

### PROMOTING CONSCIOUS WATER USAGE

The university is taking steps to encourage responsible water use through its Environment and Sustainability Policy. Posting signs and pamphlets in restrooms and drinking water cooler areas is an effective way to raise awareness and promote responsible water usage among students, faculty, and staff. Such initiatives can include tips on water conservation, information on the importance of saving water, and guidelines on how to reduce water wastage.

Promoting sustainability and responsible resource use within educational institutions can have a positive impact, as it not only reduces water consumption but also instills environmentally conscious habits in the university community. It sets an example for students and staff to be more mindful of their environmental footprint and contribute to the broader goals of sustainability and conservation.
