input MUX, XOR, XNOR and implementation of general functions like $AB+AB*C+A*C^*$, Robust and Efficient PTL Design, Delay of Transmission Gate chain

Dynamic CMOS design: Precharge and Evaluation, charge leakage, bootstrapping, charge sharing, Cascading Dynamic Gates, DOMINO Logic, Optimization of Domino Logic Gates, simple example circuit implementations of DOMINO logic

Module IV: Sequential Logic circuits

Principle of Bistability, NAND and NOR based SR latch, and clocked SR Latch, JK latch, example of master slave flip flop, CMOS D latch, MUX based Latches, master slave edge triggered register, non ideal clocks, clock overlap, C2MOS register, TSPCR Register, Schmitt Trigger, Pipelining and NORA CMOS

Module V: Layout Design Rules

Introduction to CMOS Process technology, Layout of CMOS inverter, CMOS NAND and NOR gates, Concept of Euler path, and stick diagrams for functions like $(AB+E+CD)^*$

Examination Scheme:

VLSI DESIGN LAB

Course Code: NCE6613

Credit Units : 01

Course Contents:

- Using Design architect and simulate V vs time for CMOS inverter using same W/L ratio for PMOS and NMOS.
- Design and simulate again by Sizing PMOS to NMOS appropriately and repeat experiment 1
- Design and simulate V vs t for 2 input NAND and Nor gates.
- Design and Simulation for general CMOS functions
- One bit full adder simulation
- 2:1 MUX using pass transistor logic
- Other functions using pass transistor logic
- Layout of CMOS inverter
- Layout of NAND and NOR gates
- Design and Simulation SR latch using NAND and NOR representations
- Design and simulate D flip flop

Examination Scheme:

DATA MINING

Course Code: NCE6618

Credit Units : 03

Course Objective:

The objective of this course is to introduce students to Data Warehousing & Data mining technologies that will help To Inspect, Control and Secure Information through Databases.

Course Contents:

Module I: Introduction to Data Warehousing

The need for data ware housing, Operational & Informational Data Stores, Data Warehouse definition & Characteristics, Data Warehouse role & Structure, The cost of warehousing data, Foundation & Roots of Data,

Module II: Data Warehousing Components& Architecture:

Stores, warehouses and marts, Data warehouse database, Sourcing, acquisition, clean up & transformation tools, meta data, Access tools, Data ware house administration & management,. operational & External Database layer, Information access layer, data access layer, metadata layer, process management layer, Application messaging layer, Physical DW layer, Data staging layer.

Module III: Building a Data Warehouse:

Business, Design, Technical & Implementation Considerations, DW project plan. Overview of Mapping the DW to Multiprocessor Architecture, & DBMS Schemas for Decision Support.

Module IV: Metadata and OLAP:

METADATA: Definition, repository, management & trends.

OLAP: Need, guidelines, Multi Relational & Multi-Dimensional: MOLAP, ROLAP, OLAP Tools.

Module V: Data Mining & Visualization:

Techniques to mine the data, Market Basket analysis, Measuring data mining effectiveness, embedding data mining to business process, current limitations and challenges in DM.

Introduction to EIS, The future of Data Mining, Warehousing & Virtualization, Applications: PowerBuilder, Forte. Technical Exposure to Data Mining

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

TEXT BOOKS:

- Alex Berson, Data Warehousing, Data Mining, and Olap, Tata McGraw Hill.
- George M Marakas, Modern Data Warehousing, Mining & Visualization Core Concepts, Pearson Education.

References:

COMPUTER GRAPHICS

Course Code: NCE6702

Credit Units : 03

Course Objective:

The objective of the course is to provide the understanding of the fundamental graphical operations and the implementation on computer, the mathematics behind computer graphics, including the use of spline curves and surfaces. It gives the glimpse of recent advances in computer graphics, user interface issues that make the computer easy, for the novice to use.

Course Contents:

Module I: Introduction to Graphics and Graphics Hardware System

Application of computer graphics, Video Display Devices, Raster Scan Display, Random Scan Display, Input Devices, Graphic Software and graphics standards, Numerical based on Raster and Random scan display, Frame buffer, Display processor.

Module II: Output Primitives and Clipping operations

Algorithms for drawing 2D Primitives lines (DDA and Bresenham's line algorithm), circles (Bresenham's and midpoint circle algorithm), Antialiasing and filtering techniques. Line clipping (cohen-sutherland algorithm), Curve clipping algorithm, and polygon clipping with Sutherland Hodgeman algorithm, Area fill algorithms for various graphics primitives: Scanline fill algorithm, boundary fill algorithm, flood fill algorithm, Polygon representation, various method of Polygon Inside test: Even-Odd method, winding number method, Character generation techniques.

Module III: 2D Geometric transformation

2D Transformation: Basic transformation, Translation, Rotation, Rotation relative to an arbitrary point, scaling, Matrix Representations and Homogeneous coordinates, window to viewport transformation.

Module IV: 3D Geometric transformation

3D Concepts: Parallel projection and Perspective projection, 3D Transformations, composite 3D transformation, co-ordinate transformation, Inverse transformation

Module V: object modeling and Visible Surface detection

fractal geometry methods, fractal dimensions, Geometric construction of deterministic self-similar fractals, Iterated function system to generate fractals. Bezier curves and Bezier surfaces, Bspline curves and surfaces, Visible surface detection method: Basic illumination, diffuse reflection, specular reflection, shadows. Ray tracing method, Depth-buffer method, A-buffer method, Depth-sorting method (painter's algorithm), Binary search partition method, Scan line method,

Module VI: Introduction to multimedia

Design of animation sequences, Computer Animation languages, Elementary filtering techniques and elementary Image Processing techniques, graphics library functions used in animation design

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;
Att: Attendance

ADVANCED COMPUTER NETWORKS

Course Code: NCE6704

Credit Units : 03

Course Objective:

The objective of the course is to provide thorough understanding & in-depth knowledge of concepts in computer networks Such as Internet protocols and routing, local area networks, wireless communications and networking, performance analysis, congestion control, TCP, network address translation, multimedia over IP, switching and routing, mobile IP, multicasting, IPv6. Peer-to-peer networking, network security, and other current research topics. A focus will be placed on wireless networking, reflecting rapid advances in this area. This course motivates the students to explore current research areas in the same field.

Course Contents:

Module I : Introduction to Networks

Networking introduction, Reference Models, TCP/IP, OSI, Addressing, Protocol Layering, Transmission impairment, performance, Switching, Transmission Media, Introduction to MAC, Channel allocation, MAC protocol classification for LAN's, MAN's, MAC protocols for Adhoc N/ws, MAC Protocol for WLAN's(adhoc and sensor n/ws), Introduction to Ethernet protocol (Fast, Gigabit and standard Ethernet).

Module II: Network Layer

Network Layer Design Issues, Routing Algorithms, Congestion Control Algorithms, Quality of Service, Internet Working, Network Layer in Internet. IPv6 basic protocol, extensions and options, support for QoS, security, etc., Changes to other protocols, Application Programming Interface for IPv6.

Module III : Mobile IP

Mobile IP, IP Multicasting. Multicast routing protocols, address assignments, session discovery, etc.

Module IV : Transport Layer and Application Layer

The Transport Protocol: The Transport Service, Elements of transport protocol, a simple Transport Protocol, Internet Transport Protocols UDP, Internet Transport Protocols TCP, TCP extensions for high-speed networks, transaction-oriented applications Performance Issues.

The Application Layer: DNS-(Domain Name System), Electronic Mail, World Wide Web Multimedia.

Module V : Network Security

Overview of network security, Secure-HTTP, SSL, ESP, Key distribution protocols. Digital signatures, digital certificates-mail Security, Web security, Social Issues.

Examination Scheme:

Components	A	CT	H	V/S/O	EE
Weightage (%)	5	10	7	8	70

COMPUTER GRAPHICS LAB

Course Code: NCE6706

Credit Units : 01

Software Required: Turbo C++

Course Contents:

Assignments will be provided for the following:

- Geometrical shapes based on graphics algorithms
- 2D Geometric transformation translation, rotation, scaling, reflection.
- Clipping
- Animation

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

MATLAB PROGRAMMING

Course Code: NCE6708

Credit Units : 02

Understanding The MATLAB Environment, Using the Help System in MATLAB, MATLAB Basics, Linear Algebra; Vectors and Matrices and various operations on them, M files; Scripts and User-defined functions, Plotting, Flow Control and Loops; For and While Loops, If and Case statements, structures, writing basic programs using the above, study of various toolboxes available in matlab and case study of any one tool box.

Recommended Software: MATLAB/Octave

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

SUMMER INTERNSHIP EVALUATION-II

Course Code: NCE6735

Credit Units : 03

Guidelines:

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc.

In order to achieve these objectives, each student will maintain a file (**Internship File**). The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development.

The File will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

The **layout guidelines** for the Project & Seminar Report:

1. File should be in the following specification:

A4 size paper

Font: Arial (10 points) or Times New Roman (12 points)

Line spacing: 1.5

Top & bottom margins: 1 inch/ 2.5 cm

Left & right margins: 1.25 inches/ 3 cm

2. Report Layout: The report should contain the following components:

Front Page

Table of Content

Acknowledgement

Student Certificate

Company Profile (optional)

Introduction

Main Body

References / Bibliography

The File will include **five sections** in the order described below. The content and comprehensiveness of the main body and appendices of the report should include the following:

1. **The Title Page**--Title - An Internship Experience Report For (Your Name), name of internship organization, name of the Supervisor/Guide and his/her designation, date started and completed, and number of credits for which the report is submitted.

2. **Table of Content**--an outline of the contents by topics and subtopics with the page number and location of each section.

3. **Introduction**--short, but should include how and why you obtained the internship experience position and the relationship it has to your professional and career goals.

4. **Main Body**--should include but not be limited to daily tasks performed. Major projects contributed to, dates, hours on task, observations and feelings, meetings attended and their purposes, listing of tools and materials and their suppliers, and photographs if possible of projects, buildings and co-workers.

5. References / Bibliography --This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system

ASSESSMENT OF THE INTERNSHIP FILE

The student will be provided with the Student Assessment Record (SAR) to be placed in front of the Internship File. Each item in the SAR is ticked off when it is completed successfully. The faculty will also assess each item as it is completed. The SAR will be signed by the student and by the faculty to indicate that the File is the student's own work. It will also ensure regularity and meeting the deadlines.

STUDENT ASSESSMENT RECORD (SAR)

1. Range of Research Methods used to obtain information

2. Execution of Research

3. Data Analysis

- Analyse Quantitative/ Qualitative information
- Control Quality

4. Draw Conclusions

Examination Scheme:

Components	V	S	R	FP
Weightage (%)	20	20	20	40

V – Viva, S – Synopsis, FP – Final Presentation, R - Report

MOBILE COMPUTING

Course Code: NCE6710

Credit Units : 03

Course Objective:

The objective of this consortium is to shape and expand a full-scale and sound mobile computing system market. To achieve this, cooperation is required of interests related to communication (network), computer hardware/software, system integrators (including service providers), and the media.

Course Contents:

Module I: Introduction to Personal Communications Services (PCS)

PCS Architecture, Mobility management, Networks signaling.

Global System for Mobile Communication (GSM) system overview: GSM Architecture, Mobility management, Network signaling.

Module II: General Packet Radio Services (GPRS) & Wireless Application Protocol (WAP)

GPRS Architecture, GPRS Network Nodes.

Mobile Data Communication: WLANs (Wireless LANs) IEEE 802.11 standard, Mobile IP.

Wireless Application Protocol (WAP): The Mobile Internet standard, WAP Gateway and Protocols, wireless mark up Languages (WML).

Module III: Third Generation (3G) Mobile Services

Introduction to International Mobile Telecommunications 2000 (IMT 2000) vision, Wideband Code Division Multiple Access (W-CDMA), and CDMA 2000, Quality of services in 3G.

Wireless Local Loop(WLL): Introduction to WLL Architecture, wireless Local Loop Technologies.

Module IV: Global Mobile Satellite Systems

Global Mobile Satellite Systems; case studies of the IRIDIUM and GLOBALSTAR systems.

