Job Description

The role is for Patent Analyst in the Intellectual Property (IP) –The role requires a high level of technical, analytical, reasoning and writing skills with excellent eye for detail. The ideal candidate will have an innate curiosity for understanding how technology operates in various domains with particular expertise in at least one domain. The candidate will have to learn legal

concepts related to IP and will have to apply his technical skills in the legal domain. The job functions include:

- Understanding or grasping the technological concepts / key features of inventions.
- Conducting patent prior art searches including prior art analysis in the relevant patent and non patent databases to establish the novelty of the invention.
- Drafting patent specifications in various disciplines of science / engineering/technology.
- Developing arguments with convincing reasons for establishing patentability of the invention.
- Assisting senior team members in research work including case-laws research, business research, and technical research.
- Assisting with procedural aspects of filing patent application and patent prosecution.
