

WATER CONSCIOUS PLANTS

Water is necessary for the survival of all flora. Drought-tolerant plants, on the other hand, are those that require very little regular water supply to thrive.

Due to their adaptation, drought-tolerant plants are those that can go for months or even years without any outside moisture. Because different terrestrial regions experience different weather patterns and conditions, plants in drought-prone areas have adapted to withstand the harsh climate of thriving without water.

Amity University Haryana enhances environmental sustainability by employing water-efficient plant landscaping. Campus is home to a wide variety of water-conscious trees and plants, which helps with water conservation. There are innumerable trees and other plants of this kind on campus.

Snake Plant

CamphoraTree

Lawsonia Inermis

Bayleaf

Lemon Grass

Aloe Vera

A handwritten signature in blue ink, appearing to be 'Mansur' with a subscript '2'.
