| Unit III: The Households                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 27 |
| <ul> <li>Utility Analysis -cardinal and ordinal approaches, Cardinal Approach- Law of Diminishing Marginal Utility, Law of Equi-Marginal Utility, Indifference curves- Concept, Properties, Different shapes</li> <li>The consumption decision - budget constraint, consumption and income/price changes, demand for all other goods and price changes; description of preferences (representing preferences with indifference curves); properties of indifference curves; consumer's optimum choice; income and substitution effects: Hicks and Slutsky Approach- Compensating Variation and Equivalent Variation.</li> </ul>                                                            |    |
| Unit IV: The Firm and Perfect/ Imperfect market structure; Input Markets                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 27 |
| <ul> <li>Behavior of profit maximizing firms and the production process; short-run costs and output decisions; costs and output in the long-run</li> <li>Monopoly and anti-trust policy; government policies towards competition; imperfect competition</li> <li>Labour and land markets: Basic concepts (derived demand, productivity of an input, marginal productivity of labour, marginal revenue product); demand for labour; input demand curves; shifts in input demand curves; competitive labour markets; labour markets and public policy.</li> </ul>                                                                                                                           |    |

**Course Learning Outcomes:** By the end of the course student will be able to critically assess current and future metrics, research technologies, and research data output related to the subject.

- Develop an understanding of microeconomics concepts and explanations.
- Assess diverse situations of demand and supply as they impact a business.
- Analyze the characteristics of perfect and imperfect markets with their relevance.
- Evaluate the impact of microeconomics on individual decision making as consumers & producers.

### **Course Learning Outcomes:**

The course hones and upgrades the mathematical skills acquired in school. The course:

- Provides the mathematical foundations necessary for further study of a variety of disciplines including economics, statistics, computer science, finance and data analytics.
- Explains applications wherever optimization techniques are used in business decision-making
- Increases understanding of the tools necessary for an analyst profile.
- Makes the student more logical in making or refuting arguments.

**Course Learning Outcomes:** By the end of the course student will be able to critically assess current and future metrics, research technologies, and research data output related to the subject.

• Develop an understanding of functions and theories of Money

- Assess role of financial institutions, markets, instruments and financial innovations in Indian financial system.
- Analyze the interest rates determination, related theories and current prevailing interest rates in India.
- Evaluate the role of banking system and central banks and monetary policy.

|-----------------------------------------------------------------------------------------------------------------|------------------|
| Unit-1 Introduction to the course:                                                                              | 9                |
| How can the representation and analysis of data help us study real-world problems. Publicly available data sets |                  |
| Unit-2- Using Data                                                                                              | 9                |
| Available statistical software, steps in data storage, organization and cleaning.                               |                  |

| Unit-3- Visualization and Representation                         | 9 |
|------------------------------------------------------------------|---|
| Alternative forms of presenting summarizing and presenting data  |   |
| Unit-4-Techniques and Tests                                      | 9 |
| Simple estimation techniques and tests for statistical inference |   |

## Course Learning Outcomes: At the end of this course, the students will be able

- To develop the understanding basic concepts of data representation and analysis.
- To use data simulations and publicly available data sources to help students learn about data types, their organization and visual representation.
- To analyze the techniques and tests used for statistical inferences of data.
- To enhance the analytical skills which are applicable in Business Organizations.

| social communication: small talk and building rapport, barriers in communication.                                                                                                                                                                                                                                                                                                                                                                                                                      |   |
| Unit II: Communication Types                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 5 |
| Verbal communication: Oral Communication: Forms, Advantages & Disadvantages, Written Communication: Forms, Advantages & Disadvantages, Introduction of Communication Skills (Listening, Speaking, Reading, Writing), Nonverbal communication: functions and effective use, KOPPACT(Kinesics, Oculesics, Proxemics, Para-language, Artifacts, Chronemics, Tactilics). The implication of appropriate communication; effective ways of using social media, importance of digital literacy.               |   |
| Unit III: Reading and Writing Skills                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 4 |
| Significance of reading; Reading Comprehension, gathering ideas from a given text, identify the main purpose and context of the text, evaluating the ideas, interpretation of the text, Paragraph development; essay writing.                                                                                                                                                                                                                                                                          |   |
| Unit IV: Speaking and Presentation Skills                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 5 |
| Speaking skills: fluency, vocabulary, grammar, and pronunciation; effective speaking: selection of words, your voice, and non-verbal communication, functions of speaking: interaction, transaction, and performance; structuring the message; effective speaking strategies. Planning, preparation, practice, and performance; audience analysis, audio-visual aids, analyzing the non-verbal communication, methods of delivery: impromptu, extemporaneous, memorization, manuscript, and outlining. |   |