Module V: Enterprise Networks

Introduction to Virtual Networks, Blue tooth technology, Blue tooth Protocols. Advanced techniques in mobile computing.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

NETWORK AND WIRELESS SECURITY

Course Code: NCE6802

Credit Units : 03

Course Contents:

Module-I: INTRODUCTION

Network concepts – Threats in networks – Network security controls – Importance of security – Threat models – Security concepts – Common mitigation methods

Why is Wireless Different? Introduction ,Protecting the Means Of Communication Protecting Privacy, Promoting Safety ,The Personal and the Public ,Shaking Up the Status Quo ,Understanding Wireless Forecasts ,Reasonable Degrees of Security, Regulatory Environments and Issues ,Security-Related Regulations ,Security Related Market Factors, Guidelines for Security Measures, Cellular Networks and Bearer Technologies ,First-Generation Wireless (1G), Second-Generation Wireless (2G), Spread Spectrum ,Code Division Multiple Access (CDMA) ,Time Division Multiple Scss (TDMA) ,Global System for Mobile Communications (GSM) ,Third-Generation Wireless (3G) ,Short Message Service (SMS) ,Fourth-Generation Wireless (4G)

Module-II: The Wireless Local Area Network (WLAN)

Wireless Transmission Media ,Infrared Systems ,Narrowband Radio Systems ,Wideband Radio Systems: SpreadSpectrum ,Frequency-Hopping Spread Spectrum (FHSS) ,Direct-Sequence Spread Spectrum (DSSS) ,WLAN Products and Standards—Today’s Leaders? ,802.11 Security? ,IEEE 802.11b ,Securing WLANs ,Eavesdropping ,Unauthorized Access ,Interference and Jamming ,Physical Threats ,Countermeasures ,Frequency-Hopping Spread Spectrum (FHSS), Direct-Sequence Spread Spectrum (DSSS) ,Infrared (IR) ,Narrowband ,The Infamous WEP ,Encryption ,Authentication ,Wired Equivalency Protocol Flaws Too Public ,Other Authentication Techniques ,Physical Security.

Module-III: Wireless Application Protocol(WAP)

Comparison of the TCP/IP, OSI, and WAP Models, How WAP Works ,The Security Status of WAP ,Viruses ,Authorization ,Non-repudiation ,Authentication ,Secure Sessions ,Security Products ,Securant Technologies ClearTrust Control ,WAP Security Architecture ,Marginal Security ,Wireless Access to the Internet ,Wireless Middleware

Module-IV: Wireless Transport Layer Security (WTLS)

Secure Socket Layer, Record Protocol, SSL Handshake Protocol ,Transport Layer Security, Advantages and Disadvantages of SSL/TLS ,Netscape ,Microsoft ,Entrust ,EAP-TLS ,Alternatives to SSL/TLS , IP Security (IPSec) ,Authentication Header Protocol (AH) ,Encapsulating Security Payload (ESP) ,Transport and Tunnel Modes, Secure Shell (SSH) ,SSH Transport Layer Protocol ,SSH Versus TLS Implementations ,Light Extensible Authentication Protocol (LEAP) ,Wireless Transport Layer Security and WAP ,Understanding Wireless Transport Layer Security ,WTLS Handshake Protocol ,WTLS Alert Protocol ,WTLS Change Cipher Protocol ,Pros and Cons of WTLS ,WTLS Vulnerabilities ,Implementations of WTLS

Module-V: Bluetooth Security

Bluetooth Basic Specifications ,Bluetooth Technology, Bluetooth Specification Development ,Design Decisions ,Piconets ,Bluetooth Security Architecture ,Scatternets ,The Bluetooth stack ,Security Functions at the Baseband Layer ,Security Functions of the Service Discovery Protocol ,Security Functions at the Link Layer ,Frequency-Hopping ,

CYBER CRIME AND IT LAW

Course Code: NCE6803

Credit Units : 03

Course Contents:

Module-I: Power of Arrest Without Warrant Under the IT Act, 2000: A Critique

Crimes of this Millennium, Section 80 of the IT Act, 2000 – A Weapon or a Farce, Forgetting the Line Between Cognizable and Non-Cognizable Offences, Necessity of Arrest without Warrant from Any Place, Public or Otherwise, Checks and Balances Against Arbitrary Arrests, Arrest for “About to Commit” an Offence Under the IT Act: A Tribute to Draco, Arrest, But No Punishment!

Module-II: Cyber Crime and Criminal Justice: Penalties, Adjudication and Appeals Under the IT Act, 2000

Concept of ‘Cyber Crime’ and the IT Act, 2000, Hacking, Teenage Web vandals, Cyber Fraud and Cyber cheating, Virus on the Internet, Defamation, Harassment and E-mail Abuse, Cyber Pornography, Other IT Act Offences, Monetary Penalties, Adjudication and Appeals Under IT Act, 2000, Network Service Providers, Jurisdiction and cyber Crimes, Nature of Cyber Criminality, Strategies to Tackle Cyber Crime and Trends, Criminal Justice in India and Implications on Cyber Crime.

Module-III: Jurisdiction in the Cyber World

Questioning the Jurisdiction and Validity of the Present Law of Jurisdiction, Civil Law of Jurisdiction in India, Cause of Action, Jurisdiction and the Information Technology Act, 2000, Foreign Judgments in India, Place of Cause of Action in Contractual and IPR Disputes, Exclusion Clauses in Contracts, Abuse of Exclusion Clauses, Objection of Lack of Jurisdiction, Misuse of the Law of Jurisdiction, Legal Principles on Jurisdiction in the United States of America, Jurisdictional Disputes W.R.T. the Internet in the United States of America.

Module-IV: Battling Cyber Squatters and copyright Protection in the Cyber World

Concept of Domain Name and Reply to Cyber Squatters, Meta-Tagging, Legislative and Other Innovative Moves Against Cyber Squatting, The Battle Between Freedom and Control on the Internet, Works in Which Copyright Subsists and Meaning of Copyright, Copyright Ownership and Assignment, Licence of Copyright, Copyright Term and Respect for Foreign Works, Copyright Infringement, Remedies and Offences, Copyright Protection of Content on the Internet; Copyright Notice, Disclaimer and Acknowledgement, Downloading for Viewing Content on the Internet, Hyper-linking and Framing, Liability of ISPs for Copyright violations in the Cyber World: Legal Developments in the US, Napster and its Cousins: A Revolution on the Internet but a Crisis for Copyright Owners, Computer Software Piracy.

Module-V: Protection of Cyber Consumers in India

Are Cyber consumers Covered Under the Consumer Protection Act, Goods and Services, Consumer Complaint, Defect in Goods and Deficiency in Services, Restrictive and Unfair Trade Practices, Instances of Unfair Trade Practices, Reliefs Under CPA, Beware Consumers, Consumer Foras, Jurisdiction and Implications on Cyber Consumers in India, Applicability of CPA to Manufacturers, Distributors, Retailers and Service Providers Based in Foreign Lands Whose Goods are Sold or Services Provided to a consumer in India.

CYBER CRIME INVESTIGATION & FORENSICS

Course Code: NCE6804

Credit Units : 03

Course Contents:

Module-I: Computer Forensics and Investigations as a Profession, Understanding

Computer Forensics ,Computer Forensics Versus Other Related Disciplines ,A Brief History of Computer Forensics, Understanding Case Law ,Developing Computer Forensics Resources ,Preparing for Computer Investigations, Understanding Law Enforcement Agency Investigations, Following the Legal Processes, Understanding Corporate Investigations, Establishing Company Policies, Displaying Warning Banners ,Designating an Authorized Requester, Conducting Security Investigations, Distinguishing Personal and Company Property ,Maintaining Professional Conduct.

Module-II: Understanding Computer Investigations

Preparing a Computer Investigation, An Overview of a Computer Crime ,An Overview of a Company Policy Violation ,Taking a Systematic Approach ,Assessing the Case ,Planning Your Investigation ,Securing Your Evidence ,Procedures for Corporate High-Tech Investigations, Employee Termination Cases, Internet Abuse Investigations-mail Abuse Investigations, Attorney-Client Privilege Investigations, Media Leak Investigations, Industrial Espionage Investigations, Interviews and Interrogations in High-Tech Investigations ,Understanding Data Recovery Workstations and Software, Setting Up Your Workstation for Computer Forensics ,Conducting an Investigation, Gathering the Evidence ,Understanding Bit-stream Copies ,Acquiring an Image of Evidence Media, Using ProDiscover Basic to Acquire a USB Drive ,Analyzing Your Digital Evidence, Completing the Case, Critiquing the Case

Module-III: Data Acquisition

Understanding Storage Formats for Digital Evidence, Raw Format, Proprietary Formats, Advanced Forensic Format ,Determining the Best Acquisition Method, Contingency Planning for Image Acquisitions ,Using Acquisition Tools ,Windows XP Write-Protection with USB Devices, Acquiring Data with a Linux Boot CD, Capturing an Image with ProDiscover Basic ,Capturing an Image with AccessData FTK Imager ,Validating Data Acquisitions ,Linux Validation Methods, Windows Validation Methods ,Performing RAID Data Acquisitions ,Understanding RAID ,Acquiring RAID Disks ,Using Remote Network Acquisition Tools ,Remote Acquisition with ProDiscover, Remote Acquisition with EnCase Enterprise , Remote Acquisition with R-Tools R-Studio ,Remote Acquisition with WetStone Livewire, Remote Acquisition with F-Response ,Remote Acquisition with Runtime Software ,Using Other Forensics Acquisition Tools, SnapBack DataArrest ,NTI SafeBack, DIBS USA RAID ,Look Investigator I imager ,ASRData SMART ,Australian Department of Defence PyFlag,

Module-IV: Processing Crime and Incident Scenes

Identifying Digital Evidence, Understanding Rules of Evidence ,Collecting Evidence in Private-Sector Incident Scenes, Processing Law Enforcement Crime Scenes ,Understanding Concepts and Terms Used in Warrants ,Preparing for a Search, Identifying the Nature of the Case, Identifying the Type of Computing System, Determining Whether You Can Seize a Computer, Obtaining a Detailed Description of the Location, Determining Who Is in Charge, Using Additional Technical Expertise ,Determining the Tools You Need ,Preparing the Investigation Team, Securing a Computer Incident or Crime Scene ,Seizing Digital Evidence at the Scene ,Preparing to Acquire Digital Evidence, Processing an Incident or Crime Scene ,Processing Data Centers with RAID Systems ,Using a Technical Advisor, Documenting Evidence in the Lab, Processing and Handling Digital Evidence ,Storing Digital Evidence, Evidence Retention and Media Storage Needs, Documenting Evidence ,Obtaining a Digital Hash,

INTRUSION DETECTION AND PREVENTION SYSTEM

Course Code: NCE6805

Credit Units : 03

Course Contents:

Module-I: Network Attacks: Attack Taxonomies, Probes: IPSweep and PortSweep, NMap, MScan, SAINT, Satan Privilege Escalation Attacks: Buffer Overflow Attacks, Misconfiguration Attacks, Race-condition Attacks, Man-in-the-Middle Attacks. Social Engineering Attacks. Denial of Service (DoS) and Distributed Denial of Service (DDoS) Attacks: Detection Approaches for DoS and DDoS Attacks, Prevention and Response for DoS and DDoS Attacks, Examples of DoS and DDoS Attacks. Worms Attacks: Modeling and Analysis of Worm Behaviors, Detection and Monitoring of Worm Attacks, Worms Containment, Examples of Well Known Worm Attacks. Routing Attacks: OSPF Attacks, BGP Attacks.

Module-II: Detection Approaches: Misuse Detection: Pattern Matching, Rule-based Techniques, State-based Techniques, Techniques based on Data Mining Anomaly Detection: Advanced Statistical Models, Rule based Techniques, Biological Models, Learning Models Specification-based Detection, Hybrid Detection

Module-III: Theoretical Foundation of Detection: Taxonomy of Anomaly Detection Systems, Fuzzy Logic, Bayes Theory, Artificial Neural Networks, Support Vector Machine (SVM), Evolutionary Computation, Association Rules, Clustering, Signal Processing Techniques Based Models, Comparative Study of Anomaly Detection Techniques.

Module-IV: Architecture and Implementation: Centralized, Distributed, Cooperative Intrusion Detection, Alert Management and Correlation: Data Fusion, Alert Correlation, Cooperative Intrusion Detection

Module-V: Evaluation Criteria & Intrusion Response:

Accuracy, Performance, Completeness, Timely Response, Adaptation and Cost-Sensitivity, Intrusion Tolerance and Attack Resistance, Test, Evaluation and Data Sets.

Response Type, Response Approach, Survivability and Intrusion Tolerance, case study of any commercial IDS.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

CRYPTOGRAPHY FOUNDATION LAB

Course Code: NCE6806

Credit Units : 01

Course Contents:

- Program to implement division theorem
- checking number is prime or composite using simple logic
- Implement Miller Rabin Primality Algorithm
- Implement Euclid and Extended Algorithm.
- Implement Chinese Remainder Theorem
- Implement Baby Step Giant Step Algorithm.
- Implement at least 2 algorithms for random number generation. One is Blum Blum Shub.
- Implement Modular Exponentiation Algorithm
- Implement algorithm for modular linear equation solver.
- Implement Fermat's and Euler's theorem.
- Implement Fermat's Factorization method.
- Few programs based on Probability Theory and theorems

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

NETWORK & WIRELESS SECURITY LAB

Course Code: NCE6808

Credit Units : 01

Course Contents:

- Learn to install wine / virtual box/vmware or any other equivalent software on the host os.
- Perform an experiment to grab a banner with telnet and perform the task using netcat utility.
- Banner grabbing is a technique to determine which application or service is running on the specified port by attempting to make a connection to this host.
- Perform an experiment for port scanning with nmap, superscan or any other software.
- Using nmap 1)find open ports on a system 2) find the machines which are active 3)find the version of remote os on other systems 4) find the version of s/w installed on other system
- Perform an experiment on active and passive fingerprinting using xprobe2 and nmap.
- Perform an experiment to demonstrate how to sniff for router traffic by using the tool wireshark
- Perform an experiment how to use dumpsec.
- Perform an wireless audit of an access point / router and decrypt wep and wpa.
- Perform an experiment to sniff traffic using arp poisoning.
- Generating password hashes with openssl

Examination Scheme:

IA					EE	
A	PR	LR	V		PR	V
5	10	10	5		35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

RESEARCH METHODOLOGY AND TECHNICAL REPORT WRITING

Course Code: NCE6809

Credit Units : 02

Course Objectives:

The course will enhance scientific , technical and research writing skills and impart knowledge about various stages of research process, statistical analysis, statistical tests and their applications in statistical decision making.

Course Contents:

Module I: Introduction to research: Definition, motivation, need, objectives, significance and characteristics of research; types of research; steps in research process; planning a research proposal; literature review, web searching.

Module II: Population and sample, parameter and statistic, sampling and data collection, sampling design: steps, types, sample size, sampling methods, large and small samples, primary and secondary data, data processing and analysis. Sample surveys and questionnaire designing, scaling techniques.

Module III: Dependent and independent variables, univariate, bivariate and multivariate analysis, means-arithmetic, geometric and harmonic; measure of dispersion of data, standard deviation, variance, coefficient of variation and degree of freedom. Hypothesis testing: null hypothesis and alternate hypothesis, errors in hypothesis testing, significance and confidence levels, parametric tests and non-parametric tests, one-tailed and two-tailed tests, analysis of variance. Regression analysis and curve fitting, method of least-squares, explained and unexplained variations, coefficient of correlation, coefficient of determination.

Module IV: Technical/scientific/research report writing: structure and components of scientific reports, formats of dissertations, research report, report writing skills, report preparation, referencing , bibliography and footnotes. Making presentation-use of visual aids and PPTs. Publication of research papers, citations,. Intellectual property rights and copy rights, plagiarism, patents and patent laws, commercialization and ethical issues.

Examination Scheme:

Attendance	Assignment/Library consultation / Thesis writing	Class test	Final Exam	Total
5	15	10	70	100

Text Books:

- Blake, G. and Bly, R.W. 1993, The Elements of Technical Writing. MacMillan, New York
- Booth, V. 1981. Writing a Scientific Paper and Speaking at Scientific Meetings. The Biochemical Society, London
- Chawla,D and Sondhi, N. 2016, Research Methodology- Concepts and Cases. Vikas Publishing House Pvt Ltd. New Delhi
- Kothari, C.R.2008. Research Methodology- Methods and Techniques, 2nd.ed. New Age International Publishers, New Delhi.

MAJOR PROJECT

Course Code: NCE6837

Credit Units : 08

GUIDELINES FOR PROJECT FILE

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critiqued by the faculty guide and corrected by the student at each stage.

The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

In general, the File should be comprehensive and include

A short account of the activities that were undertaken as part of the project;

A statement about the extent to which the project has achieved its stated goals.

A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;

Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;

Any problems that have arisen that may be useful to document for future reference.

➤ Report Layout

The report should contain the following components:

➤ Title or Cover Page

The title page should contain the following information: Project Title; Student's Name; Course; Year; Supervisor's Name.

➤ Acknowledgements(optional)

Acknowledgment to any advisory or financial assistance received in the course of work may be given.

➤ Abstract

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project

➤ Table of Contents

Titles and subtitles are to correspond exactly with those in the text.

➤ Introduction

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

➤ Materials and Methods

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

This section should aim at experimental designs, materials used. Methodology should be mentioned in details including modifications if any.

➤ **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing these section, emphasis should be given on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary never write in “point” form.

➤ **Conclusion**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

➤ **Future prospects**

➤ **Appendices**

The Appendix contains material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

➤ **References / Bibliography**

This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

Examples

For research article

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infect*, **8** (suppl 1): 116–117.

For book

Kowalski, M. (1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63–67

ASSESSMENT OF THE PROJECT FILE

Essentially, marking will be based on the following criteria: the quality of the report, the technical merit of the project and the project execution.

Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project.

Project execution is concerned with assessing how much work has been put in.

The File should fulfill the following *assessment objectives*:

Range of Research Methods used to obtain information

Execution of Research

BIOMETRIC SYSTEMS AND BIOMETRIC IMAGE PROCESSING

Course Code: NCE6901

Credit Units : 03

Course Contents:

Module-I:

Introduction: Biometric fundamentals – Biometric technologies – Biometrics Vs traditional techniques – Characteristics of a good biometric system – Benefits of biometrics – Key biometric processes: verification, identification and biometric matching – Performance measures in biometric systems, FAR, FRR, FTE rate, EER and ATV rate, Applications of Biometric Systems, Security and Privacy Issues.

Physiological Biometrics : Leading technologies : Finger-scan – Facial-scan – Iris-scan – Voice-scan – components, working principles, competing technologies, strengths and weaknesses – Other physiological biometrics : Hand-scan, Retina-scan – components, working principles, competing technologies, strengths and weaknesses – Automated fingerprint identification systems.

Module-II:

Behavioral Biometrics: Leading technologies: Signature-scan – Keystroke scan – components, working principles, strengths and weaknesses.

Privacy and Standards in Biometrics: Assessing the Privacy Risks of Biometrics – Designing Privacy-Sympathetic Biometric Systems – Need for standards – different biometric standards.

Module-III:

Fundamentals of Image Processing: Digital Image representation - Fundamental steps in Image Processing Image Enhancement: The Spatial Domain Methods, The Frequency Domain Methods – Image Segmentation: Pixel Classification by Thresholding, Histogram Techniques, Smoothing and Thresholding - Gradient Based Segmentation: Gradient Image, Boundary Tracking, Laplacian Edge Detection.

Module-IV:

Fingerprint Biometrics: Fingerprint Patterns, Fingerprint Features, Fingerprint Image, width between two ridges - Fingerprint Image Processing - Minutiae Determination - Fingerprint Matching: Fingerprint Classification, Matching policies.

Module-V:

Iris Biometrics: Iris System Architecture, Definitions and Notations - Iris Recognition: Iris location, Doubly Dimensionless Projection, Iris code, Comparison - Coordinate System: Head Tilting Problem, Basic Eye Model, Searching Algorithm, Texture Energy Feature.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

SOFTWARE VULNERABILITY ANALYSIS

Course Code: NCE6902

Credit Units : 04

Course Contents:

Module-I: Introduction to Software Security

It's All about the Software, Dealing with Widespread Security Failures, Bugtraq, CERT Advisories, RISKS Digest, Technical Trends Affecting Software Security, The ilities, What is Security?, Isn't That Just Reliability?, Penetrate and Patch Is Bad, On Art and Engineering, Security Goals, Prevention, Traceability and Auditing, Monitoring, Privacy and Confidentiality, Multilevel Security, Anonymity, Authentication, Integrity, Know Your Enemy: Common Software Security Pitfalls, Software Project Goals, Conclusion. **Managing Software Security Risk:** An Overview of Software Risk Management for Security, The Role of Security Personnel, Software Security Personnel in the Life Cycle, Deriving Requirements, Risk Assessment, Design for Security, Implementation, Security Testing, A dose of Reality, Getting People to Think about Security, Software Risk management in Practice, When Development Goes Astray, When Security Analysis Goes Astray, The Common Criteria.

Module-II: On Open Source and Closed Source

Security by Obscurity, Reverse Engineering, Code Obfuscation, Security for Shrink-Wrapped Software, Security by Obscurity Is No Panacea, The Flip Side: Open- Source Software, Is the "Many-Eyeballs Phenomenon" Real?. Why Vulnerability Detection Is Hard, Other Worries, On Publishing Cryptographic Algorithms, Two More Open-Source Fallacies, The Microsoft Fallacy, The Java Fallacy, An Example: GNU Mailman Security, More Evidence: Trojan Horses, To Open Source or Not to Open Source, Another Security Lesson from Buffer Overflows, Beating the Drum.

Guiding Principles for Software Security: Principle 1: Secure the Weakest Link, Principle 2: Practice Defense in Depth, Principle 3: Fail Securely, Principle 4: Follow the Principle of Least Privilege, Principle 5: Compartmentalize, Principle 6: Keep It Simple, Principle 7: Promote Privacy, Principle 8: Remember That Hiding Secrets is Hard, Principle 9: Be Reluctant to Trust, Principle 10: Use Your Community Resources Conclusion.

Module-III: Buffer Overflows & Access Control

What Is a Buffer Overflow?, Why Are Buffer Overflows a Security Problem?, Defending against Buffer Overflow, Major Gotchas, Internal Buffer Overflows, More Input Overflows, Other Risks, Tools That Can Help, Smashing Heaps and Stacks, Heap Overflows, Stack Overflows, Decoding the Stack, To Infinity ... and Beyond!, Attack Code, A UNIX Exploit, What About Windows?The UNIX Access Control Model, How UNIX Permissions Work, Modifying File Attributes, Modifying Ownership, The unask, The Programmatic Interface, Setuid Programming, Access Control in Windows NT, Compartmentalization, Fine-Grained Privileges.

Module-IV: NETWORKING

OSI Model, Sockets, Socket Functions, Socket Addresses, Network Byte Order, Internet Address Conversion, A Simple Server Example, A Web Client Example, A Tinyweb Server, Peeling Back the Lower Layers, Data-Link Layer, Network Layer, Transport Layer , Network Sniffing, Raw Socket Sniffer, libpcap Sniffer, Decoding the Layers, Active Sniffing, Denial of Service, SYN Flooding, The Ping of Death, Teardrop, Ping Flooding, Amplification Attacks, Distributed DoS Flooding, TCP/IP Hijacking, RST Hijacking, Continued Hijacking, Port Scanning, Stealth SYN Scan, FIN, X-mas, and Null Scans, Spoofing Decoys, Idle Scanning, Proactive Defense (shroud), Reach Out and Hack Someone, Analysis with GDB, Almost Only Counts with Hand Grenades, Port-Binding Shellcode.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module-V: SHELLCODE

Assembly vs. C, Linux System Calls in Assembly, The Path to Shellcode, Assembly Instructions Using the Stack, Investigating with GDB, Removing Null Bytes, Shell-Spawning Shellcode, A Matter of Privilege, And Smaller Still, Port-Binding Shellcode, Duplicating Standard File Descriptors, Branching Control Structures, Connect-Back Shellcode.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

Recommended Books:

APPLIED CRYPTOGRAPHY

Course Code: NCE6903

Credit Units : 03

Course Contents:

Module-I:

Introduction to security attacks, services and mechanism, Classical encryption techniques: substitution ciphers and transposition ciphers, cryptanalysis, steganography, Stream and block ciphers. Modern Block Ciphers: Block ciphers principles, Shannon's theory of confusion and diffusion, fiestal structure, Data encryption standard (DES), Strength of DES, Idea of differential cryptanalysis, block cipher modes of operations, Triple DES

Module-II:

Advanced Encryption Standard (AES) encryption and decryption, Analysis, Principals of public key crypto systems, RSA algorithm, security of RSA. Rabin cryptosystem, Elgamal cryptosystem, Elliptical Curve cryptography,

Module-III:

Message Authentication Codes: Authentication requirements, authentication functions, message authentication code, Random Oracle Model , hash functions, birthday attacks, security of hash functions, Secure hash algorithm (SHA),SHA-512, Whirlpool, Digital Signatures: Digital Signatures, Elgamal Digital Signature Techniques, Digital signature standards (DSS).

Module-IV:

Key Management and distribution: Symmetric key distribution, Diffie-Hellman Key Exchange, Public key distribution, X.509 Certificates, Public key Infrastructure. Entity authentication, Authentication Applications: Kerberos,

Module-V:

IP Security: Architecture, Authentication header, Encapsulating security payloads, combining security associations, key management. Introduction to Secure Socket Layer, Secure electronic transaction (SET).