## **Course Learning Outcomes:**

- Students will be able to understand the basic processes of communication, both verbal as well as non-verbal—nature, scope, and power of communication processes.
- Students will be able to demonstrate cultural sensitivity in communication and appreciation of cultural variations of diverse socio-cultural contexts.
- Students will be able to develop an awareness of the role of mass media in shaping public psyche, beliefs, and perceptions about social realities and build an informed and critical perspective.
- Students will be able to analyze situations and audiences to make right choices about the most effective and efficient ways to communicate and deliver messages.

• Students will be able to assess various barriers in communication and develop communicative competence thereby for effective communication.

| Interrogative sentences (W-Fragen)                                                                                                                         |   |
| The Family, Work-life and Professions (Familienmitglieder und                                                                                              |   |
| Berufe) Vocabulary: Professions and conjugation of the verb 'sein'                                                                                         |   |
| Introduction to simplepossessive pronouns with the help of the verb                                                                                        |   |
| 'haben' Usage of possessive pronouns. Interrogative sentences (W-                                                                                          |   |
| Fragen) W-Fragen: who, what, where,                                                                                                                        |   |
| when, which, how, how many, how much, etc. Exercises on the question                                                                                       |   |
| pronouns                                                                                                                                                   |   |

**Course Learning Outcomes:** At the end of this course, the students will be able to express themselves in writing and orally in basic German. This course content focuses on the speech of the students in a lucid and a concurrent manner using appropriate vocabulary and pronunciation techniques. Extra stress will be given on their understanding of grammatical structures and the foreign accent of the language. At the end of the course, the student shall be able to:

| Understand information; Express in his own words; Paraphrase; Interpret and translate. |
|----------------------------------------------------------------------------------------|
| Apply information in a new way in a practical context                                  |
| Analyse and break-down information to create new ideas                                 |
| Evaluate and express opinion in a given context                                        |

**Course Learning Outcomes:** At the end of this course, the students will be able to express themselves in writing and orally in basic French. This course content focuses on the speech of the students in a lucid and a concurrent manner using appropriate vocabulary

and pronunciation techniques. Extra stress will be given on their understanding of grammatical structures and the foreign accent of the language. At the end of the course, the student shall be able to:

- Understand information; Express in his own words; Paraphrase; Interpret and translate.
- Apply information in a new way in a practical context
- Analyse and break-down information to create new ideas
- Evaluate and express opinion in a given context

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Lecture Hours |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| Unit-1- Multidisciplinary nature of environmental studies                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 4             |
| Multidisciplinary nature of environmental studies: Definition, scope and importance; components of environment – atmosphere, hydrosphere, lithosphere and biosphere. Concept of sustainability and sustainable development.                                                                                                                                                                                                                                                                                                                                                                          |               |
| Unit-2-Ecosystems                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 5             |
| Ecosystem: What is an ecosystem; Structure and function of an ecosystem; Energy flow in the ecosystem; Food chains, food webs and ecological succession. Case studies of the following ecosystems:  Forest ecosystem  Grassland ecosystem                                                                                                                                                                                                                                                                                                                                                            |               |
| Desert ecosystem Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |               |
| 7 iquatio ecosystems (ponas, streams, takes, mers, occaris, estaunes).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |               |
| Unit-3- Natural Resources                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 4             |
| Natural resources: Land resources and land use change, land degradation, soil erosion and desertification. Deforestation: causes and impacts due to mining, dam building on environment, forests, biodiversity and tribal population. Water Resources-Use and over-exploitation of surface and groundwater, floods, drought, conflicts over water (international and inter-state). Heating of earth and circulation of air; air mass formation and precipitation. Energy resources- renewable and non-renewable energy sources, use of alternate energy sources, Growing energy needs, Case studies. |               |
| Unit-4- Biodiversity and its conservation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 5             |
| Biodiversity: Levels of biological diversity: genetic, species and ecosystem diversity; Biogeographic zones of India; biodiversity patterns and global biodiversity hot spots.                                                                                                                                                                                                                                                                                                                                                                                                                       |               |
| India as a mega-biodiversity nation; endangered and endemic species of India.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |               |
| Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts, biological invasions; conservation of biodiversity: <i>in-situ</i> and <i>ex-situ</i> conservation of biodiversity.                                                                                                                                                                                                                                                                                                                                                                                             |               |
| Ecosystem and biodiversity services: ecological, economic, social, ethical, aesthetic and information value.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |               |

Course Learning Outcomes: At the end of this course, the students will be able to develop:

- Appreciate the multi-disciplinary nature of environmental science
- Understand natural resources and evaluate limitations surrounding renewable and non-renewable resources
- Understand the nuances of ecosystem and learn about behaviour of various ecosystem
- Learn about the types, services and threats to our biodiversity and importance of conserving it.

### **Course Learning Outcomes:**

- 1. The course provides the mathematical foundations necessary for further study of a variety of disciplines including postgraduate economics, statistics, computer science, finance and data analytics.
- 2. The analytical tools introduced in this course have applications wherever optimization techniques are used in business decision-making for managers and entrepreneurs alike. These tools are necessary for anyone seeking employment as an analyst in the corporate world.

| Unit IV: The closed economy in the short run                                                                                                                                                                                                                                                                                                                                                                                               | 26 |
| <ul> <li>Schools of macroeconomic thought: Classical, Keynesian, New – classical and New Keynesian</li> <li>Classical and Keynesian systems</li> <li>Keynesian model of income determination; IS-LM model; fiscal and monetary policy</li> </ul>                                                                                                                                                                                           |    |

**Course Learning Outcomes:** By the end of the course student will be able to critically assess current and future metrics, research technologies, and research data output related to the subject.

- 1. Develop an understanding of macroeconomics concepts and explanations.
- 2. Enable students to understand and comment upon real economic issues like inflation, money supply, GDP and their inter- linkages.
- 1. Critically evaluate various macroeconomic policies in terms of a coherent logical structure and appraise economic issues and public policy by using economic models.

### **Course Learning Outcomes:**

The course develops critical analytical skills and exposes students to understanding the intricacies of India's economic, political and social developments both in the past and present times. It increases their employability by enhancing their ability to deal with a variety of textual and statistical sources, and to draw upon them to construct a coherent argument. These skills would be useful in a variety of careers in academics, research, journalism and the government

| Towards communicative competence; choosing the appropriate channel and medium of communication; ways to develop communication skills in the areas of Listening, Speaking, Reading, and Writing.                         |                  |
| Unit II: Communication Types                                                                                                                                                                                            | 4                |
| Nonverbal communication: detailed analysis, KOPPACT (Kinesics, Oculesics, Proxemics, Paralanguage, Artefacts, Chronemics, Tactilics).                                                                                   |                  |
| Unit III: Communication and Technology                                                                                                                                                                                  | 5                |
| Importance of digital literacy and communication on digital platforms.                                                                                                                                                  |                  |
| Unit IV: Presentation Skills                                                                                                                                                                                            | 4                |
| Planning, preparation, practice, and performance; audience analysis, audiovisual aids, analyzing the non-verbal communication, methods of delivery: impromptu, extemporaneous, memorization, manuscript, and outlining. |                  |

## **Course Learning Outcomes:**

• Students will be able to understand the basic processes of communication, both verbal as well as non-verbal—nature, scope, and power of communication processes.

- Students will be able to demonstrate cultural sensitivity in communication and appreciation of cultural variations of diverse socio-cultural contexts.
- Students will be able to develop an awareness of the role of mass media in shaping public psyche, beliefs, and perceptions about social realities and build an informed and critical perspective.
- Students will be able to analyze situations and audiences to make right choices about the most effective and efficient ways to communicate and deliver messages.
- Students will be able to assess various barriers in communication and develop communicative competence thereby for effective communication.

Course Learning Outcomes: By the end of the course student will be able to critically assess current and future metrics, research technologies,

and research data output related to the subject.