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

WEB APPLICATION & PENETRATION TESTING

Course Code: NCE6906

Credit Units : 03

Course Contents:

Module-I: Introduction to Web Applications and Security

The Web Application Architecture ,A Brief Word about HTML ,Transport: HTTP ,The Web Client ,The Web Server,The Web Application ,The Database ,Complications and Intermediaries ,The New Model: Web Services ,Potential Weak Spots ,The Methodology of Web Hacking ,Profile the Infrastructure ,Attack Web Servers ,Survey the Application,Attack the Authentication Mechanism ,Attack the Authorization Schemes , Perform a Functional Analysis,Exploit the Data Connectivity,Attack the Management Interfaces,Attack the Client,Launch a Denial-of-Service Attack Profiling: Server Discovery,Intuition ,Internet Footprinting, DNS Interrogation Ping,Discovery Using Port Scanning , Dealing with Virtual Servers, Service Discovery , Server Identification,Dealing with SSL.

Module-II: Hacking Web Servers

Common Vulnerabilities by Platform ,Apache,Microsoft Internet Information Server (IIS), Attacks Against IIS Components, Attacks Against IIS, Escalating Privileges on IIS, Netscape Enterprise Server , Other Web Server Vulnerabilities , Miscellaneous Web Server Hacking Techniques , Automated Vulnerability Scanning Software ,Whisker, Nikto , twwwwscan/arirang , Stealth HTTP Scanner, Typhon , WebInspect , AppScan , FoundScan Web Module , Denial of Service Against Web Servers,

Module-III: Surveying the Application

Documenting Application Structure , Manually Inspecting the Application , Statically and Dynamically Generated Pages, Directory Structure , Helper Files , Java Classes and Applets , HTML Comments and Content ,Forms, Query Strings , Back-End Connectivity , Tools to Automate the Survey, lynx , Wget,Teleport Pro, Black Widow, WebSleuth, Common Countermeasures , A Cautionary Note, Protecting Directories,Protecting Include Files, Miscellaneous Tips. Authentication: Authentication Mechanisms, HTTP Authentication: Basic and Digest, Forms-Based Authentication, Microsoft Passport, Attacking Web Authentication,Password Guessing, Session ID Prediction and Brute Forcing, Subverting Cookies,Bypassing SQL-Backed Login Forms,Bypassing Authentication.

Module-IV: Authorization

The Attacks, Role Matrix, The Methodology , Query String, POST Data , Hidden Tags, URI,HTTP Headers,Cookies, Final Notes,Case Study: Using Curl to Map Permissions, Apache Authorization, IIS AuthorizationAttacking Session State Management:Client-Side Techniques, Hidden Fields, The URL,HTTP Headers and Cookies, Server-Side Techniques, Server-Generated Session IDs, Session Database, SessionID Analysis, Content Analysis, Time Windows.

Module-V: Input Validation Attacks

Expecting the Unexpected, Input Validation EndGame, Where to Find Potential Targets,Bypassing Client-Side Validation Routines , Common Input Validation Attacks , Buffer Overflow, Canonicalization (dot-dot-slash),Script Attacks , Boundary Checking, Manipulating the Application , SQL Injection and Datastore Attacks,Command Execution, Common Side Effects,Common Countermeasures. Attacking Web Datastores: A SQL Primer,SQL Injection, Common Countermeasures. Web Client Hacking :The Problem of Client-Side Security,Attack Methodologies ,Active Content Attacks ,Java and JavaScript ,ActiveX,Cross-Site Scripting,Cookie Hijacking ,Case Study #: From the URL to the Command Line and Back,Case Study #: The Cross-Site Scripting Calendar

MALWARE ANALYSIS IN NETWORK SECURITY

Course Code: NCE6907

Credit Units : 03

Course Contents:

Module-I: BASIC STATIC TECHNIQUES

Antivirus Scanning: A Useful First Step, Hashing: A Fingerprint for Malware, Finding Strings, Packed and Obfuscated Malware, Packing Files, Detecting Packers with PEiD, Portable Executable File Format, Linked Libraries and Functions, Static, Runtime, and Dynamic Linking, Exploring Dynamically Linked Functions with Dependency Walker, Imported Functions, Exported Functions, Static Analysis in Practice, PotentialKeylogger.exe: An Unpacked Executable, PackedProgram.exe: A Dead End, The PE File Headers and Sections, Examining PE Files with PEView, Viewing the Resource Section with Resource Hacker, Using Other PE File Tools, PE Header Summary

Module-II: VIRTUAL MACHINES & DYNAMIC ANALYSIS

The Structure of a Virtual Machine, Creating Your Malware Analysis Machine, Configuring VMware, Using Your Malware Analysis Machine, Connecting Malware to the Internet, Connecting and Disconnecting Peripheral Devices, Taking Snapshots, Transferring Files from a Virtual Machine, The Risks of Using VMware for Malware Analysis, Record/Replay: Running Your Computer in Reverse, Sandboxes: The Quick-and-Dirty Approach Using a Malware Sandbox, Sandbox Drawbacks, Running Malware, Monitoring with Process Monitor, The Procmon Display, Filtering in Procmon, Viewing Processes with Process Explorer, The Process Explorer Display, Using the Verify Option, Comparing Strings, Using Dependency Walker, Analyzing Malicious Documents, Comparing Registry Snapshots with Regshot, Faking a Network, Using ApateDNS, Monitoring with Netcat, Packet Sniffing with Wireshark, Using INetSim, Basic Dynamic Tools in Practice,

Module-III: RECOGNIZING C CODE CONSTRUCTS IN ASSEMBLY

Overview of working with IDA Pro, Global vs Local Variables, Disassembling Arithmetic Operations, Recognizing if Statements, Analyzing Functions Graphically with IDA Pro, Recognizing Nested if Statements, Recognizing Loops, Finding for Loops, Finding while Loops, Understanding Function Call Conventions, Cdecl, Stdcall, fastcall, Push vs Move, Analyzing switch Statements, If Style, Jump Table, Disassembling Arrays, Identifying Structs, Analyzing Linked List Traversal,

Module-IV: ANALYZING MALICIOUS WINDOWS PROGRAMS

The Windows API, Types and Hungarian Notation, Handles, File System Functions, Special Files, The Windows Registry, Registry Root Keys, Regedit, Programs that Run Automatically, Common Registry Functions, Analyzing Registry Code in Practice, Registry Scripting with reg Files, Networking APIs, Berkeley Compatible Sockets, The Server and Client Sides of Networking, The WinINet API, Following Running Malware, DLLs, Processes, Threads, Interprocess Coordination with Mutexes, Services, The Component Object Model, Exceptions: When Things Go Wrong, Kernel vs User Mode, The Native API,

Module-V: MALWARE BEHAVIOR & COVERT MALWARE LAUNCHING

Downloaders and Launchers, Backdoors, Reverse Shell, RATs, Botnets, RATs and Botnets Compared, Credential Stealers, GINA Interception, Hash Dumping, Keystroke Logging, Persistence Mechanisms, The Windows Registry, Trojanized System Binaries, DLL Load-Order Hijacking, Privilege Escalation, Using SeDebugPrivilege, Covering Its Tracks—User-Mode Rootkits, IAT Hooking, Inline Hooking, Launchers, Process Injection, DLL Injection, Direct Injection, Process Replacement, Hook Injection,

WEB SECURITY

Course Code: NCE6908

Credit Units : 03

Course Contents:

Module-I: The E-Commerce Playground

Web Languages: The Babylon of the 21st Century, Languages of the Web, HTML, Dynamic HTML (DHTML).XML,XHTML,Perl,PHP,ColdFusion,Active Server Pages,CGI,Java. Web and Database Servers: Web Servers,Apache,Microsoft's Internet Information Server (IIS),Database Servers,Microsoft SQL Server, Oracle.

Module-II: Shopping Carts and Payment Gateways

Evolution of the Storefront,Electronic Shopping,Shopping Cart Systems,Scope and Lifetime of an Electronic Shopping Cart,Collecting, Analyzing, and Comparing Selected Components,Keeping Track of the Total Cost,Change of Mind,Processing the Purchase,Implementation of a Shopping Cart Application,Product Catalog,Session Management,Database Interfacing,Integration with the Payment Gateway,Examples of Poorly Implemented Shopping Carts,Carelllo Shopping Cart,DCShop Shopping Cart,Hassan Consulting's Shopping Cart,Cart32 and Several Other Shopping Carts,Processing Payments,Finalizing the Order,Method of Payment,Verification and Fraud Protection,Order Fulfillment and Receipt Generation,Overview of the Payment Processing System,Innovative Ways to Combat Credit Card Fraud,Order Confirmation Page,Payment Gateway Interface,Transaction Database Interface,Interfacing with a Payment Gateway—An Example,Payment System Implementation Issues,Integration,Temporary Information,SSL,Storing User Profiles,Vulnerabilities Caused by Poor Integration of Shopping Cart and Payment Gateway,PayPal—Enabling Individuals to Accept Electronic Payments,

Module-III: HTTP and HTTPS: The Hacking Protocols,Protocols of the Web,HTTP,HTTPS (HTTP over SSL).

URL: The Web Hacker's Sword: URL Structure,Web Hacker Psychology,URLs and Parameter Passing. URL Encoding, Meta-Characters,Specifying Special Characters on the URL String.,Meta-Characters and Input Validation,Unicode Encoding,The Acme Art, Inc. Hack,Abusing URL Encoding,Unicode Encoding and Code Red's Shell Code,Unicode Vulnerability,The Double-Decode or Superfluous Decode Vulnerability,HTML Forms,Anatomy of an HTML Form,Input Elements,Parameter Passing Via GET and POST,Case Study: Reconnaissance Leaks Corporate Assets.

Module-IV: Web: Under (the) Cover.

The Components of a Web Application,The Front-End Web Server,The Web Application Environment. The Database Server,Wiring the Components,The Native Application Processing Environment.,Web Server APIs and Plug-Ins,URL Mapping and Internal Proxying,Proxying with a Back-End Application Server.Examples. Connecting with the Database,The Craftiest Hack of Them All,Using Native Database APIs.Examples.

Using ODBC,Using JDBC,Specialized Web Application Servers,Identifying Web Application Components from URLs,The Basics of Technology Identification,Examples,More Examples,Advanced Techniques for Technology Identification,Examples,Identifying Database Servers,Countermeasures, Rule 1: Minimize Information Leaked from the HTTP Header,Rule 2: Prevent Error Information from Being Sent to the Browser.

DIGITAL WATERMARKING & STAGENOGRAPHY

Course Code: NCE6909

Credit Units : 03

Course Contents:

Module-I: Introduction Applications and Properties

Information Hiding, Steganography, and Watermarking , History of Watermarking , History of Steganography , Importance of Digital Watermarking , Importance of Steganography , Applications of Watermarking , Applications of Steganography Steganography for Dissidents, Steganography for Criminals , Properties of Watermarking Systems , Evaluating Watermarking Systems , Properties of Steganographic and Steganalysis Systems , Evaluating and Testing Steganographic Systems

Module-II: Models of Watermarking

Notation , Communications , Communication-Based Models of Watermarking , Geometric Models of Watermarking , Modeling Watermark Detection by Correlation
Watermarking with side information: Informed Embedding, Watermarking Using Side Information, Dirty-Paper Codes

Module-III: Practical Dirty-Paper Codes

Practical Considerations for Dirty-Paper Codes , Broad Approaches to Dirty-Paper Code Design , Implementing DM with a Simple Lattice Code , Typical Tricks in Implementing Lattice Codes
Coding with Better Lattices , Making Lattice Codes Survive Valumetric Scaling Dirty-Paper Trellis Codes

Watermark Security : Security Requirements , Watermark Security and Cryptography Some Significant Known Attacks

Module-IV: Steganography

Steganographic Communication , The Channel , The Building Blocks , Notation and Terminology , Information-Theoretic Foundations of Steganography , Cachin's Definition of Steganographic Security , Practical Steganographic Methods , Statistics Preserving Steganography , Model-Based Steganography
Masking Embedding as Natural Processing , Minimizing the Embedding Impact , Matrix Embedding, Nonshared Selection Rule,

Module-V: Steganalysis

Steganalysis Scenarios , Detection , Forensic Steganalysis , The Influence of the Cover Work on Steganalysis , Some Significant Steganalysis Algorithms , LSB Embedding and the Histogram Attack , Sample Pairs Analysis , Blind Steganalysis of JPEG Images Using Calibration, Blind Steganalysis in the Spatial Domain.

Examination Scheme:

SUMMER INTERNSHIP EVALUATION-III

Course Code: NCE6935

Credit Units : 06

Guidelines:

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc.

In order to achieve these objectives, each student will maintain a file (**Internship File**). The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development.