- Develop an understanding of basic elements of consumer theory.
- Assess diverse situations of production theory.
- Analyze the functioning of perfectly competitive market.
- Evaluate the impact of microeconomics on individual decision making as consumers & producers.

#### **Course Learning Outcomes:**

- This course enables students to analyse the macroeconomic performance of various countries using formal analytical tools.
- It also allows them to evaluate important macroeconomic policies and their implications on economy.

**Course Learning Outcomes:** By the end of the course student will be able to critically assess current and future metrics, research technologies, and research data output related to the subject.

- Clear understanding of the key concepts and principles of statistics
- Estimate population parameters based on random samples and test hypotheses about these parameters
- Knowledge relating to data analysis techniques, data visualization over a period of time.

### Course Learning Outcomes: At the end of this course, the students will be able to

- Understand the importance and types of research.
- Comprehend with various research designs and data collection techniques.
- Appraise with various sampling procedures and analyze data through various techniques.

| International financial markets                                                                                                     |             |
| Unit 4 : Fiscal and monetary policy                                                                                                 | 26          |
| Economic stability through expansionary and tight monetary policy                                                                   |             |
| Economic stability through discretionary and non-discretionary fiscal policy                                                        |             |
| Active or passive; monetary                                                                                                         |             |

- Policy objectives and targets; their trade-off and Tinbergen's fixed target approach
- Rules versus discretion: Time consistency;
- The government budget constraint;
- Government debt and Ricardian equivalence

### **Course Learning Outcomes:**

- This course will enable students to combine their knowledge of the working of the macroeconomy with long run economic phenomena like economic growth, technological progress, R&D and innovation.
- It will also enable students to understand business cycles and the concomitant role of policies.

| Unit II: | Simple and Multiple Regression Models                                                                                                                                                                                                                                                              | 26      |
| •        | Estimation of model by method of ordinary least squares;                                                                                                                                                                                                                                           |         |
| •        | properties of the least squares estimators (BLUE properties),                                                                                                                                                                                                                                      |         |
| •        | the Gauss-Markov theorem.                                                                                                                                                                                                                                                                          |         |
| •        | Goodness of fit-R2& Adjusted R2                                                                                                                                                                                                                                                                    |         |
| •        | Tests of hypotheses;                                                                                                                                                                                                                                                                               |         |
| •        | confidence intervals.                                                                                                                                                                                                                                                                              |         |
| Unit III | : Econometric Problems                                                                                                                                                                                                                                                                             | 28      |
| •        | Relaxing the Assumptions Multicollinearity: Nature, Consequences, Detection and Remedial measures of the problems Heteroscedasticity: Nature, Consequences, Detection and Remedial measures of the problems Autocorrelation: Nature, Consequences, Detection and Remedial measures of the problems |         |
| Unit IV  | : Specification Errors                                                                                                                                                                                                                                                                             | 28      |
| •        | Tests of Specification and misspecification Omission of a relevant variable; Inclusion of irrelevant variable; Errors of measurement in dependent and independent variables. Model Selection Criteria.                                                                                             |         |

#### Course Learning Outcomes: By the end of the course student will be able to

- Comprehend the nature and scope of econometrics and development of regression models and the estimation methods.
- Identify the problems which may arise in the error term and the corresponding remedial measures for the same.
- Analyze econometric models to explain certain economic relationships and their implementation for drawing inferences for the same.
- Develop among the judgement of the model specification for econometric estimation.

### Course Learning Outcomes: By the end of the course student will be able to

- Acquire the fundamental understanding of nature and significance of Environmental Economics.
- Examine various solutions to environmental problems.
- Appraise the matters relating to international environmental problems.
- Develop fundamental understanding of pollutants that travel across country boundaries and how environmental regulations affect trade flows

| Unit-4                                      | -Ethics and Data Analysis                                                                                                                                                                             | 9                |
| •                                           | Ethics and scientific integrity: Standards of conduct, privacy in data Data Analysis: Tabulation of Data & Data Preparation, Descriptive statistics, Correlation, Regression, Report Writing.         |                  |

Course Learning Outcomes: At the end of this course, the students will be able to

- Understand the importance and types of sampling.
- Comprehend with various probability sampling and data collection techniques.

- Appraise with data analysis through various techniques.Execute report writing and presentation of results.