The File will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

The **layout guidelines** for the Project & Seminar Report:

1. File should be in the following specification:

A4 size paper

Font: Arial (10 points) or Times New Roman (12 points)

Line spacing: 1.5

Top & bottom margins: 1 inch/ 2.5 cm

Left & right margins: 1.25 inches/ 3 cm

2. Report Layout: The report should contain the following components:

Front Page

Table of Content

Acknowledgement

Student Certificate

Company Profile (optional)

Introduction

Main Body

References / Bibliography

The File will include **five sections** in the order described below. The content and comprehensiveness of the main body and appendices of the report should include the following:

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

1. **The Title Page**--Title - An Internship Experience Report For (Your Name), name of internship organization, name of the Supervisor/Guide and his/her designation, date started and completed, and number of credits for which the report is submitted.
2. **Table of Content**--an outline of the contents by topics and subtopics with the page number and location of each section.
3. **Introduction**--short, but should include how and why you obtained the internship experience position and the relationship it has to your professional and career goals.
4. **Main Body**--should include but not be limited to daily tasks performed. Major projects contributed to, dates, hours on task, observations and feelings, meetings attended and their purposes, listing of tools and materials and their suppliers, and photographs if possible of projects, buildings and co-workers.
5. **References / Bibliography** --This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system

ASSESSMENT OF THE INTERNSHIP FILE

The student will be provided with the Student Assessment Record (SAR) to be placed in front of the Internship File. Each item in the SAR is ticked off when it is completed successfully. The faculty will also assess each item as it is completed. The SAR will be signed by the student and by the faculty to indicate that the File is the student's own work. It will also ensure regularity and meeting the deadlines.

STUDENT ASSESSMENT RECORD (SAR)

5. Range of Research Methods used to obtain information

6. Execution of Research

7. Data Analysis

- Analyse Quantitative/ Qualitative information
- Control Quality

8. Draw Conclusions

PROJECT-DISSERTATION-II

Course Code: NCE6037

Credit Units: 15

GUIDELINES FOR DISSERTATION

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critiqued by the faculty guide and corrected by the student at each stage.

The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

In general, the File should be comprehensive and include

A short account of the activities that were undertaken as part of the project;

A statement about the extent to which the project has achieved its stated goals.

A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;

Any activities planned but not yet completed as part of the DISSERTATION, or as a future initiative directly resulting from the project;

Any problems that have arisen that may be useful to document for future reference.

➤ Report Layout

The report should contain the following components:

➤ **Title or Cover Page**

The title page should contain the following information: Project Title; Student's Name; Course; Year; Supervisor's Name.

➤ **Acknowledgements** (optional)

Acknowledgment to any advisory or financial assistance received in the course of work may be given.

➤ **Abstract**

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project

➤ **Table of Contents**

Titles and subtitles are to correspond exactly with those in the text.

➤ **Introduction**

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

➤ **Materials and Methods**

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

This section should aim at experimental designs, materials used. Methodology should be mentioned in details including modifications if any.

➤ **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing these section, emphasis should be given on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary never write in “point” form.

➤ **Conclusion**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

➤ **Future prospects**

➤ **Appendices**

The Appendix contains material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

➤ **References / Bibliography**

This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

Examples

For research article

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infect*, **8** (suppl 1): 116–117.

For book

Kowalski, M. (1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63-67

ASSESSMENT OF THE DISSERTATION FILE

Essentially, marking will be based on the following criteria: the quality of the report, the technical merit of the project and the project execution.

Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project.

Project execution is concerned with assessing how much work has been put in.

The File should fulfill the following *assessment objectives*:

Range of Research Methods used to obtain information

Execution of Research

Examination Scheme:

Dissertation	50
Viva Voce	50
Total	100

ata, leading to production of a structured report.

Selecting the Dissertation Topic

It is usual to give you some discretion in the choice of topic for the dissertation and the approach to be adopted. You will need to ensure that your dissertation is related to your field of specialization.

Deciding this is often the most difficult part of the dissertation process, and perhaps, you have been thinking of a topic for some time.

It is important to distinguish here between ‘dissertation topic’ and ‘dissertation title’. The topic is the specific area that you wish to investigate. The title may not be decided until the dissertation has been written so as to reflect its content properly.

Few restrictions are placed on the choice of the topic. Normally we would expect it to be:

- relevant to business, defined broadly;
- related to one or more of the subjects or areas of study within the core program and specialisation stream;
- clearly focused so as to facilitate an in-depth approach, subject to the availability of adequate sources of information and to your own knowledge;
- of value and interest to you and your personal and professional development.

Planning the Dissertation

This will entail following:

- Selecting a topic for investigation.
- Establishing the precise focus of your study by deciding on the aims and objectives of the dissertation, or formulating questions to be investigated. Consider very carefully what is worth investigating and its feasibility.
- Drawing up initial dissertation outlines considering the aims and objectives of the dissertation. Workout various stages of dissertation
- Devising a timetable to ensure that all stages of dissertation are completed in time. The timetable should include writing of the dissertation and regular meetings with your dissertation guide.

The Dissertation plan or outline

It is recommended that you should have a dissertation plan to guide you right from the outset. Essentially, the dissertation plan is an outline of what you intend to do, chapter wise and therefore should reflect the aims and objectives of your dissertation.

There are several reasons for having a dissertation plan

- It provides a focus to your thoughts.
- It provides your faculty-guide with an opportunity, at an early stage of your work, to make constructive comments and help guide the direction of your research.
- The writing of a plan is the first formal stage of the writing process, and therefore helps build up your confidence.
- In many ways, the plan encourages you to come to terms with the reading, thinking and writing in a systematic and integrated way, with plenty of time left for changes.
- Finally, the dissertation plan generally provides a revision point in the development of your dissertation report in order to allow appropriate changes in the scope and even direction of your work as it progresses.

Keeping records

This includes the following:

- Making a note of everything you read; including those discarded.
- Ensuring that when recording sources, author's name and initials, date of publication, title, place of publication and publisher are included. (You may consider starting a card index or database from the outset). Making an accurate note of all quotations at the time you read them.
- Make clear what is a direct quotation and what is your paraphrase.

Dissertation format

All students must follow the following rules in submitting their dissertation.

- Front page should provide title, author, Name of degree/diploma and the date of submission.
- Second page should be the table of contents giving page references for each chapter and section.
- The next page should be the table of appendices, graphs and tables giving titles and page references.
- Next to follow should be a synopsis or abstract of the dissertation (approximately 500 words)
- Next is the 'acknowledgements'.
- Chapter I should be a general introduction, giving the background to the dissertation, the objectives of the dissertation, the rationale for the dissertation, the plan, methodological issues and problems. The limitations of the dissertation should also be hinted in this chapter.
- Other chapters will constitute the body of the dissertation. The number of chapters and their sequence will usually vary depending on, among others, on a critical review of the previous relevant work relating to your major findings, a discussion of their implications, and conclusions, possibly with a suggestion of the direction of future research on the area.
- After this concluding chapter, you should give a list of all the references you have used. These should be cross - references with your text. For articles from journals, the following details are required e.g.

Draper P and Pandyal K. 1991, The Investment Trust Discount Revisited, Journal of Business Finance and Accounting, Vol18, No6, Nov, pp 791-832.

For books, the following details are required:

Levi, M. 1996, International Financial Management, Prentice Hall, New York, 3rd Ed, 1996

- Finally, you should give any appendices. These should only include relevant statistical data or material that cannot be fitted into the above categories.

The Layout Guidelines for the Dissertation

- A4 size Paper
 - Font: Arial (10 points) or Times New Roman (12 points)
 - Line spacing: 1.5

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

Guidelines for the assessment of the Dissertation

While evaluating the dissertation, faculty guide will consider the following aspects:

1. Has the student made a clear statement of the objective or objective(s).
2. If there is more than one objective, do these constitute parts of a whole?
3. Has the student developed an appropriate analytical framework for addressing the problem at hand.
4. Is this based on up-to-date developments in the topic area?
5. Has the student collected information / data suitable to the frameworks?
6. Are the techniques employed by the student to analyse the data / information appropriate and relevant?
7. Has the student succeeded in drawing conclusion form the analysis?
8. Do the conclusions relate well to the objectives of the project?
9. Has the student been regular in his work?
10. Layout of the written report.

Assessment Scheme:

DIGITAL ELECTRONICS

Course Code: IFT2112

Credit Units: 03

Course Objective:

An entry level course in digital electronics covering number systems, binary mathematics, digital codes, logic gates, Boolean algebra, Karnaugh maps, and combinational logic. Emphasis will be on circuit logic analysis and design of digital circuits. The student will explain the operation of digital logic gates and use Boolean algebra and Karnaugh mapping to express logic operations and minimize logic circuits in design. The student will construct, analyze combinational logic circuits & sequential circuits; create a truth table for standard digital logic gates; and add, subtract, multiply and divide using the binary numbering system. Student will also be able to understand about digital to analog conversion and vice versa.

Course Contents:

Module I: Number System

Decimal, Binary, Octal, Hexadecimal Number Systems and Conversion of the bases, Complements: r's complement, (r-1)'s complement, Binary codes: Grey code, BCD Code, Excess-3 code

Introduction to logic systems

Positive and negative logic, Logic functions - NOT, AND, OR, NOR, EX-OR, EX NOR

Truth tables Boolean algebra, De Morgan's theorems Standard forms for Logical Expressions - Sum of Products, Product of Sums Specification of Logical functions in terms of Minterms and Maxterms, Karnaugh Maps, Simplification of Logical functions, Introduction of "don't care" states.

Module II: Combinational Building Blocks

Multiplexers, De-multiplexers, Decoders, Encoders

Arithmetic circuits

Half Adders and Full Adders, Half Subtractor and Full Subtractor

Module III: Flip-flops

The RS latch, the clocked RS flip-flop, JK Flip Flop, the Master-Slave JK flip-flop, Delay and Toggle flip-flops

Flip-flops in counter circuits Asynchronous (ripple) Counters (UP/DOWN), Synchronous Counter design (UP/DOWN), Non Sequential Counting

Module IV: Shift Registers

Shift registers in general, Ring Counters, Johnson Counter

Introduction to Memory

Primary: RAM, Static RAM, Dynamic RAM, ROM, PROM, EAPROM, Secondary: Floppy Disk, Hard Disk, CDROM

Module V: Introduction to Logic Families, DACs and ADCs

Introduction to logic families-TTL, RTL, ECL, CMOS, DTL, IIL

Binary weighted resistor DAC, Resolution, linearity and settling time of DACs, Successive approximation ADC

Examination Scheme:

IFT2114	COMPUTER FUNDAMENTALS AND TOOLS	L	T	P	C
Version 2017.1	Date of Approval: 14 June, 2017	3	0	0	3
Pre-requisites/Exposure	Basis of Computers				
Co-requisites	Nil				

Catalog Description

Examines key computational abstraction levels below modern high-level languages; number representation, assembly language, memory management, the operating-system process model, high-level machine architecture including the memory hierarchy, and how high-level languages are implemented. This course is aimed to provide a fundamental understanding of computer science for the students in their early stages of academic career. Various computer nomenclatures regarding to hardware and software are introduced in this course to develop an in-depth realization of several subjects and their significant roles in the field.

Course Objectives

The objective of this course is to

1. Give students an in-depth understanding of why computers are essential components in business, education and society.
2. Introduce the fundamentals of computing devices and reinforce computer vocabulary, particularly with respect to personal use of computer hardware and software, the Internet, networking and mobile computing.
3. Provide hands-on use of Microsoft Office 2013 applications Word, Excel, Access and PowerPoint.

Course Outcomes

On completion of this course, the students will be able to

CO1: Describe the usage of computers and why computers are essential components in business and society.

CO2: Utilize the Internet Web resources and evaluate on-line e-business system.

CO3: Solve common business problems using appropriate Information Technology applications and systems.

CO4: Identify categories of programs, system software and applications. Organize and work with files and folders.

CO5: Describe various types of networks standards and communication software.