**Course Learning Outcomes:** At the end of the course, a student should be able to understand the development paradigm adopted in India since independence and evaluate its impact on economic as well as social indicators of progress and well-being.

## **List of Professional Skill Development Activities (PSDA):**

- 1. Understand the development paradigm adopted in India since independence and write a Term assignment.
- 2. Write a seminar paper on evaluate India's development strategy during post-independence period and its impact on economic as well as social indicators of progress and well-being

# **Course Learning Outcomes:**

• This course introduces students to the basics of development economics, with in-depth discussions of the concepts of development, growth, poverty, inequality, as well as the underlying political institutions

- Testing Casuality in Economics: Granger Causality Test.
- Stationarity, Test of Stationarity, Spurious Regression, Unit Roots, Dickey-Fuller
- Test, Cointegration, Engle Granger Test.
- Forecasting: AR, MA and ARIMA processes, Box Jenking Methodology.
- Vector Auto Regression (VAR) Model, Introduction, Formulation, Estimation and Problems.

#### **List of PSDA Activities:**

- 1. Every student to present simultaneous equation modelling.
- 2. Each student to submit an analysis of Time series and panel data.

Course Learning Outcomes: By the end of the course student will be able to

- Initiate effective use of econometrics for economic problems through regression analysis.
- Have theoretical and practical understanding of time series data
- Have theoretical and practical understanding of panel data
- Develop analytical abilities among students for data handling and econometric modelling.

| Unit 1: Analysing Social Change in Historical Perspective                                                               | 28            |
| Political Economy: Concept and evolution, Brief understanding of Political economy approach;                            |               |
| <ul> <li>Historical Materialism: Concept and theory, The method of historical materialism and its Criticism;</li> </ul> |               |
| Pre-communism to Slavery, Disintegration of slavery                                                                     |               |
| Feudalism, The transition from feudalism to capitalism;                                                                 |               |
| Unit 2 :Capitalism as an Evolving Economic System                                                                       | 26            |
| Capitalism: Basic features; Capitalism as a historical process – alternative perspectives                               |               |
| Accumulation and crisis;                                                                                                |               |
| Monopoly capitalism— alternative perspectives                                                                           |               |
| Unit 3 :The State in Capitalism                                                                                         | 26            |
| The state and the economy – contestation and mutual interdependence; the state as an arena of conflict                  |               |
| • Imperialism – the basic foundations; Imperialism and the classes; Imperialism and the states, Limits of Imperialism   |               |
| The making of socialist consciousness                                                                                   |               |
| Unit 4 : Changing Dynamics of Capitalist Production                                                                     | 28            |
| Capitalist development in the pre-Second World War period,                                                              |               |
| The 'Golden Age' and later                                                                                              |               |
| Organisational Form and Labour Process: Fordist and Post-Fordist production                                             |               |
| <ul> <li>The changing dynamics of the organisation of production, markets and labour process</li> </ul>                 |               |

- The evolution of the multinational corporations and their economic logic
- The contemporary forms value chain networks and forms of inter-firm governance
- The changing nature of employment, job security and labour rights

## **List of Professional Skill Development Activities (PSDA):**

- 1. Students learn to assimilate from a diverse range of opinions and crystallize their own thought processes and standpoints. This also helps them to develop advanced writing, presentation and research skills.
- 2. The course further enables them to comprehend a larger view of the world around us by analysing the existing social and political structures and their links with the economic processes.

#### **Course Learning Outcomes:**

- To develop critical thinking by exposing them to elements of economic thought, juxtaposing ideas and theoretical structures based largely on original texts and journal articles.
- It exposes the social science dimension of economics to the students.
- Provides them skills to think and analyse in an interdisciplinary manner.
- Enables the students for pursuing studies in diverse related areas such as development studies, economic sociology, critical geography, gender studies.
- It prepares the students to face the practical world of work, where economics, business, civil society organisations, social institutions and politics often cohabit in a complex interlinked structure

- Globalisation in historical perspective;
- The economics and politics of multilateral agreements
- Trade, production patterns and world inequality
- · Financial instability in a globalised world

## List of Professional Skill Development Activities (PSDA):

- 1. Capable to understand India's various development issues from a comparative perspective and creatively articulate them in the form of newspaper article or publish in other electronic media.
- 2. Critically analyse the globalisation and development process and present a seminar paper

**Course Learning Outcomes:** This course teaches the student various aspects of the Indian economy, as well as important themes relating to the environment and sustainable development. It also introduces them to some issues of globalisation.