Modules	Blooms level*	Number of hours
MODULE 1: Computer and its characteristics, application of computers, digital and analog computer, Generation of computers, Storage devices: primary storage devices (RAM,ROM,PROM,EPROM,EEPROM) , secondary storage devices(Floppy disk, Hard disk, optical disk, magnetic tapes), Input and output devices (keyboard, mouse, light pen, joystick, scanner, monitor, printers etc.)	L1, L2, L3	7
MODULE 2: Software and its types (System Software, Application Software, Firmware Software's) Computer Languages and its types (Machine Language,	L1, L2	8

Assembly Language, High Level Language: advantages and disadvantages of computer languages), Translators: Compiler, Linker, Interpreter, Number system and its types, conversion from one base to another and vice versa.		
MODULE 3: Word Processor and its features, Editing of Text, Find and Replace, Bullets and Numbering, Spell Checker, Grammar Checker, Auto Correct, Auto Complete, Auto Text, Header and footer, tables, mail merge, border and shading, page setup, printing.	L2, L3 and L4	7
MODULE 4: Spread sheet and its features, Entering Information in Worksheet, Editing Cell Entry, Moving and Copying Data, deleting or Inserting Cells, Rows and Columns, Custom Numeric Formats, Using Formulas and functions, Creating charts.	L2, L3, L4	7
MODULE 5: Presentation Software and its uses, steps for creating PowerPoint Presentation, PowerPoint Views, Assigning Slide Transitions, Using Preset Animations, Hiding Slides, Slide Show, Controlling the Slide Show with a Keyboard, Setting Slide Show Timings.	L3, L5 and L6	7

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation

IFT2116	COMPUTER PROGRAMMING WITH C LANGUAGE	L	T	P	C
Version : 2017.1	Date of Approval: 14 th June, 2017	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course is aimed to provide a fundamental understanding of programming concepts. C Language is the language which used to write solution for the basic computational problem in the form of instructions and programs. The basic and advanced features of C Language including Data types, Operators, Conditional & Control Statements, Arrays, Strings, Structure & Union and File Handling will be introduced.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of Programming through C Language
2. Provide an overview of advanced programming concepts like Structure, Union and File Handling

Course Outcomes

On completion of this course, the students will be able to

After the completion of course, the students will be able to,

- CO 1: Define the purpose and structure of C Program for programming; identify and distinguish various datatypes and operators for arithmetic, logical relational operations; solve the problems related to finding errors and output in program.
- CO 2: Describe conditional and control statement; apply if-else, Switch and loops to rewrite basic C program for problem solving.
- CO 3: Compare and contrast various Array types, its declaration and implementation; differentiate between Call by Value and Reference if Functions; apply the concepts to rewrite C Programs
- CO 4: Differentiate between various String Handling Functions; describe the concept of Pointers in C Language
- CO 5: Explain the concept of Structure and Union; apply the concept of File Handling to provide data storage support to the programs.

Modules	Blooms level*	Number of hours
Module I: Introduction to 'C' Language History of C, Introduction of C, Basic structure of C program, Concept of variables, constants and data types in C, Operators and expressions: Introduction, arithmetic, relational, Logical, Assignment, Increment and decrement operator, Conditional, bitwise operators, Expressions, Operator precedence and associatively. Managing Input and output Operation, formatting I/O.	L1, L2 and L3	6
Module II: Decision making and looping Decision making in program, Relational Logical operators example, if statements, if -else, nested if-else statements, Switch, case loop, Do-While, While, for loop and nesting of loop, continue and break , Storage types ,	L2 and L3	8

predefined processor.		
Module III: Arrays and Functions One Dimensional Arrays, Arrays Manipulation, Sorting, Searching, Function declaration, example & calling a function. Passing Arguments, call by value and call by references, Recursive function, .Recursion.	L2, L3 and L4	7
Module IV: Pointers and String Pointers: Declaration, Pointer assignments, initialization, Pointers and Dynamic Memory Allocation, Array of Pointers, strings, string handler functions.	L2, L3 and L4	8
Module V: Structure Union & file handling Structure definition, Declaration, structure Assignments, Arrays in structure, Structure Arrays, Pointer Structure, Nested Structure, Arrays of Structure, Union declaration, assignments & example programs, Difference between structure & union, file handling and the related functions.	L2 and L3	7

**Bloom's Level:*

IFT2115	COMPUTER FUNDAMENTALS & TOOLS LAB	L	T	P	C
Version 2017.1	Date of Approval: 14 June,2017	0	0	2	1
Pre-requisites/Exposure	Knowledge of Computer				
Co-requisites	NIL				

Catalog Description

This course is aimed to provide a fundamental understanding of computer science for the students in their early stages of academic career. Various computer nomenclatures regarding hardware and software will be introduced for students to develop an in-depth realization of several subjects and their significant roles in the field. After this course, the students will be able to understand and apply the fundamental concepts of computer.

Course Objectives

The objective of this course is

1. Give students an in-depth understanding of why computers are essential components in business, education and society.
2. Introduce the fundamentals of computing devices and reinforce computer vocabulary, particularly with respect to personal use of computer hardware and software, the Internet, networking and mobile computing.
3. Provide hands-on use of Microsoft Office 2016 applications Word, Excel, Access and PowerPoint. Completion of the assignments will result in MS Office applications knowledge and skills.

Course Outcomes

On completion of this course, the students will be able to:

CO 1: Outline the usage of computers and why computers are essential components in business and society. Creating the folder and apply it where necessary.

CO 2: Identify the features of windows operating system. Determine the operations of taskbar of Windows and Set the wall paper, screen saver and date/time.

CO 3: State and demonstrate the use of word document and relate its applications with the day to day use of files.

CO 4: Identify and relate the concept of macros and mail merging. Design and work with files and folders.

CO 5: List the features of the excel document and apply and relate its calculation part with the real world. Design a document for resume writing.

Modules/Topics Covered**	Blooms level*	Number of hours
1. Create a new folder and do the following: <ol style="list-style-type: none"> a. Make a word document in it. b. Make an Excel document in it. c. Make a new folder in it d. Rename the initial folder e. Move the initial folder f. Copy the initial folder. g. Delete the initial folder 	L1, L3 and L5	4
2. Implement the various well known features of Windows operating system such as Notepad, WordPad, Paint, System tools, Entertainment etc. enclosed in Start→Programs→Accessories.	L1, L3	4

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

3. Implement various display properties by right clicking on the Windows Desktop. 4. Explore the taskbar of Windows. 5. Set the wall paper and screen saver. 6. Set the date/time.		
7. Create a document and a. Put Bullets and Numbers b. Apply various Font parameters. c. Apply Left, Right, and Centre alignments. d. Apply hyperlinks. e. Insert pictures f. Insert ClipArt g. Show the use of WordArt h. Add Borders and Shading i. Show the use of Find and Replace. j. Apply header/footers	L1, L3, L5	4
8. Create any document and show the use of File→versions. 9. Create any document and show the difference between paste and paste special. 10. Create a document to show the use of Washout/Watermark. 11. Implement the concept of mail merge.	L1, L3, L5	4
12. Implement the concept of macros. 13. Implement the concept of importing a file/document. 14. Implement the concept of merging the documents.	L1, L3, L5	4
15. Create a student table and do the following: a. Insert new row and fill data b. Delete any existing row c. Resize rows and columns d. Apply border and shading e. Apply merging/splitting of cells f. Apply sort g. Apply various arithmetic and logical formulas. 16. Create your resume using General Templates.	L1, L3, L4, L5	4

**Bloom's Level:*

IFT2118	COMPUTER PROGRAMMING WITH C LANGUAGE LAB	L	T	P	C
Version 2017.1	Date of Approval: 14 June, 2017	0	0	2	1
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The primary objective of this course is to understand all the components of C, including the C language, the C Preprocessor, and the C Standard Library. An understanding of some advanced practical issues, including memory management, testing and debugging, complex declarations and expression evaluation, building and using libraries, and evaluating tradeoffs, such as size vs. speed and speed vs. complexity. The ability to write C code and create and manipulate logical programs.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of Programming through C Language
2. Provide an overview of advanced programming concepts like Structure, Union and File Handling

Course Outcomes

After the completion of course, the students will be able to,

CO 1: Demonstrate the use of various data types and operators in C programs; Solve various problems using conditional control statements (if-else, Switch case).

CO 2: Construct C programs related to problems involving the usage of loops, arrays and functions.

CO 3: Apply the concept of Pointers for efficient memory management and construct C programs using string handling functions.

CO 4: Demonstrate the use of Structure, Union and concept of File Handling to provide data storage support to the programs.

Modules	Blooms level*	Number of hours
LABORATORY SESSSION 1 OPERATORS, EXPRESSIONS and DECISION MAKING <ol style="list-style-type: none"> 1. Write a program to calculate simple interest and amount. 2. Write a program to swap two numbers using third variable. 3. Write a program to demonstrate Greatest of 3 nos and to print the given no in ascending order. 4. Write a program to check if the number is even or odd. 5. Write a program to perform arithmetic operations using Switch Case statement. 6. Write a program to calculate area of circle, rectangle, square and triangle using Switch Case statement. 	L3	5
LABORATORY SESSSION 2 LOOPING <ol style="list-style-type: none"> 1. Write a program to find factorial of given no using do while statement. 2. Write a program to print prime numbers up to 'n'. 	L3	6

3. Write a program to sum of n natural no. 4. Write a program to print Fibonacci series. 5. Write a program to reverse a number. 6. Write a program to print the following pattern using for loop 1 2 2 3 3 3 4 4 4 4 7. Write a program to print the following pattern using for loop A A B A B C A B C D		
LABORATORY SESSSION 3 ARRAYS and FUNCTIONS 1. Write a program to read nnum of students and 5 subjects marks. 2. Write a program to swap two numbers using call by value. 3. Write a program to convert all lower case to uppercase characters 4. Write a program to find the factorial of a number using recursion. 5. Write a program to print the add/product of two matrices of any order.	L3	5
LABORATORY SESSSION 4 POINTERS AND STRING 1. Write a program to perform operations on strings using string handling in-built functions (concatenation, reversal, copy etc.) 2. Write a program to swap two numbers using call by reference. 3. Write a program to perform dynamic memory allocation and deallocation. 4. Write a program to print elements of array using pointers.	L3	4
LABORATORY SESSSION 5 STRUCTURE,UNION & FILE HANDLING 1. WAP program to display student information by initializing structures. 2. WAP program to find the total salary of employee and employee details using structure. 3. Write a program to store and display information using Union. 4. Program to write data into file and read data from file.	L3	4

IFT2202	INTRODUCTION TO DATABASE MANAGEMENT SYSTEMS	L	T	P	C
Version 2017.1	Date of Approval: 14 June, 2017	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course is to expose the students to the fundamentals & basic concepts in Data Base Management Systems. This course discusses architecture of Database Systems with concept of relational model & ER model. This course explains techniques for database design, Normalization and database recovery and protection.

Course Objectives

This objectives of the course is to expose the students to

1. The fundamentals & basic concepts in Data Base Management Systems.
2. Architecture of Database Systems with concept of relational model & ER model.
3. The techniques for database design, Normalization and database recovery and protection.

Course Outcomes

After completing the course, the student will be able to:

- CO1: Define and list the basic terminologies used in database
CO2: Explain and describe the relational model and relational algebra
CO3: Apply and construct the concepts used in modelling
CO4: Compare and illustrate different concurrency control protocols
CO5: Design the ER Model and SQL queries
CO6: Assess and interpret different issues associated with database systems

Modules	Blooms level*	Number of hours
MODULE 1: Introduction to DBMS Definition of DBMS, Data Independence, DBMS Architecture, Levels, Database Administrator, File System Approach Vs DBMS Approach, Advantages of Using a DBMS, Data Models, Schemas, and Instances.	L1, L2	8
MODULE 2: Relational Database & ER Model Relational System, Codd's Rule, Relational Model, Optimization, Tables and Views, Entity, Types of Entity, Weak Entity Attributes, Entity sets, Entity – Relationship Diagrams.	L1, L2, L3	7

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

MODULE 3: Relational Model Objects Domains and Relations, Relations and predicates, Relational Data Integrity; Primary Key, Candidate Key, Foreign Key and their rules; Relational operators, Relational Algebra, Relational Calculus, SQL Language, Data definition, Data retrieval and update operations.	L1, L2, L3	8
MODULE 4: Database Design Definition Of Functional Dependencies, Process Of Normalization, First Normal Form, Second Normal Form, Third Normal Form. BoyceCodd Normal Form, Fourth Normal Form, Fifth Normal Form.	L3, L4	5
MODULE 5: Data Recovery & Protection Transaction ACID Properties ,Recovery- Transaction recovery, System recovery, Media Recovery, Concurrency Control Techniques Lost Update Problem , Dirty Read Problem, Locking, Dead Lock, Serializability; Security- Introduction.	L3, L4, L5, L6	8

**Bloom's Level:*

IFT2211	DATA STRUCTURE THROUGH C LANGUAGE	L	T	P	C
Version 2017.1	Date of Approval:14 June, 2017	3	0	0	3
Pre-requisites/Exposure	Hands on knowledge of C Programming				
Co-requisites	Basic concepts of C Programming				

Catalog Description

This course is an introduction to the use, design, and analysis of data structures in computer programs. The very commonly used data structures like arrays, stacks, queues, lists, trees, and graphs will be discussed in detail. Sorting and hashing are important topics in the study of algorithms. They are also closely related to the design of data structures. Several algorithms to implement these techniques are included in the syllabus.

Course Objectives

The objective of this course is to

1. Equip the students with the basic concepts of data structures and algorithms
2. Understand concepts about searching and sorting techniques
3. Understand basic concepts about stacks, queues, lists, trees and graphs

Course Outcomes

On completion of this course, the students will be able to

- CO 1: Explain fundamental data structures and algorithms and summarize their typical uses, strengths, and weaknesses; Address calculation, application of 1D and 2D arrays and various operations applied on arrays.
- CO 2: Explain Stack and Queue data structure, various types of Queues; Representation of stack and queue in memory; Applications of stack and queue.
- CO 3: Explain and compare link list with other linear data structure; Advantage, disadvantages, types, application and memory representation of link list.
- CO 4: Explain Binary search tree and its types. Applying in-order, pre-order and post order traversal to create the tree; application of tree in searching and storing huge amount of data.
- CO 5: Analyze and compare the complexity different searching and sorting algorithms. Evaluate algorithms and data structures in terms of time and memory complexity of basic operations.
- CO 6: Explain different types of graphs and their representation in memory. Applying BFS and DFS graph traversal scheme to find shortest path. Determine minimum spanning tree using Kruskal and Prim's method.