- Clear understanding of the relation between population and process of development
- Analyze the particular problems of underdeveloped countries.
- Critically appraise the role of globalization and process of development

## List of PSDA Activities:

- Every student to present a case study with respect to bounded rationality
   Each student to submit a report on instances of bounded rationality from their personal experiences.

Course Learning Outcomes: By the end of the course student will be able to

Understand the methodological approach in behavioural economics and contrast it with standard economic models.

Understand the psychological dimensions such as cognition, moral motivations and social interactions in explaining economic behaviours and outcomes

#### List of PSDA Activities:

- 1. Every student to present an analysis absolute and comparative advantage trade principles..
- 2. Each student to submit an in-depth analysis of different instruments of trade policy.

**Course Learning Outcomes:** By the end of the course student will be able to critically assess current and future metrics, research technologies, and research data output related to the subject.

- Establish their understanding of the economic concepts of trade theory
- Demonstrate and compare the economic welfare effects of free trade and protection
- Analyze the usefulness and problems related to topics in international trade
- Project their critical understanding of trade policies.

# **Course content and syllabus**

## **Unit 1: Economic Survey- Some Aspects**

- State of the Economy
- India's Medium term growth outlook
- Fiscal Development
- Monetary Management and Financial Intermediation
- Prices and Inflation

# Unit 2: Economic Survey-Infrastructure and Environment

Social Infrastructure and Employment

Physical and Digital Infrastructure

Climate Change and Environment

## **Unit 3 : Policy Initiatives**

- Agriculture and Food Management
- Industry
- Services

#### Unit 4: External Sector and Stock market

- FDI Status and Issues in India
- Permanent Residency Status for Foreign Investors
- WTO Reforms and India's Stance
- Reforms in IMF Quota
- Indian Stock market and fluctuations in the Stock market in post Covid period.

## **List of Professional Skill Development Activities (PSDA):**

1. Able to understand government policies and will in general be informed participants in economic decision making and write a Term assignment about the recent State/Central Budget.

## **Course Learning Outcomes:**

• By the end of the course Students will be able to understand government fiscal policies and will be able to participate in the discussion on Economic survey and Union and State Budgets.

**Course Learning Outcomes:** At the end of the course, a student should learn the role of health and education in human development. Expand R by installing R packages

- a. Explore and understand how to use the R documentation
- b. Read Structured Data into R from various sources
- c. Understand basic linear functions in models

d. Understand how to link data, statistical methods, and actionable questions

| Education sector in India: An overview                     |    |

Course Learning Outcomes: At the end of the course, a student should learn the role of health and education in human development.

- They will be able to apply economic theory to understand the demand for health care, market failure in health insurance, economic evaluation of health care programmes and the role of public policy in the healthcare industry.
- They will also learn to analyse the returns to education, its role in labor market signalling, and the progress of schooling in India.
- They will also be exposed to the theories of discrimination.

Financialisation of the global economy – trends, instruments, features and consequences

## **List of Professional Skill Development Activities (PSDA):**

- 1. Students learn to assimilate from a diverse range of opinions and crystallize their own thought processes and standpoints. This also helps them to develop advanced writing, presentation and research skills.
- 2. Students from all backgrounds will be able to better prepared to face the professional world and can use the knowledge base of this course for facing the challenges of group discussions and general interviews for corporate or civil service jobs.

# Course Learning Outcomes: By the end of the course student will be able to

- Initiate effective use of econometrics for economic problems through regression analysis.
- Have theoretical and practical understanding of time series data
- Have theoretical and practical understanding of panel data

• Develop analytical abilities among students for data handling and econometric modelling.

## **List of Professional Skill Development Activities (PSDA):**

- 1. Students will come to recognise the law as an important organising force that influences the actions of private citizens as well as government agencies and write a term paper on empirical law and economics
- 2. Participating this course students will be able to make critical thinking and an inter-disciplinary approach towards the law, economics, and policymaking and write a seminar paper about one relevant topic in this domain.