Modules	Blooms level*	Number of hours
MODULE 1: BASIC CONCEPTS AND ARRAY Definition Accessing the address of a variable, Declaring and initializing pointers. Accessing a variable through its pointer. Meaning of static and dynamic memory allocation. Memory allocation functions :malloc, calloc, free and realloc. Representation of arrays single and multi dimensional arrays. Address calculation using column and rows major ordering. Various operations on arrays, Application of arrays: matrix multi multiplication.	L1, L2 and L3	5
MODULE 2:	L2, L3	7

STACKS AND QUEUES Definition, Array representation of stack. Operations on stack: Infix, prefix and postfix notations. Conversion of an arithmetic expression from Infix to postfix. Evaluation of postfix expression using stacks. Definition, Array representation of Queue. Types of queue: Simple queue, circular queue, double ended queue (deque), priority queue, operations on all types of Queues.	and L4	
MODULE 3: LINKED LIST Definition, Components of linked list, Representation of linked list, Advantages and Disadvantages of linked list. Types of linked list : Singly linked list, Doubly linked list, Circular linked list and circular doubly linked list. Operations on singly linked list : creation, insertion, deletion, search and display (based on the different position as specified by the user). Linked representation of Stacks & Queues.	L2, L3 and L4	7
MODULE 4: TREES Definition : Tree, Binary tree, Complete binary tree, Binary search tree, Heap Tree terminology : Root, Node, Degree of a node and tree, Terminal nodes, Non terminal nodes, Siblings, Level, Edge, Path, depth, Parent node, ancestors of a node. Binary tree : Array representation of tree, Creation of binary tree. Traversal of Binary Tree: Preorder, Inorder and post order. Representation of trees and its application, Binary search tree: Insertion & deletion in BST. Height balanced (AVL) tree	L2, L3, L4 and L5	6
MODULE 5: SEARCHING, SORTING AND COMPLEXITY Searching: Sequential and binary search, Comparison between linear and binary search. Sorting: insertion, selection, bubble, quick, merge, heap sort.	L2, L3 and L4	5
MODULE 6: GRAPHS Graph representation: adjacency list, adjacency matrix. Types of Graphs: Directed & Undirected Graph . Traversal scheme: Depth first search, Breadth first search. Spanning tree: definition, minimal spanning tree algorithms.	L2, L3 and L4	6

IFT2217	WEB TECHNOLOGIES	L	T	P	C
Version 2017.1	Date of Approval: 14 June, 2017	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course is aimed to provide a fundamental understanding of web site creation. Hypertext Markup Language (HTML) is the language used for designing most basic web pages (static). The basic and advanced features of HTML including lists, images, hyperlinks, tables, frames and forms will be introduced. It will also provide an overview of Cascading Style Sheets (CSS) and Extensible Markup Language (XML) which can be used with HTML for better data organization and presentation of content on website.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of website design through Hypertext Markup Language and basics of Javascript.
2. Provide an overview of Cascading Style Sheets and Extensible Markup Language for better management of website content.

Course Outcomes

After the completion of course, the students will be able to,

- CO 1: Define the purpose and structure of HTML for website development; identify and distinguish various HTML tags for background settings, text-formatting, HTML lists, image insertion and hyperlinks; prepare web page/website content using basic HTML tags and attributes.
- CO 2: Describe HTML table, its structure and attributes; Apply table, frameset and frame elements to web-site design.
- CO 3: Compare and contrast various form controls; design various kinds of form for user related information and apply front-level validations using Javascript.
- CO 4: Differentiate between Inline, Internal and external CSS; modify the website content presentation by incorporating Cascading style sheet properties to existing HTML files.
- CO 5: Demonstrate the use of XML document Type Declaration; differentiate between well-formed or Valid XML document.

Modules	Blooms level*	Number of hours
MODULE 1: INTRODUCTION TO HTML History of HTML, Structure of HTML, HTML Basic: Elements, Tags and Attributes. Adding Comments, Adding Title, HTML Background: using plain color, using image, Formatting Text : Paragraph, inserting line break, Heading Style, Bold text, Italicized text, Underlined text, Teletype text, Strikeout, Superscript, Subscript, Important text, Emphasized text, Inserted text, Deleted text, Larger text, Smaller text. Working with Text: Changing font Sizes and Colors. Creating List: Ordered List, Unordered List, Definition List, Nested List. Inserting image, Creating Hyper Text Links, Creating Image Links, Horizontal Rules, Marquee Tag. Address Tag.	L1, L2 and L3	10
MODULE 2:	L2 and	8

TABLES AND FRAMES Tables: Creating Tables, Table Element, Adding Border, Adding Column Headings, Cellspacing and Cellpadding, Adding a Caption, Setting the table Width and Height, Add Row Headings, Aligning Cell contents, Setting Column Width, Centering a Table, Inserting Image, Rowspan, Colspan, Assigning Background Colors. Frames: Frameset Element, Frame Element, Noframes Element, Specifying Target, Inline Frames.	L3	
MODULE 3: FORMS AND VALIDATION Forms: Introduction to Forms, Form Elements, Text Field, Password Field, Label, Check Box, Radio Button, Selection List, Text Area, Button. Front level validations using JavaScript: Checking a Non-empty Text/Password Field, Restricting Length of Text/Password Field.	L4 and L5	8
MODULE 4: CASCADING STYLE SHEETS Overview of style sheets, Advantages, Different ways to use style sheet: External style sheet, Internal style sheet, Inline style sheet. Selectors: Element selector, Id selector, Class selector, Grouping selector. Adding style to a Document, Adding Comments in CSS.	L4 and L5	5
MODULE 5: XML Introduction to XML, XML Basics, XML Structure, XML Tags, XML Elements, XML Attributes, Adding Comments, XML Document Type Declaration: Internal DTD and External DTD. Well formed XML Documents and Valid XML Document	L3 and L4	5

IFT2219	COMPUTER ORGANIZATION AND ARCHITECTURE	L	T	P	C
Version 2017.1	Date of Approval: 14 June, 2017	3	0	0	3
Pre-requisites/Exposure	Basic Knowledge of Digital Electronics				
Co-requisites	Nil				

Catalog Description

The course provides a detailed description about Computer System and all its Components. The process of execution of an Instruction from the time it arrives till it is finished is explained. The organization of various Computer System Components such as Registers, Stack is mentioned. Further, the interaction of CPU with Memory and Input Output devices is also explained in detail. The course also provides an introduction to traditional Microprocessor Concept and Assembly Language Program.

Course Objectives

The objective of this course is:

1. To provide an overview of computer's architecture.
2. To understand how a computer is organized and what are its different components.

Course Outcomes

On completion of this course, the students will be able to

- CO 1: Explain the basic Computer System Architecture describing all the components; Memory, Input Output, CPU Registers, ALU and Control unit
- CO 2: Explain the Instruction Cycle and Distinguish among Memory Reference, Register Reference and Input Output Reference Instructions.
- CO 3: Explain the organization of CPU and method of executing instructions in parallel to increase CPU throughput.
- CO 4: Explain the interaction of CPU with Input Output Devices and Organization of Memory Section
- CO 5: Apply the concept of Microprocessor and rewrite various Assembly Language Scripts.

Modules	Blooms level*	Number of hours
MODULE 1: General Computer Architecture Block Diagram of typical Computer, Memory Section, Input/Output Section, CPU, Registers, Arithmetic Unit, Instruction handling Areas, Stacks Register Transfer Language and Micro operations: Register Transfer, Bus and Memory Transfer, Arithmetic Micro operations(Binary Adder, Binary Adder-subtractor, Binary increment, Arithmetic Circuit), Logic Micro operations, Shift Micro operations, Arithmetic Logic Shift Unit	L1, L2	5
MODULE 2: Basic Computer Organization and Design Instruction Codes, Stored program organization computer registers, common bus system, Timing and Control, Instruction Cycle, Memory Reference Instructions, Input Output Instructions and Interrupts	L1, L2	4
MODULE 3: Central Processing Unit	L2, L3 and L4	6

DISCRETE MATHEMATICAL STRUCTURE WITH APPLICATION TO CS

Course Code: IFT2222

Credit Units: 03

Course Objective:

The Objective of this course is to provide the fundamentals and the concepts of Discrete Mathematical Structures with Applications to Computer Sciences including Mathematical Logic, Boolean Algebra and its Applications, Switching circuit & Logic Gates, Graphs and Trees. Important theorems with constructive proofs, real life problems & graph theoretic algorithms to be covered with an aim of helping the students to understand the computational and algorithmic aspects of Mathematical Logic, Boolean Algebra, Graphs and Trees in the field of Computer sciences and its applications.

Course Contents:

Module I: Introduction

Permutation and Combination : Counting Techniques.

Relation: Type and compositions of relations, Pictorial representation of relations, closures of relations, Composite Relations, Equivalence relations.

Function: Types, Composition of function, Mathematical Induction, Discrete Numeric Function and Generating Functions

Module II: Mathematical Logic

Proposition, Propositional Calculus- Propositional Variables and Compound Propositions, Basic Logical Operations: -Conjunction, Disjunction, Negation, Conditional, Bi conditional. Compound Statements, Equivalence, Duality, Algebra of Statements, Valid and Invalid, Arguments, Tautologies, Contradiction, Contingency , Boolean Functions – Disjunctive Normal Form, Conjunctive Normal Form.

Duality Principle.

Module III: Graphs

Basic Terminology of Graphs , Handshaking Lemma , Sub graphs, and Union of Graphs , Connected graph, Disconnected graph, Null graph, Incidence matrix, Adjacency matrix, Degree of a graph, Directed Graph, Walk, Path, Circuit, Wheel, Eulerian graph, Hamiltonian graph, Planar graph , Kuratowski's graphs-I and II , Coloring , Bipartite Graph , Cyclic Graph.

Module IV: Trees

Tree, Properties of Tree, Spanning Tree, Fundamental Circuit, Cut-Set, Cut-Vertices. Binary Tree , Rooted Trees, Path length, Minimum Spanning Trees, Huffman Encoding.

Examination Scheme:

Components	CT1	A/C/Q	Attd	EE
Weightage (%)	15	10	5	70

IFT2216	DATA STRUCTURE THROUGH C LANGUAGE LAB		L	T	P	C
Version 2017.1	Date of Approval: 14 June, 2017		0	0	2	1
Pre-requisites/Exposure	Hands on knowledge of C Programming					
Co-requisites	Basic concepts of C Programming					

Catalog Description

The course is designed to develop skills to design and analyse simple linear and non- linear data structures like arrays, stacks, queues, lists, trees, and graphs. It strengthen the ability of the students to identify and apply the suitable data structure for the given real world problem. It enables them to gain knowledge in practical applications of data structures.

Course Objectives

The objective of this course is to

1. Equip the students to apply knowledge of basic concepts of data structures in solving complex problems.
2. Provide demonstration of the data structure concepts like stacks, queues, lists, trees, graphs and various searching and sorting techniques

Course Outcomes

On completion of this course, the students will be able to

- CO 1: Apply the knowledge of basic fundamentals of data structures in order to analyze the time and space efficiency of the data structure
- CO 2: Demonstrate the use and applications of Stack and Queue data structure along with various types of Queues.
- CO 3: Demonstrate and compare link list with other linear data structure; Advantage, disadvantages, types and application of link list.
- CO 4: Apply the knowledge of trees and heaps and demonstrate the application of tree in searching and storing huge amount of data.
- CO 5: Apply algorithm for solving problems like sorting, searching, insertion and deletion of data.
- CO 6: Demonstrate the usage of graphs and their applications of BFS and DFS to find shortest path.

Modules	Blooms level*	Number of hours
1. Sample programs of 1D and 2-D arrays (a) Write a program to insert an element at any position in an array (b) Write a program to perform addition of matrix for order 3*3 (c) Write a program to perform multiplication of matrix of any order	L1, L2 and L3	4
2. Sample Programs of stack and queues. (a) Write a program that perform the following function i) Create stack of integers. ii) PUSH operation on stack iii) POP operation on stack (b) Write a program that perform the following function i) Create Queue of integers. ii) Insert operation on Queue	L2, L3	4

Prof. (Dr.) Anil Kumar

Manesar Gurgaon-122413

iii) Delete operation on Queue I Write a program that perform the following function i) Create Circular Queue of integers. ii) Insert operation on Circular Queue iii) Delete operation on Circular Queue		
3. Sample Programs of Linked List (a) Write a C program that perform the following: ii) Create a singly linked list of integers. ii) Delete a given integer from the above linked list. iii) Display the contents of the above list after deletion (b) Write a C program that performs the following: a) Create a doubly linked list of integers. b) Delete a given integer from the above doubly linked list. c) Display the contents of the above list after deletion	L2, L3 and L4	6
4. Sample Programs of trees (a) Write a C program that uses functions to perform the following: ii) Create a binary search tree of characters. ii) Traverse the above Binary search tree recursively in Postorder.	L2, L3, L4 and L5	2
5. Sample programs on sorting and searching (a) Write C programs for implementing the Bubble Sort (b) Write C programs for implementing the Selection Sort (c) Write C programs for implementing the Insertion Sort (d) Write a program to perform linear Search (e) Write a program to perform binary Search	L2, L3 and L4	6
6. Sample programs on graphs (a) Write C programs for implementing the graph traversal algorithms: Depth first traversal (b) Write C programs for implementing the graph traversal algorithms: Breadth first traversal	L3, L4 and L6	6

IFT2220	WEB TECHNOLOGIES LAB	L	T	P	C
Version 2017.1	Date of Approval: 14 June, 2017	-	-	2	1
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course is aimed to provide a fundamental understanding of web site creation. Hypertext Markup Language (HTML) is the language used for designing most basic web pages (static). The basic and advanced features of HTML including lists, images, hyperlinks, tables, frames and forms will be introduced. It will also provide an overview of Cascading Style Sheets (CSS) and Extensible Markup Language (XML) which can be used with HTML for better data organization and presentation of content on website.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of website design through Hypertext Markup Language and basics of Javascript.
2. Provide an overview of Cascading Style Sheets and Extensible Markup Language for better management of website content.

Course Outcomes

After the completion of course, the students will be able to,

CO 1: Prepare web page/website content various HTML elements including tags and attributes for background settings, text-formatting, HTML lists, image insertion and hyperlinks, Moving content across screen.

CO 2: Apply table, frameset and frame elements to web-site design.

CO 3: Construct various kinds of forms to take user related information and apply front-level validations using Javascript.

CO 4: Design and modify the website content presentation by incorporating inline, internal and external Cascading style sheets to existing HTML files.

CO 5: Demonstrate the use of well-formed or Valid XML document.

Modules	Blooms level*	Number of hours
LABORATORY SESSION 1 INTRODUCTION TO HTML 1. Design a webpage to show various tags used for formatting text. 2. Design a webpage to show usage of various heading tags, font tag and background color. 3. Design a webpage to insert image as an inline element and in the background. 4. Design a webpage to show usage of ordered list, unordered list and definition list. 5. Design a webpage to show the use of hyperlink (Text & Image) and image map. 6. Design a webpage to show scrolling text and scrolling image using marquee tag.	L3	6
LABORATORY SESSION 2 TABLES AND FRAMES	L3	4

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

1. Design a table using rowspan, colspan, cell padding, cell spacing, grouping, caption and border. 2. Divide a webpage into various frames (row or col wise) and populate them with web content.		
LABORATORY SESSION 3 FORMS AND VALIDATION 1. Create a log-in form/sign-up/feedback/registration form using various elements of form. 2. Write Javascript code to perform basic arithmetic operations, calculate factorial and other such functions using loops, if-else, switch etc. 3. Write javascript code to perform front-end validations (basic and data format validations) on HTML forms. 4. Prepare HTML code to perform form validations using HTML 5.0 elements.	L3	8
LABORATORY SESSION 4 CASCADING STYLE SHEETS 1. Apply Inline Cascading style sheet properties to enhance the appearance and outlook of webpage. 2. Modify the placement and styling of web page content (pictures, hyperlinks, images, videos, lists etc.) using Internal and/or External CSS file.	L3 and L5	4
LABORATORY SESSION 5 XML 1. Create an XML document for saving student details (Name, Enrollment number, Course, CGPA, and Contact No.)	L3	2

IFT2223	INTRODUCTION TO DATABASE MANAGEMENT SYSTEM LAB	L	T	P	C
Version 2017.1	Date of Approval: 14 June 2017	0	0	2	1
Pre-requisites/Exposure	Basic Concepts of DBMS				
Co-requisites	Relational Algebra and Relational Calculus				

Catalog Description

This course is design to get students familiar with the basic concepts of SQL including DDL, DML and DCL statements. The course also explains the basic concepts of PL/SQL. Students will learn practical on Oracle software and hence can work on any RDBMS software.

Course Objectives

The objective of this course is

1. To make students familiar with the concepts and working of SQL.
2. Provide an overview of PL/SQL.

Course Outcomes

On completion of this course, the students will be able to

CO1. Illustrate SQL basic concepts like languages DDL, DML etc., data types and working.

CO2. Explain concepts of database creation, manipulation of data and data retrieval and apply them in real database applications.

CO3. Design and implement various data constraints on a database for a given problem.

CO4. Solve queries using concepts like joins, subqueries, aggregate functions, triggers etc.

CO5. Prepare PL/SQL blocks.

Modules	Blooms level*	Number of hours
Lab Session 1 Introduction of RDBMS, Oracle, SQL and data types.	L1 and L2	2
Lab Session 2 Basic concept of database creation and manipulation of data.	L1and L3	2
Lab Session 3 Working with SELECT query.	L1 and L3	2
Lab Session 4 To apply data constraints on a table-Primary Key, Not Null, Unique.	L1 and L3	2
Lab Session 5 Working with Foreign Key and Check Constraint.	L1 and L3	2
Lab Session 6 To implement the basic concept of Aggregate and Grouping Functions.	L1 and L3	2
Lab Session 7 To apply various set operators on data.	L1 and L3	2
Lab Session 8 Concept of Nested queries in database and its application in database.	L1 and L3	2
Lab Session 9	L1 and	2

IFT2312	INTRODUCTION TO OBJECT ORIENTED PROGRAMMING WITH C++	L	T	P	C
Version 2017.1	Date of Approval: 14 June,2017	3	0	0	3
Pre-requisites/Exposure	Hands on knowledge of C Programming				
Co-requisites	Basic concepts of C Programming				

Catalog Description

This course is aimed at developing Programming skills using Object Oriented Technology in C++. This purpose of this subject is to improve the programming approach and development of software using OOPS technology. The Subject involves various concepts of Object Oriented Programming such as Classes, Objects, Polymorphism, Inheritance, Exception Handling etc. needed for a better approach towards software development.

Course Objectives

The objective of this course is

1. Perform object oriented programming to develop solutions to problems demonstrating usage of control structures, modularity, I/O. and other standard language constructs.
2. Demonstrate the application of object oriented programming in developing solutions to problems demonstrating usage of data abstraction, encapsulation, and inheritance.
3. Demonstrate ability to implement one or more patterns involving realization of an abstract interface and utilization of polymorphism in the solution of problems which can take advantage of dynamic dispatching, syntax and features .

Course Outcomes

On completion of this course, the students will be able to

CO 1: Explain the basic principles of object oriented programming approach; Differentiate it with procedural programming approach and also discuss difference between C and C++.

CO 2: Illustrate the different ways to define a member function inline and explain how the private members of a class can be accessed .Explain how the objects can be instantiated and destroyed with static data member.

CO 3: Explain the concept of inheritance, types and implementation with suitable examples; find out ambiguity problem in inheritance ; use the concept of overriding and constructors in inheritance.

CO 4: Explain polymorphism in detail and implement the concept of overloading in functions as well as in operators. Write the programs for virtual function and pointer with objects.

CO 5: Demonstrate the exception handling mechanism. Compare and contrast various formatted and unformatted i/o function in file handling.

Modules	Blooms level*	Number of hours
Module I: Overview of C++ What is Object Oriented Programming, Characteristics of OOP, Difference between C and C++. Basics:-Input/Output in C++ using cin/cout, Preprocessor Directives, Data Types-Integer, Float, character, Enumerations, library functions, comments, storage classes, manipulators, operators in C++, scope resolution operator , memory management operator. arrays and strings .	L1 and L2	5
Module II: Classes and objects Functions: Simple functions, passing arguments to functions, returning values	L1, L2 and L3	7

Prof. (Dr.) Anil Kumar
Deputy Dean Academics

Manesar Gurgaon-122413

from functions, reference arguments, returning by reference, Overloaded functions, Inline functions, friend function, Structures and class. Classes and objects: A simple class, C++ objects as physical objects, objects as function arguments, returning objects from functions, static class data, array as class data member, array of objects.		
Module III: Inheritance Inheritance, Types of Inheritance, access modes – public, private & protected, Abstract Classes, Ambiguity resolution using scope resolution operator and Virtual base class, Constructors, Types of constructors, Destructors.	L2, L3 and L4	8
Module IV: Polymorphism Polymorphism, Type of Polymorphism – Compile time and runtime, Function Overloading, Operator Overloading (Unary and Binary) Polymorphism by parameter, Pointer to objects, this pointer, Virtual Functions, pure virtual functions	L2, L3 and L4	8
Module V: Files and Exception Handling and I/O Files and Streams: streams, string I/O, character I/O, file pointer, error handling, command line arguments. formatted and Unformatted Input output, Introduction of Exception handling, Try Catch block, Rethrowing an Exception.	L2, L3 and L4	8

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

IFT2314	OPERATING SYSTEM	L	T	P	C
Version 2017.1	Date of Approval: 14 June, 2017	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

To study and apply concepts relating to operating systems, such as concurrency and control of asynchronous processes, deadlocks, memory management, processor and disk scheduling, parallel processing, and file system organization and Demonstrate an understanding of the differences between processes and threads, the different process or thread synchronization methods and the, the different memory management techniques used in Operating Systems, the different I/O management techniques used in Operating Systems, the tradeoffs in design and implementation concepts used in the development of Operating Systems.

Course Objectives

The objective of this course is to

- Equip the students with the knowledge about categories of operating systems and their functions.
- Provide detailed knowhow about functions of operating system like process, memory and device management along with file system security and protection.

Course Outcomes

On completion of this course, the students will be able to

- CO1: Define and explain operating systems and their evolution also differentiate among its various types.
- CO2: Explain concepts of process and inter-process communication and synchronization. Identify solutions to detect, prevent and handle deadlocks occurring in the operating systems. Solve synchronization and CPU scheduling problems related to processes.
- CO3: Define and explain concepts of memory management like fragmentation, paging and segmentation. Solve problems related to memory management using page replacement algorithms.
- CO4: Describe the concepts of device management and list various disk allocation methods. Determine solutions for disk scheduling problems using available disk scheduling algorithms.
- CO5: State the concept of file and file system security, also distinguish among various file allocation methods.

Modules	Blooms level*	Number of hours
MODULE 1: INTRODUCTION AND SYSTEM STRUCTURE What is an operating system, History of OS, OS concepts, Types of OS, OS Structure, OS Operations. System calls, Types of System Calls, System Programs, OS Structure, Virtual Machines, System Boot	L1, L2 and L4	6
MODULE 2: PROCESS MANAGEMENT Process Concept, Process Scheduling, Scheduling Criteria, Scheduling Algorithms, Overview of Thread Scheduling and Multiprocessor scheduling, Operations on Processes, Interprocess communication with example. Client-server Communication, Overview of Multithreaded programming models	L1, L2 and L3	6

Prof. (Dr.) Anil Kumar

Registrar
Amity University Haryana
Manesar Gurgaon-122413

MODULE 3: PROCESS COORDINATION Overview of Process Synchronization, Critical Section Problem, Semaphores, Classic problems. Deadlock- Prevention, Avoidance, Detection, Recovery, Algorithms	L1, L2 and L3	6
MODULE 4: MEMORY MANAGEMENT Memory Management Strategies-Introduction, Swapping, Contiguous Memory Allocation, Paging, Segmentation, Virtual Memory Management-Demand Paging, Thrashing, Page Replacement	L1, L2 and L3	6
MODULE 5: STORAGE MANAGEMENT Overview of File System, Access Methods, Directory and Disk Structures, File Sharing, Protection, Disk Scheduling, Disk Management, I/O hardware	L1 and L2	6
MODULE 6: PROTECTION AND SECURITY Goals and Principles of Protection, Access Matrix, Security Problem, Program Threats, System and Network Threats, Overview of Cryptography, Overview of User Authentication and Security Defense.	L1 and L2	6

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5:Synthesis, L6:Evaluation

IFT2319	SOFTWARE ENGINEERING	L	T	P	C
Version 2017.1	Date of Approval: 14 June, 2017	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The purpose of this course is to acquaint students with the concepts and methods available for software development in industrial environments. Students will be exposed to a variety of topics such as design notations, costing techniques, and testing methods, as well as to the tools, which are available to support software specification, design, testing, and maintenance.

Course Objectives

The objective of this course is to
